Mr. David W. Gibson, Executive Officer
California Regional Water Quality Control Board
San Diego Region
2375 Northside Drive, Suite 100
San Diego, CA 92108-2700

Dear Mr. Gibson:

COUNTY OF SAN DIEGO, PERMIT R9-2013-0001, PIN 255223 – DELIVERABLE IN RESPONSE TO PROVISION F.2.A, JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM DOCUMENT UPDATE

The County of San Diego is pleased to submit the attached updated Jurisdictional Runoff Management Program (JRMP) document in accordance with requirements set forth in Provision F.2.a.(5) of Order R9-2013-0001, the National Pollution Discharge Elimination System (NPDES) Permit and Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer Systems (MS4s) Draining the Watersheds within the San Diego Region, NPDES No. CAS0109266 (Permit).

The updated JRMP document will also be made available on the Regional Clearinghouse. The document includes an Introduction which outlines a summary of modifications.

If you have any questions or comments, please contact me at (858) 694-3672 or via email at Todd.Snyder@sdcounty.ca.gov

Sincerely,

A handwritten signature in black ink, appearing to read "Todd Snyder".

TODD E. SNYDER, Manager

Jurisdictional Runoff Management Program

1.0 INTRODUCTION AND EXECUTIVE SUMMARY

The County of San Diego (County) has prepared this Jurisdictional Runoff Management Program (JRMP) in compliance with San Diego Regional Water Quality Control Board (Regional Board) Order R9-2013-0001 (2013 MS4 Permit). The 1987 amendments to the Federal Water Pollution Control Act (also known as the Clean Water Act, or CWA) established a framework for regulating Municipal Separate Storm Sewer System (MS4) discharges under the National Pollutant Discharge Elimination System (NPDES). In 1990, the Regional Board issued Order No. 90-42, a regional NPDES permit for urban stormwater discharges from the jurisdictions in the urbanized portions of San Diego County. The MS4 Permit has been revised in February 2001, January 2007, and May 2013. The 2013 MS4 Permit requires each Copermittee to develop a Jurisdictional Runoff Management Program. The JRMP includes management measures to prevent discharges to the MS4 and receiving waters.

This version replaces the former County JRMP (previously “JURMP”) in response to the 2013 MS4 Permit and is set forth to meet all applicable requirements. The most notable new requirements impacting the County JRMP relate to:

1. Wider applicability and more stringent structural Best Management Practices (BMP) for new and redevelopment areas
2. Increased frequency and location for dry weather outfall monitoring
3. Integration of the JRMP with the strategies identified in the Water Quality Improvement Plans (WQIPs)

In addition to meeting new regulatory standards, the former JRMP has also been:

1. Re-organized to follow the 2013 MS4 Permit and to provide better utility to County staff as a day to day reference document. The commercial, industrial, and municipal elements have been grouped together under the all-encompassing chapter of “Existing Development.” Information on the County’s enforcement response plan (ERP) has been consolidated and is now in a stand-alone chapter. Previous guidance on the County’s Effectiveness Assessment Program have been separated into a stand-alone chapter and streamlined by referencing detailed guidance recently developed by the California Stormwater Quality Association (CASQA).
2. Updated to reflect current County ordinances, standards, department names, as well as organizational functions, names, etc.
3. Revised to increase efficiency in County operational practices and provide greater flexibility in focusing staff resources towards identifying, reducing, and eliminating stormwater pollution.

This updated JRMP document contains a description of the County's program as a whole. It is based on the most updated information available at the time it was prepared. Each year the County will submit a JRMP Annual Report to the Regional Board, and any changes to the JRMP will be noted in that document.

Jurisdictional Runoff Management Program

The purpose of this document is to present programs and strategies to reduce the discharge of pollutants from the MS4 and receiving waters to the maximum extent practicable (MEP). This entails improving existing programs and developing new programs intended to minimize or eliminate the effects of urban runoff from the County to the MS4 and receiving waters.

Jurisdictional Runoff Management Program

Jurisdictional Runoff Management Program

2.0 ADMINISTRATIVE AND LEGAL PROCEDURES

2.1 DEPARTMENTAL ROLES AND RESPONSIBILITIES

Personnel from a number of County departments and divisions are involved in the implementation of the County's Runoff Management Programs. Attachment 2.1 includes an overall organizational chart for the County and detailed charts for key departments. More specific descriptions of roles and responsibilities are also provided throughout this Jurisdictional Runoff Management Program (JRMP) as they pertain to the implementation of individual program elements.

2.2 LEGAL AUTHORITY

2.2.1 Certification of Legal Authority

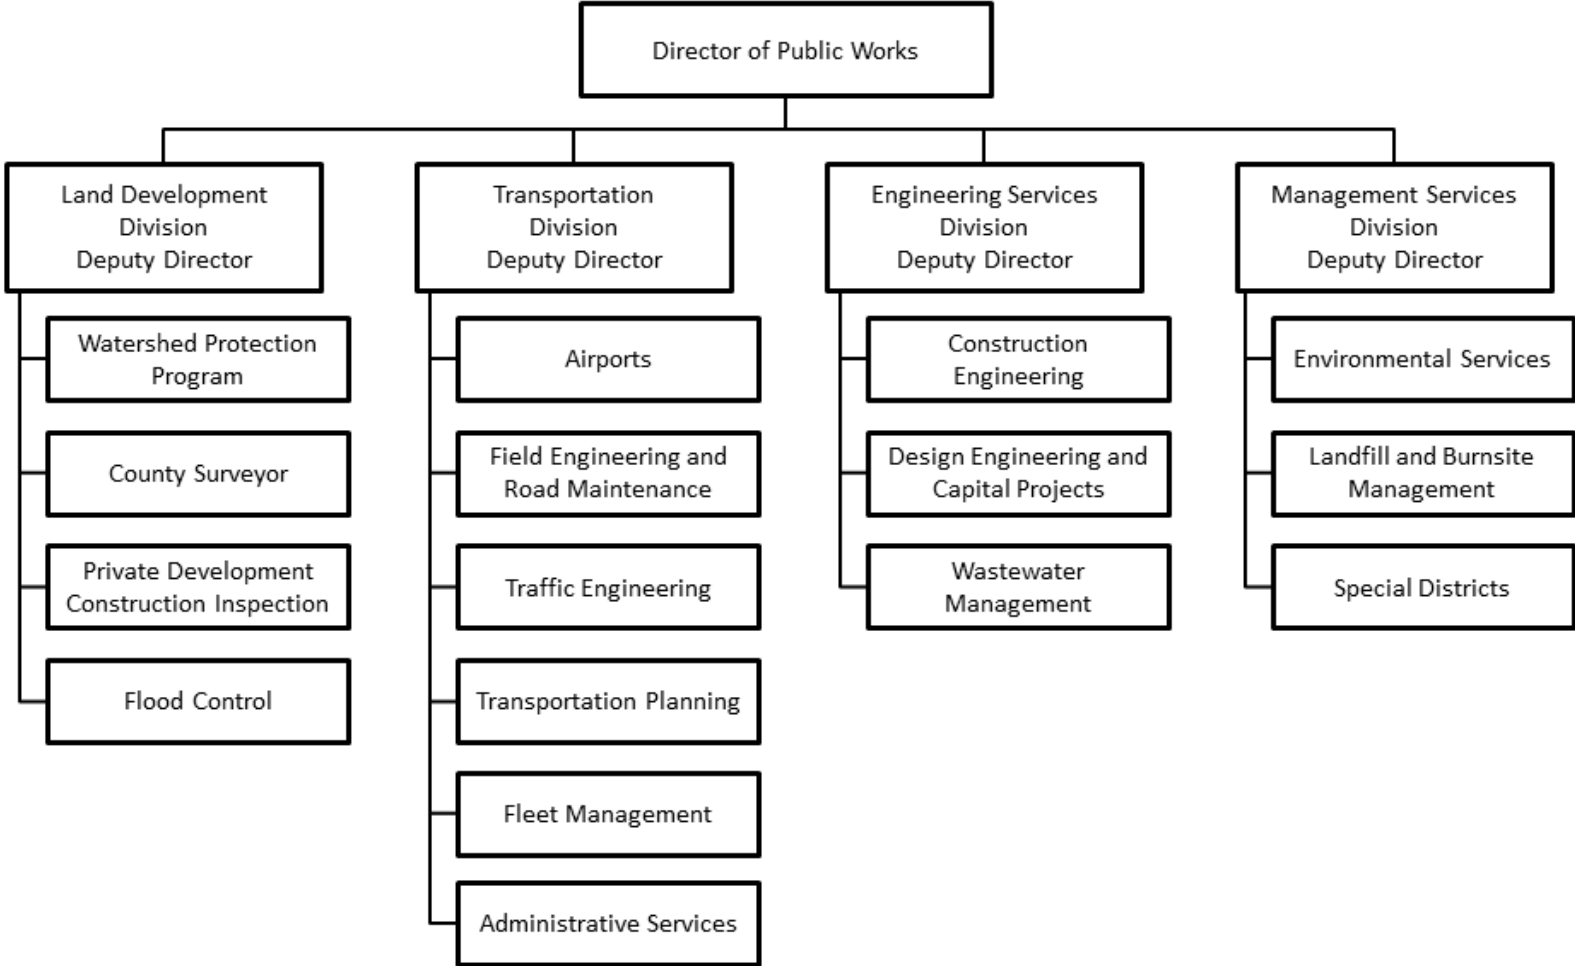

In compliance with Section E.1.a of Order No. R9-2013-0001 (Permit), the County has established adequate legal authority to implement and enforce the requirements contained in the Permit. The County has amended its Code of Regulatory Ordinances—Title 6, Division 7, Chapter 8 that contains the necessary language to implement its stormwater management and discharge control program in accordance with the Permit. An updated version of the County's Watershed Protection Ordinance is included as Attachment 2.2.

AN ORDINANCE TO AMEND SECTION 67.801 ET SEQ. OF THE SAN DIEGO COUNTY CODE OF REGULATORY ORDINANCES RELATING TO WATERSHED PROTECTION

The Board of Supervisors of the County of San Diego ordains as follows:

Section 1. The Board of Supervisors finds and determines that it is necessary to amend Title 6, Division 7, Chapter 8 of the San Diego County Code of Regulatory Ordinances relating to watershed protection, stormwater management and discharge control to ensure the County's ordinances enacted as part of its Jurisdictional Runoff Management Program implements California Regional Water Quality Control Board Order R9-2013-0001, NPDES No. CAS0109266, adopted by the California Regional Water Quality Control Board, San Diego Region, on May 8, 2013.

Section 2. Amend Chapter 8 (Sections 67.801 through and including 67.815) to read as follows:

SEC. 67.801. PURPOSE AND INTENT.

(a) The purpose of this Chapter is to protect water resources and to improve water quality by controlling the stormwater conveyance system and receiving waters; to cause the use of management practices by the County and its citizens that will reduce the adverse effects of non-stormwater and polluted stormwater discharges to the stormwater conveyance system and receiving waters; to secure benefits from the use of stormwater as a resource; and to ensure the County is compliant with applicable state and federal law and California Regional Water Quality Control Board Order No. R9-2013-0001, NPDES No. CAS0109266.

(b) The requirements of this Chapter are specifically intended to implement a Jurisdictional Runoff Management Program in accordance with California Regional Water Quality Control Board Order No. R9-2013-0001, NPDES No. CAS0109266. To the extent necessary to ensure compliance with this order, this Ordinance shall require the following:

- (1) Prohibit non-stormwater discharges to the stormwater conveyance system and receiving waters unless otherwise authorized by this Chapter.
- (2) Establish requirements to prevent and reduce pollution to water resources.
- (3) Establish requirements for development project site design to prevent non-stormwater discharges to the stormwater conveyance system and reduce stormwater pollution and erosion.
- (4) Establish requirements for the management of stormwater flows from development projects to prevent erosion and to protect and enhance existing water-dependent habitats.
- (5) Establish standards for the use of off-site facilities, when permissible, for stormwater management to supplement on-site practices at new development sites.
- (6) Establish notice procedures and standards for adjusting stormwater and non-stormwater management requirements, where necessary.

SEC. 67.802. DEFINITIONS.

Unless a different meaning is clearly intended and more protective of water quality under the circumstances, terms used in this Chapter shall have the same meaning as the same or equivalent term when defined in Attachment C of California Regional Water Quality Control Board Order No. R9-2013-0001, NPDES No. CAS0109266. For purposes of this Chapter subject to the foregoing limitation, the following definitions shall apply:

- (a) "Authorized enforcement official" means the Director of Public Works, the Director of Planning and Development Services, the Director of Environmental Health, the Agricultural Commissioner, Department of Agriculture, Weights and Measures, or their designees.
- (b) "Active/Passive Sediment Treatment" means using mechanical, electrical or chemical means to flocculate or coagulate suspended sediment for removal from runoff from construction sites prior to discharge.
- (c) "Authorized non-stormwater discharge" means a discharge allowed to enter the stormwater conveyance system or receiving waters in accordance with a permit under the National Pollutant Discharge Elimination System or as specifically authorized by this Chapter.
- (d) "Best management practices" (BMPs) shall have the same meaning as defined in the NPDES Order. Best management practices may include any type of pollution prevention and pollution control measure that achieves compliance with this Chapter.
- (e) "Biofiltration" means practices that use vegetation and amended soils to detain and treat runoff from impervious areas. Treatment is through filtration, infiltration, adsorption, ion exchange, and biological uptake of pollutants.
- (f) "BMP Design Manual" means the plan developed by the County in accordance with the NPDES Order to eliminate, reduce, or mitigate the impacts of water runoff from development projects and existing development. On acceptance by the RWQCB, the BMP Design Manual will supersede the Standard Urban Stormwater Mitigation Plan (SUSMP) developed pursuant to California Regional Water Quality Control Board Order No. R9-2007-001. Until superseded, the SUSMP shall be the BMP Design Manual.
- (g) "Detention" means the temporary storage of storm run-off in a manner that controls peak discharge rates and provides some gravity settling of pollutants.
- (h) "Detention facility" means a detention basin or alternative structure designed for the purpose of temporary storage of stream flow or surface run-off and gradual release of stored water at controlled rates.
- (i) "Development project" means construction, rehabilitation, redevelopment, land disturbance activity, or reconstruction of any public improvement projects or private projects.
- (j) "Discharge", when used as a verb, means to allow pollutants to directly or indirectly enter stormwater, or to allow stormwater or non-stormwater to directly or indirectly enter the stormwater conveyance system or receiving waters, from an activity or operations which one owns or

operates. When used as a noun, "discharge" means the pollutants, stormwater, or non-stormwater that are discharged.

(k) "Discharger" means any person or entity engaged in activities or operations or owning facilities, from which an allowed non-stormwater discharge to the stormwater conveyance system may or does originate or which will or may result in pollutants entering stormwater, the stormwater conveyance system, or receiving waters or the owners of real property on which such activities, operations or facilities are located, except that a local government or public authority is not a discharger as to activities conducted by others in public rights-of-way.

(l) "Environmentally sensitive area" or "ESA" means impaired water bodies, as defined by the federal Clean Water Act, Section 303(d), areas designated as Areas of Special Biological Significance or with the RARE beneficial use by the SWRCB in the Water Quality Control Plan for the San Diego Basin (1994 and amendments) and areas designated as preserves for species-protection purposes by the State of California or a local government.

(m) "Feasible" means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, and technological factors as determined in the sole discretion of the County. Feasibility may be limited in this Chapter to eliminate consideration of economic, environmental and other factors as, for example, where feasibility is specifically defined as technological feasibility.

(n) "Flow-thru treatment control BMPs" mean structural, engineered facilities that are designed to remove pollutants from stormwater runoff using treatment processes that do not incorporate significant biological methods. Examples include dry extended detention basins, sand filters, media filters, and vegetated swales.

(o) "Illicit connection" means any man-made conveyance or drainage system through which non-stormwater or pollutants in water, not authorized by an NPDES permit or the NPDES Order are discharged or may be discharged to the stormwater conveyance system.

(p) "Impervious surface area" means the ground area covered or sheltered by an impervious surface, measured in plan view. For example, the "impervious surface area" for a pitched roof is equal to the ground area it shelters, rather than the surface area of the roof itself.

(q) "Infiltration BMPs" mean structural measures that capture, store, and infiltrate stormwater runoff. These BMPs are engineered to store a specified volume of water and have no design surface discharge (underdrain or outlet structure) until this volume is exceeded. Infiltration BMPs may also support evapotranspiration processes, but are characterized by having their most dominant volume losses due to infiltration. They are a type of retention BMP.

(r) "Land disturbance activity" means any activity, whether or not a stormwater quality management plan or County permit or approval is required, that moves soils or substantially alters the land such as grading, digging, cutting, scraping, stockpiling or excavating of soil; placement of fill materials; paving, pavement removal, exterior construction; substantial removal of vegetation where soils are disturbed including but not limited to removal by clearing or grubbing; clearing or road-cutting associated with geotechnical exploration and assessment, percolation testing, or any

other activity that is a condition of a permit application; or any activity which bares soil or rock or involves streambed alterations or the diversion or piping of any watercourse.

(s) "Maximum extent practicable" (MEP) shall have the same meaning as defined in the NPDES Order.

(t) "Natural drainage" means a naturally occurring drainage consisting of native soils such as a natural swale or topographic depression which gathers or conveys run-off to a permanent or intermittent watercourse or water body.

(u) "Non-Stormwater" means all discharges to and from the stormwater conveyance system that do not originate from precipitation.

(v) "NPDES Order" shall mean and refer to California Regional Water Quality Control Board, San Diego Region Order No. R9-2013-0001, NPDES No. CAS00109266, as the same may be amended, modified or replaced from time to time.

(w) "Pollutant" means any agent that may cause, potentially cause or contribute to the degradation of water quality such that a condition of pollution or contamination is created or aggravated.

(x) "Pollutant Control BMP" (PC-BMP) means any engineered system designed to remove pollutants from stormwater by simple gravity settling of particulate pollutants, filtration, biological uptake, media absorption or any other physical, biological, or chemical process. They are also known as treatment control BMPs.

(y) "Pollution prevention" means the practices and processes that reduce or eliminate the generation of pollutants such as the use of smaller quantities of toxic materials or substitution of less toxic materials; changes to production processes to reduce waste; decreases in waste water flows; recycling of wastes as part of the production process; segregation of wastes, and treatment of wastes on site to decrease volume or toxicity.

(z) "Priority Development Projects" (PDPs) are new development and redevelopment projects that are subject to general, source control site design, pollutant control, and hydromodification management BMP requirements, and that must demonstrate compliance through a stormwater quality management plan to be approved by the County.

(aa) "Public improvement projects" means any project for the erection, construction, alteration, repair or improvement of any public structure, building, road, or other public improvement of any kind.

(bb) "Rainy season" means from October 1 through April 30.

(cc) "Receiving waters" shall mean waters of the United States.

(dd) "Redevelopment" means creation, addition, or replacement of impervious surface on an already developed site. Examples include the expansion of building footprints, road widening, the addition or replacement of a structure, and creation or addition of impervious surfaces. Replacement

of existing impervious surfaces includes any activity that is not part of a routine maintenance activity where impervious material(s) are removed exposing underlying soil during construction. Redevelopment does not include trenching and resurfacing associated with utility work, resurfacing existing roadways, new sidewalk construction, pedestrian ramps, or bike lane on existing roads; and routine replacement of damaged pavement, such as pothole repair.

(ee) “Residential discharger” means the occupant, owner, manager, caretaker, or owner’s association that owns, occupies or has responsibility for a discharge from a single-family dwelling, a multiple-family dwelling, mobile home park, condominium complex, board-and-care house, or other housing structure or portion of a residential development from which the discharge originated.

(ff) “Regional Water Quality Control Board” or “RWQCB” means the California Regional Water Quality Control Board for the San Diego Region.

(gg) “Source control BMP” means land use or site planning practices, or structural or nonstructural measures that aim to prevent runoff pollution by reducing the potential for contamination at the source of pollution. Source control BMPs minimize the contact between pollutants and runoff.

(hh) “Stormwater conveyance system” means private and public drainage facilities other than sanitary sewers within the unincorporated area of San Diego County by which water run-off may be conveyed to receiving waters, and includes but is not limited to roads, streets, constructed channels, aqueducts, storm drains, pipes, street gutters, inlets to storm drains or pipes, or catch basins.

(ii) “Stormwater Quality Management Plan” means a plan, submitted on a County form or in a County approved format with an application for a County permit or other County approval, identifying the measures that will be used for stormwater and non-stormwater management for a development project. There are two types of SWQMPs: a Standard SWQMP and a PDP SWQMP. A PDP SWQMP is required for all Priority Development Projects west of the Pacific/Salton Divide. Standard SWQMPs are required for all development projects east of the Pacific/Salton Divide and for all projects west of the Pacific/Salton Divide that are not Priority Development Projects.

(jj) “Stormwater pollution prevention plan” (SWPPP) means an approved site-specific plan that (1) identifies and evaluates sources of pollutants associated with activities that may affect the quality of stormwater discharges, (2) eliminates non-stormwater discharges, and (3) identifies and implements site-specific BMPs to reduce or to prevent pollutants in stormwater or retain non-stormwater discharges.

(kk) “Structural BMPs” are a subset of BMPs which detain, retain, filter, remove, or prevent the release of pollutants to surface waters from development projects in perpetuity, after construction of a project is completed. These BMPs can satisfy the requirements for Pollutant Control BMPs and Hydromodification BMP requirements for Priority Development Projects.

(ll) “SUSMP” or standard urban stormwater mitigation plan for land development projects and public improvement projects means the SUSMP adopted by the County Board of Supervisors on November 13, 2002 pursuant to California Regional Water Quality Control Board Order No. 2001-01, as it may thereafter be revised by the Director, Department of Public Works. The County BMP Design Manual will supersede the SUSMP pursuant to the NPDES Order.

(mm) "Treatment control BMPs" are also known as a Pollutant Control BMPs (PC-BMPs).

(nn) "Tributary to an impaired water body" means any facility or activity that is a tributary to an impaired water body because urban run-off from that facility or activity enters (1) the stormwater conveyance system at a place and in a manner that will carry pollutants for which that water body is impaired to the impaired water body; (2) a flowing stream that will carry pollutants for which that water body is impaired to the impaired water body; or (3) an ephemeral stream that reaches the impaired water body during storm events and that will carry pollutants for which that water body is impaired during such storm events.

(oo) "Water quality standards" mean those regionally determined beneficial uses and water quality objectives in applicable water quality control and basin plans, together with anti-degradation policies that serve as water quality standards under the Clean Water Act.

(pp) "Watershed Management Areas" mean those areas identified in Table B-1 of the NPDES Order where the County is identified as a responsible Copermitee.

(qq) "Watershed Management Area Analysis" means the analysis completed pursuant to Section II.B.3.b.(4) of the NPDES Order.

(rr) "Water Quality Improvement Plans" mean the plans developed by the County in accordance with Section II.B. of the NPDES Order for the Watershed Management Areas.

SEC. 67.803. GENERAL PROVISIONS.

(a) Interpretation of this Chapter shall be consistent with the provisions of state and federal clean water laws and the NPDES Order. The requirements of this Chapter are not intended to interfere with, abrogate or annul any other ordinance, rule, regulation, statute, or terms of the NPDES Order that apply to the operation of the stormwater conveyance system. The requirements of this Chapter are minimum requirements, and where any provision of this Chapter imposes restrictions different from those imposed by any other ordinance (e.g., such as the County Subdivision Ordinance, Title 8, Division 1 of the San Diego County Code of Regulatory Ordinances, the County Grading Ordinance, Title 8, Division 7, Chapter 4, of the San Diego County Code of Regulatory Ordinances, or Part 3, commencing with Section 3000 of the San Diego County Zoning Ordinance regulating animal care), rule, regulation, statute, Stormwater Quality Management Plan, the BMP Design Manual, or the NPDES Order, whichever provisions are more restrictive or impose higher protective standards for human health or the environment shall take precedence.

(b) Except as set forth in Section 67.805, this Chapter shall apply to any development project in the County, whether or not a permit or other approval is required.

(c) If the authorized enforcement official identifies a discharge or category of facility or activity that is a source of a non-stormwater discharge in excess of what is allowed by this Chapter or of pollutants in stormwater or non-stormwater to the stormwater conveyance system or receiving waters, the discharger may be ordered by the authorized enforcement official to install, implement and maintain additional source control, structural or other BMPs to prevent or reduce the pollutant discharges to the MEP and non-stormwater discharges to the extent necessary to bring the discharge

into compliance with this Chapter. Any such order shall specify a reasonable date by which those BMPs must be put in place. Failure to install, implement, or maintain additional BMPs as required by such order, is a violation of this Chapter.

(d) Areas within which facilities and sources will be presumed to be tributary to an impaired water body are identified on the most current listing in the Clean Water Act, Section 303(d). The presumption that a discharge is tributary to an impaired water body can be overcome for a particular discharge based on specific facts and analysis presented by a discharger. In making a site-specific determination as to whether a discharge is tributary to an impaired water body, consideration may be given to the amount of water and pollutant discharged; to whether the pollutant for which the water body is impaired is a suspended or dissolved pollutant; to whether the pollutant is volatile or degradable; and to whether the pollutant is substantially removed during transport by any natural or man-made features (sinks, infiltration areas, ponds or impoundments, vegetated swales or wetlands, media filtration devices, etc.) located between the site and the impaired water body. Any such analysis must consider common mechanisms for pollutant mobilization, remobilization, and transport over time.

(e) An authorized enforcement official may modify any requirement imposed by this Chapter to allow the on-site collection and use of stormwater, or the collection of stormwater for delivery to and use at County-designated sites, provided the modified requirements are enforceable, consistent with the NPDES Order and provide equivalent environmental protection.

SEC. 67.804. DISCHARGE PROHIBITIONS.

(a) It is unlawful for any person to discharge or cause the discharge of pollutants or non-stormwater directly or indirectly into the stormwater conveyance system or receiving waters, except as set forth in Section 67.805 or as otherwise authorized by law.

(b) It is unlawful for any person to construct, use or maintain a connection to the stormwater conveyance system that discharges any matter other than stormwater, except as set forth in Section 67.805(a). This Section expressly supersedes any previously issued permit or authorization granted by the County and expressly prohibits any previously legal non-conforming connection.

(c) It is unlawful to throw, deposit, leave, abandon, maintain, or keep materials or wastes on public or private lands in a manner and place where they may result in a discharge.

(d) Stormwater discharges from the site may not contain sediments in amounts in excess of the sediments that would have been discharged from the site in an undisturbed condition.

SEC. 67.805. EXEMPTIONS FROM DISCHARGE PROHIBITIONS.

The following are exempt from the prohibitions in Section 67.804:

(a) Any discharge or connection regulated under a valid facility-specific NPDES permit or non-stormwater discharges exempted pursuant to Section II.E.2. of the NPDES Order, provided that the discharge or connection is in compliance with all relevant permit conditions and the requirements of the NPDES Order to the satisfaction of the County or Regional Water Quality Control Board.

(b) Discharges of non-stormwater to the stormwater conveyance system covered by NPDES Permit No. CAG919001 (Order No. R9-2007-0034, or subsequent order) for discharges to San Diego Bay, or NPDES Permit No. CAG919002 (Order No. R9-2008-0002, or subsequent order) for discharges to surface waters other than San Diego Bay meeting the requirements enumerated below are allowed unless determined by the County or RWQCB to be a source of pollutants to receiving waters:

- (1) Uncontaminated pumped ground water;
- (2) Discharges from foundation drains if the system is designed to be located at or below the groundwater table to actively or passively extract groundwater during any part of the year;
- (3) Water from crawl space pumps; and
- (4) Water from footing drains if the system is designed to be located at or below the groundwater table to actively or passively extract groundwater during any part of the year.

(c) Non-stormwater discharges from water line flushing and water main breaks to the stormwater conveyance system are allowed provided the discharge is covered by NPDES Permit No. CAG679001 (Order No. R9-2010-003, or subsequent order) unless determined by the County or RWQCB to be a source of pollutants to receiving waters. This exemption does not cover discharges from recycled or reclaimed water lines unless covered by a separate NPDES permit.

(d) Discharges of non-stormwater to the stormwater conveyance system meeting the requirements enumerated below are allowed unless determined by the County or RWQCB to be a source of pollutants to receiving waters:

- (1) Diverted stream flows;
- (2) Rising ground waters;
- (3) Uncontaminated ground water infiltration to stormwater conveyance system;
- (4) Springs;
- (5) Flows from riparian habitats and wetlands;
- (6) Discharges from potable water sources;
- (7) Discharges from foundation drains where the system is designed to be located above the groundwater table at all times of the year, and the system is only expected to discharge non-stormwater under unusual circumstances; and
- (8) Discharges from footing drains where the system is designed to be located above the groundwater table at all times of the year, and the system is only expected to discharge non-stormwater under unusual circumstances.

(e) Discharges of non-stormwater to the stormwater conveyance system as enumerated below are allowed unless determined by the County or RWQCB to be a source of pollutants to receiving waters:

(1) Air conditioning condensation

(A) Whenever feasible, the discharge of air conditioning condensation shall be directed to landscaped areas, pervious surfaces, or to the sanitary sewer.

(2) Individual residential vehicle washing at a residence in accordance with Section 67.807(b)

(A) Whenever feasible, the discharge of wash water shall be directed to landscaped areas or other pervious surfaces; and

(B) The amount of water, washing detergent and other vehicle wash products used shall be the minimum amount necessary to completely wash the vehicle. This requirement shall be deemed violated if visible soap scum, oil sheen, or other by-products of residential vehicle washing reach the gutter or other drainage conveyance device in front of the residence where the vehicle is being washed.

(3) Dechlorinated swimming pool discharges

(A) Residual chlorine from swimming pools and fountains must be eliminated prior to discharging to the stormwater conveyance system or receiving waters;

(B) Filter backwash, acid-wash water (pH <7.2 and > 8.0), and algacide-treated pool water shall be prohibited from discharge to the stormwater conveyance system or receiving water; and

(C) The discharge of saline swimming pool water must be directed to the sanitary sewer, landscaped areas, or other pervious surfaces that can accommodate the volume of water, unless the saline swimming pool water can be discharged via a pipe or concrete channel directly to a naturally saline water body (e.g. Pacific Ocean).

(f) Firefighting discharges to the stormwater conveyance system are only prohibited if determined to be a significant source of pollutants to receiving waters by the County or RWQCB. Firefighting discharges to the stormwater conveyance system not identified as a significant source of pollutants to receiving waters are allowed provided they meet the following requirements:

(1) Non-emergency firefighting discharges

(A) Building fire suppression system maintenance discharges (e.g. sprinkler line flushing) to the stormwater conveyance system are prohibited unless BMPs are implemented to prevent pollutants associated with such discharges from entering the stormwater conveyance system.

(B) Non-emergency firefighting discharges (i.e., discharges from controlled or practice blazes, firefighting training, and maintenance activities not associated with building fire suppression systems) must be addressed by a program developed and implemented by the County, to reduce or eliminate pollutants in such discharges from entering the stormwater conveyance system.

(2) Emergency firefighting discharges

(A) The development and implementation of BMPs to reduce or eliminate pollutants in emergency firefighting discharges to the stormwater conveyance system and receiving waters is encouraged, but not required. Notwithstanding the foregoing, the County may require the use of BMPs for firefighting discharges when determined by the authorized enforcement official to be necessary to eliminate or reduce the discharge of pollutants to the stormwater conveyance system or receiving waters. As applicable, required BMPs may include those described in Sections 67.806 and 67.808. Any BMPs that interfere with immediate emergency response operations or impact public health and safety need not be used.

(g) In the event that any non-stormwater discharge identified in Section 67.805 (a) through (f) is determined to be a source of pollutants to receiving waters, it may only be allowed to continue within an applicable Watershed Management Area if controls set forth by the County in the corresponding Water Quality Improvement Plan are implemented to the satisfaction of the RWQCB.

(h) Discharges exempted from compliance by operation or law; any permits, orders or decisions issued by the RWQCB; and any waivers, or renewals of waivers issued by the RWQCB such as those covered by Regional Board Order No. R9-2014-0041, adopted June 26, 2014.

SEC. 67.806. GENERAL BEST MANAGEMENT PRACTICE REQUIREMENTS.

The following requirements apply to all dischargers:

(a) All dischargers must perform and maintain the following BMPs:

(1) Prior to the rainy season, remove or secure any significant accumulations of eroded soils from slopes previously disturbed by landscaping, clearing or grading, if those eroded soils could otherwise enter and impact the stormwater conveyance system or receiving waters during the rainy season.

(2) Implement, as practicable, those stormwater pollution prevention practices that are generally recognized in that discharger's industry or business as being effective and economically advantageous.

(3) Eliminate illicit connections.

(4) Protect from erosion those slopes that have been disturbed by clearing, grading, or landscaping and are more than three feet in height or steeper than 3:1 (run-to-rise). Slope protection shall occur prior to the first rainy season following the clearing, grading or landscaping of the slope and continuously thereafter.

(5) Store all materials and wastes with the potential to pollute stormwater in a manner that prevents contact with rainfall, run-on, run-off and wind dispersal.

(6) Locate, configure, and manage stockpiles of soil, green waste and compost to prevent the release of materials to the stormwater conveyance system or receiving waters.

(7) Use all materials with the potential to pollute run-off, such as outdoor cleaning and maintenance products, fertilizers, pesticides and herbicides in accordance with label directions. No such product may be disposed of or rinsed into receiving waters or the stormwater conveyance system.

(8) Use dry methods such as sweeping, vacuuming, raking, and application of absorbents to cleanup pollutants, unless wet cleanup methods are otherwise allowed in this Chapter.

(b) BMPs shall be maintained to function as intended and designed. BMPs which fail shall be repaired or replaced as soon as it is safe or practicable. If BMPs fail notwithstanding their intent or design, the BMPs shall be modified or upgraded to prevent any further failure in the same or similar circumstances.

(c) Notwithstanding the provisions of this Chapter, an authorized enforcement official may require a discharger to prepare and submit a Stormwater Pollution Prevention Plan (SWPPP) for approval by the authorized enforcement official as follows:

(1) If the discharger fails to comply with any applicable requirement of this Chapter after one or more written notifications or other enforcement actions have been taken because BMPs have been determined to be inadequate or are not being adequately maintained.

(2) The activity at issue is considered a significant source of pollutants or a source of a non-stormwater discharge in excess of what is allowed by this Chapter to the stormwater conveyance system or receiving waters. Any discharger required to submit and to obtain approval of a SWPPP shall install, implement and maintain the BMPs specified in the approved SWPPP.

(3) The SWPPP shall identify the BMPs or corrective measures that will be used by the discharger to prevent or control pollution of stormwater to the MEP and bring the non-stormwater discharge into conformance with the requirements of this Chapter. If a facility discharges non-stormwater to ground water, the facility shall obtain an RWQCB permit as required by the State Water Code, and shall describe the requirements of that permit in the SWPPP.

(d) Notification of Spills, Releases and Illegal Discharges.

(1) Spills, releases, or discharges of pollutants or non-stormwater in excess of what is allowed by this Chapter to receiving waters or to the stormwater conveyance system shall be reported by the discharger as required by all applicable state and federal laws.

(2) Any such spills, releases or discharges with the potential to endanger health, safety or the environment shall be reported to the Director, Department of Public Works, within 24

hours after discovery of the spill, release or discharge. Spills that have been completely contained and cleaned up on-site are not considered significant unless they pose a threat to human health or safety.

(3) If safe to do so, necessary actions shall be taken to contain and minimize the spill, release or discharge of any pollutants to the MEP and bring any allowed discharge of non-stormwater into compliance with this Chapter.

(e) Sampling, Testing, Monitoring, and Reporting.

(1) Dischargers shall perform the sampling, testing, monitoring and reporting required by this Chapter.

(2) An authorized enforcement official may order a discharger to conduct testing or monitoring and to report the results to the County if one or more of the following occurs:

(A) The authorized enforcement official determines that testing or monitoring is needed to determine whether BMPs are effectively preventing or reducing pollution in stormwater to the MEP or necessary to allow for the continued discharge of non-stormwater under the limited circumstances permitted by this Chapter.

(B) Testing or monitoring is needed to determine whether the facility is a significant source of pollutants or of otherwise prohibited non-stormwater discharges to receiving waters or the stormwater conveyance system.

(C) The authorized enforcement official determines that testing or monitoring is needed to assess the impacts of a discharge on the public's health, safety or the environment.

(D) A discharge has not been eliminated after written notice by an authorized enforcement official.

(E) The RWQCB requires the County to provide any information related to the discharger's activities.

(3) Sampling, testing or monitoring ordered pursuant to this Section may include one or more of the following:

(A) Visual monitoring of dry weather flows, wet weather erosion, discharge points or conditions of BMPs.

(B) Visual monitoring of premises for spills or discharges.

(C) Laboratory analyses of discharges for pollutants.

(D) Background or baseline monitoring or analysis.

(E) Monitoring of receiving waters or sediments that may be affected by pollutant discharges by the discharger or by a group of dischargers including the discharger.

(4) The authorized enforcement official may direct the manner in which the results of required testing and monitoring are reported, and may determine that sampling, testing or monitoring may discontinue.

SEC. 67.807. ADDITIONAL MINIMUM BEST MANAGEMENT AND POLLUTION PREVENTION PRACTICES FOR RESIDENTIAL ACTIVITIES AND USES.

Residential dischargers shall install and maintain BMPs and implement pollution prevention practices, as follows:

(a) Motor Vehicle or Boat Repair and Maintenance.

(1) All repair and maintenance activities shall be performed under a permanent roof or other permanent cover, where feasible.

(2) All maintenance and repair activities conducted without cover or without BMPs to prevent discharges are prohibited during times of precipitation.

(3) Any release of fluids, including boat bilge water, during repair or maintenance shall be promptly contained and cleaned up. Any absorbent materials used shall be disposed of as required by law.

(4) Degreasing or pressure washing of engines and other parts is prohibited unless the liquid wastes are contained and properly disposed of as required by law.

(5) Automotive and boat materials and wastes shall be stored indoors, under cover, or in secure and watertight containers.

(b) Residential Motor Vehicle Washing.

(1) Individual motor vehicles shall be washed over porous surfaces such as lawns and gravel areas where feasible.

(2) Unused detergent solutions shall not be disposed of directly or indirectly into the stormwater conveyance system or receiving waters. Disposal to the sanitary sewer, such as a sink, toilet or floor drain or to a porous surface, where allowed by this Chapter, is required.

(3) The use of "hose off" or single use engine degreasing chemicals is prohibited, unless captured and disposed of properly.

(4) Motor vehicle washing other than individual residential motor vehicle washing is prohibited.

(5) Degreasing or pressure washing of engines and other parts is prohibited unless the liquid wastes are contained and properly disposed of as required by law.

(c) Motor Vehicle Parking.

(1) Residential dischargers shall remove excessive accumulations of oil and grease deposited by vehicles they own from parking areas, using dry clean-up methods such as absorbents, scraping, vacuuming, sweeping, mop and bucket.

(2) Residential dischargers shall move vehicles from streets when notified to allow street cleaning.

(d) Home and garden care activities and product use.

(1) Residential dischargers or their contractors shall adjust irrigation systems to avoid run-off that causes discharges to the stormwater conveyance system or receiving waters.

(2) Residential dischargers or their contractors shall clean up and properly dispose of spills from gardening chemicals, fertilizers or soils to non-porous surfaces.

(3) Lawn and garden care products shall be stored in closed, labeled containers, such as in covered areas, off the ground, or under protective tarps, and in a manner that will not lead to a discharge.

(4) Disposal of household hazardous waste directly or indirectly to the trash or to the street, gutter or storm drain is prohibited.

(e) Home care and maintenance.

(1) Cleaning of painting equipment in or over streets, sidewalks, gutters, or yard drains is prohibited.

(2) Action shall be taken to minimize and contain all spills of hazardous materials, if it is safe to do so.

(3) Household hazardous materials shall be stored indoors or under cover, and in closed and labeled containers.

(f) Manure and pet waste management.

(1) Where practicable, all areas where livestock, horses or other large animals are confined, shall be bermed or curbed to contain animal waste where it is produced or managed to prevent discharge of waste or waste byproducts to the stormwater conveyance system or receiving waters. If compliance is not practicable, manure shall be cleaned up at least twice weekly and must be composted or properly stored prior to disposal.

(2) Wastes from small animals (e.g., dogs and cats) shall be cleaned up and properly disposed of at least weekly.

(3) Areas used for storing or composting manure shall be located, configured or managed to prevent run-off to stormwater conveyance system or receiving waters.

(g) Private sewer laterals and on-site wastewater systems.

(1) Private sewer laterals shall be cleaned, maintained and when necessary replaced to prevent seepage and spills. On-site wastewater systems shall be pumped, maintained and when necessary modified or replaced to prevent spills.

(2) Spills from private sewer laterals and on-site wastewater systems shall be contained and cleaned-up in a manner that minimizes any release of pollutants to the stormwater conveyance system or receiving waters.

(3) Any release from a private sewer lateral that enters the stormwater conveyance system or receiving waters shall be immediately reported to the County.

(4) Failed on-site wastewater systems shall be repaired or replaced.

SEC. 67.808. ADDITIONAL MINIMUM BEST MANAGEMENT AND POLLUTION PREVENTION PRACTICES FOR INDUSTRIAL, COMMERCIAL AND MUNICIPAL FACILITIES AND ACTIVITIES.

The following requirements apply to all industrial, commercial and municipal facilities and activities:

(a) The owner or operator shall install and maintain BMPs and implement a pollution prevention program appropriate to the activity, as specified in the following areas and manner:

(1) Stormwater BMP training

(A) Provide stormwater BMP training at least annually to all operators, employees, and workers with responsibility for activities that could result in unauthorized discharges of pollution or non-stormwater.

(B) Training shall address the pollution and non-stormwater generating activities conducted at the facility, the pollutants or risk of non-stormwater discharge associated with those activities, and the BMPs or pollution prevention practices used to minimize or eliminate the discharge of non-stormwater and pollutants.

(C) The following BMP categories shall be included in training ,where applicable:

i. Preventive maintenance.

ii. Good housekeeping.

iii. Proper waste disposal.

iv. Non-stormwater disposal alternatives.

v. Equipment/vehicle maintenance and repair.

vi. Spill response, containment, and recovery.

vii. Recycling, re-use, and volume reduction in materials, water consumption and wastes.

viii. BMP maintenance.

(2) Where required to implement a SWPPP, retain on site a copy of a current, complete, site-specific SWPPP and make it available for review by the authorized enforcement official, upon request.

(3) Review the operations and procedures relating to protecting the stormwater conveyance system and receiving waters from pollutants and prohibited, non-stormwater discharges at least annually.

(4) Implement pollution prevention methods or those stormwater pollution prevention practices that are generally recognized in that discharger's industry or business to eliminate or reduce pollutants in run-off to the MEP and eliminate the discharge of non-stormwater in an amount or manner beyond what is allowed by this Chapter.

(5) Housekeeping.

(A) The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed, transported and disposed of in accordance with this Chapter.

(B) Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters.

(6) Liquid waste management

(A) Wet clean-up or cleaning methods such as hosing, steaming or pressure washing are prohibited except where adequate precautions have been taken to prevent the discharge of wash water and pollutants into the stormwater conveyance system or receiving waters.

(B) Disposal of slurries to the stormwater conveyance system or receiving waters is prohibited.

(C) Rinse water shall be confined to a designated area such as a sanitary sewer, dead-end sump, process treatment system, or hole where water percolates or evaporates and solids are removed for collection and disposal. Rinse water and solids shall be re-used, recycled, or disposed of in accordance with this Chapter.

- (D) Wash water shall be directed to an approved sanitary sewer or landscaped locations.
- (E) Wash racks.
- i. Wash rack areas shall have perimeter control and be properly sloped to a grated floor drain.
 - ii. Wash rack areas shall drain to the sanitary sewer or to a holding tank, except that wash racks for animals may drain to the ground in accordance with this Chapter.
- (F) Disposal of wastewater to the stormwater conveyance system, receiving waters, or the ground, is prohibited.
- (G) If provided, pump-out services for boats, portable toilets, or other holding tanks shall be conducted in a manner that prevents the release of sewage to the stormwater conveyance system or receiving waters.
- (H) Wastewater shall be disposed to the sanitary sewer at the job site or to a holding tank. Disposal of wastewater contained in holding tanks shall be disposed of to the sanitary sewer at the business's company headquarters or at an approved facility.
- (I) Discharging backwash wastewater to the stormwater conveyance system or receiving waters is prohibited. Backwash wastewater may be disposed to the sanitary sewer; to a holding tank or settling pond; or where allowed by this Chapter, by infiltration to the soil.
- (J) Under the limited circumstances allowed by this Chapter, pool and spa water intended for discharge to the stormwater conveyance system shall be dechlorinated or debrominated prior to discharge.
- (K) Under the limited circumstances allowed by this Chapter, pool and spa water discharged after acid washing shall be neutralized to a pH of 7.2 - 8.0.
- (L) If rinse water from the cleaning of portable sanitary toilet closets cannot be properly disposed of to the sanitary sewer at a job site, it shall be contained prior to disposal at the service facility or other approved facility.
- (M) Wash and rinse water from building and pavement washing that cannot be properly disposed of at the job site shall be collected and contained for recycling, reuse, or proper disposal.
- (N) Where irrigation tail-water return ponds are used, the ponds shall be designed with the appropriate vertical separation between the base of the pond and the seasonal high groundwater mark and must be lined or managed to prevent the movement of water-soluble chemicals to the groundwater and to stormwater flows.

(7) Materials and waste management.

(A) Spill prevention and response.

- i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible.
- ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use.
- iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.

(B) Hazardous materials and hazardous wastes.

- i. Hazardous materials and wastes shall be stored, managed, and disposed in accordance with applicable federal, state and local laws and regulations.
- ii. Hazardous materials and wastes shall be stored above the ground. Where practicable, provide overhead coverage for all outside hazardous materials or waste storage areas. If overhead coverage is not available, stored materials shall be covered with an impervious material such as a tarp or other similar method.
- iii. Paints, coatings, thinners, and other materials shall be disposed of in accordance with this Chapter.
- iv. Secondary containment of hazardous materials or waste shall be provided around storage areas if the authorized enforcement official has determined that a significant potential exists to discharge materials or wastes to the stormwater conveyance system or receiving waters.
- v. Hazardous waste storage areas shall be inspected by the owner or operator, at least once prior to the rainy season and monthly during the rainy season.
- vi. Pesticides and other chemical products shall be used, stored, and disposed of in accordance with applicable federal, state, and local laws and regulations.
- vii. The outdoor application of fertilizers and pesticides is prohibited during rainfall.
- viii. Pesticide use shall be reduced whenever practical in areas where recurring applications of pesticides are performed.

(C) Solid, non-hazardous materials and waste.

- i. Trash storage and disposal areas shall be kept clean and free of debris.

ii. Dumpsters, grease bins, grease traps, and interceptors, and other containers shall be maintained in a clean and leak-proof condition and shall be kept securely closed when not in use.

iii. Materials and equipment necessary for the clean-up of trash and debris shall be maintained and kept readily accessible.

iv. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry clean-up methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this Chapter.

v. All areas where livestock, horses or other large animals are confined shall be bermed or curbed in a manner that avoids a discharge of manure to the stormwater conveyance system or receiving water. If berms or curbs are not practicable, manure shall be cleaned up at least twice weekly and must be composted or properly stored prior to disposal.

vi. Wastes from small animals (e.g., dogs and cats) shall be cleaned up and properly disposed of at least weekly.

(D) Loading and unloading.

i. Storm drain inlets located within or down-gradient of loading or unloading areas shall be covered or otherwise protected during loading and unloading activities to prevent the entry of pollutants and prohibited non-stormwater discharges into the stormwater conveyance system or receiving waters.

ii. Equipment and supplies stored in loading and unloading areas shall be properly maintained to prevent leaks and spills to the stormwater conveyance system or receiving waters, and to prevent their contact with rainfall and run-on.

(E) Storage.

i. Outdoor storage areas of materials and equipment shall be configured using berms, dikes, or other diversion structures or other measures that elevate stored materials and equipment from site surfaces.

ii. Containers shall be kept in a leak-proof condition, securely closed when not in use, and stored in a manner that protects them from contact with precipitation or surface waters.

iii. Storage of cement and masonry materials shall be above ground and covered.

iv. Placement of stock piles within any drainage system is prohibited.

v. Stockpiles and bulk materials, such as soil, fertilizer, and potting mixture shall be covered during windy and rainy conditions where practicable. Prior to the onset of predicted rain, stockpiles shall be covered and bermed to prevent contact with stormwater.

(8) Vehicles and equipment.

(A) All vehicles and equipment shall be properly maintained and inspected to ensure their proper functioning to prevent discharges.

(B) Vehicles and equipment shall not be washed in areas where wash water or rinse water will drain to the stormwater conveyance system or receiving waters.

(C) Infiltration of wash or rinse water to pervious surfaces is allowed with a minimum of 10 feet separation between the groundwater and the pervious surface, except that wash or rinse water generated from cleaning engines, mechanical parts, or heavy equipment shall not infiltrate a pervious surface.

(D) The use of hose-off or single-use engine degreasing chemicals is prohibited, unless captured and properly disposed.

(E) Maintenance and repair equipment shall be kept clean to avoid the build-up of grease and oil.

(F) Fluids shall be drained from any retired vehicles or equipment stored on site.

(G) Vehicle and equipment maintenance and repair work such as body work shall be conducted indoors or under cover, where practicable. If work cannot be conducted indoors or under cover, other BMPs shall be implemented to prevent the discharge of pollutants into the stormwater conveyance system or receiving waters. Discharge of non-stormwater to the stormwater conveyance system is prohibited.

(H) Major repair and maintenance work on boats over or in the water is prohibited. Touch-up painting, tune ups, or other similar activities are not considered major repair or maintenance work, but may only be conducted over or in the water if adequate precautions have been taken to prevent the entry of pollutants into the water.

(9) Outdoor areas - housekeeping and grounds keeping practices.

(A) Storm drain inlets located within or down gradient of the activity shall be covered or otherwise protected from the entry of pollutants and non-stormwater during the work activity.

(B) Landscaping, grounds keeping and agriculture unless exempt pursuant to Section 67.805(h).

i. Exposed slopes shall be stabilized as soon as possible.

ii. Paved surfaces such as sidewalks shall be cleaned regularly using dry clean-up methods such as sweeping or vacuuming. Hosing is permissible only after surfaces have previously been cleaned using dry methods, and only if precautions have been taken to prevent the discharge of run-off to the storm drain.

iii. Business, industrial and municipal facilities owners and their contractors shall clean-up and properly dispose of spills from any pesticides, herbicides and fertilizers to non-porous surfaces. These materials shall be stored in closed, labeled containers, such as in covered areas, off the ground, or under protective tarps, and in a manner that will not lead to a discharge. Disposal of pesticides, herbicides and fertilizers to the stormwater conveyance system and receiving waters is prohibited.

(C) Parking lots and vehicle storage areas.

i. Wet clean-up methods may only be used where adequate precautions have been taken to prevent the entry of wash water and pollutants into the stormwater conveyance system or receiving waters.

ii. Vehicle maintenance and repair operations with the potential to release non-stormwater or pollutants are prohibited at commercial parking lots and storage facilities.

(D) Rooftops.

i. Materials which may contaminate stormwater shall not be stored on rooftops unless adequate precautions have been taken to prevent their contact with stormwater.

ii. Equipment such as emergency generators, HVAC systems and other similar items located on rooftops shall be inspected and preventive maintenance conducted to prevent leaks and spills.

iii. Substances such as bird droppings, grease, leaves, that have accumulated on rooftops shall be removed, as practicable, to prevent or reduce the discharge of contaminants directly or indirectly to the stormwater conveyance system or receiving waters.

iv. Where feasible, roof downspouts shall be routed away from work areas and toward pervious areas such as lawns, except where required under Sections 67.810 and 67.811.

(b) Other requirements.

(1) Any commercial, industrial, or municipal facility or activity operating under the statewide Industrial General Permit shall provide the following documents for on-site review by the authorized enforcement official as applicable, and if requested:

- (A) The Notice of Intent letter or a Waste Discharge Identification Number issued by the SWRCB.
- (B) A SWPPP satisfying the requirements of the Industrial General Permit.
- (C) A monitoring program satisfying the requirements of the Industrial General Permit.
- (D) Training records satisfying the requirements of the Industrial General Permit.

(2) Any discharger whose facilities or activities are not in compliance with this Chapter, or any discharger or category of dischargers determined to pose a significant threat to water quality, may be required to implement additional controls as determined by the authorized enforcement official. The authorized enforcement official may require dischargers to maintain, on site, written documentation of these additional requirements, and to provide such documentation upon request.

SEC. 67.809. ADDITIONAL REQUIREMENTS FOR CONSTRUCTION PROJECTS.

(a) All owners of land on which a construction project is performed and all persons performing the work, including without limitation any construction projects involving land disturbance activities, except that a local government or public authority is not a discharger for purposes of land disturbance activities conducted by others in connection with a private construction project in public rights-of-way, shall ensure that the following additional types of BMPs shall be installed, implemented, and maintained year round:

- (1) Project planning;
- (2) Good site management "Housekeeping", including waste management;
- (3) Non-stormwater management;
- (4) Erosion control;
- (5) Sediment control;
- (6) Run-on and run-off control; and
- (7) Active/passive sediment treatment systems, where applicable.

(8) BMPs must be site specific, seasonably appropriate, and construction plan appropriate. Dry season BMPs must plan for and address unusual rain events that may occur during the dry season (May 1 through September 30th).

(b) Prior to obtaining any permit that allows for commencement of a construction project that includes land disturbance activities that can potentially generate pollutants in stormwater runoff, the owner of the property on which the land disturbance activities are performed or the person

performing the work shall submit, to the satisfaction of the Director of Public Works or the authorized enforcement official, the following:

(1) A plan describing the pollution control strategies to be implemented on-site that complies with local ordinances and the NPDES Order. The plan submittal shall include the following information:

- (A) The name, address, phone number and email for the owner and person performing the work;
- (B) Basic site information including the address, hydrologic subarea, Waste Discharge Identification Number (WDID), if applicable, and approximate area of disturbance;
- (C) Whether the site is considered a high threat to water quality pursuant to the NPDES Order;
- (D) The project's estimated start and completion dates; and
- (E) Identification of seasonally appropriate and effective BMPs and management measures as described in Section 67.809(a).

(c) BMPs shall be inspected routinely by the person performing the land disturbance activity or construction project and the property owner to ensure the BMPs are maintained and continue to function as intended. In addition, BMPs shall be inspected and maintenance, repair or replacement performed following every rain event to ensure the BMPs continue to function as intended.

SEC. 67.810. ADDITIONAL PLANNING, DESIGN AND POST-CONSTRUCTION REQUIREMENTS FOR DEVELOPMENT PROJECTS (PRIOR TO EFFECTIVE DATE OF BMP DESIGN MANUAL)

The following requirements shall remain in effect only until the effective date of the County BMP Design Manual. At that time, the requirements of Section 67.811 shall apply. The actual effective date of the BMP Design Manual will be on its acceptance by the RWQCB, but will not be sooner than December 24, 2015.

(a) County Permits and Approvals.

(1) An application for any of the following discretionary permits or approvals shall be accompanied by plans demonstrating how the development project will comply with the requirements of this Chapter. The permit or approval shall not be granted unless the decision maker determines that the development project complies with the applicable requirements of this Chapter.

- (A) Administrative permit for clearing, including modification, minor deviation, or extension.

- (B) Administrative permit for small recycling collection facility, including modification, minor deviation, or extension.
- (C) Certificate of compliance.
- (D) Final map modification.
- (E) Grading plans or grading permits, if approval is discretionary, including Modification or Renewal.
- (F) Improvement Plan, including Modification.
- (G) Landscape Plan.
- (H) Major Use Permit, including modification, minor deviation, or extension.
- (I) Minor Use Permit, including modification, minor deviation, or extension.
- (J) Parcel map modification.
- (K) Reclamation plan.
- (L) Site plan, including modification, minor deviation, or extension.
- (M) Solid waste facility permit.
- (N) Tentative map, including resolution amendment, time extension, expired tentative map and revised tentative map.
- (O) Tentative parcel map, including resolution amendment, time extension, expired tentative parcel map and revised tentative parcel map.
- (P) Watercourse permit.
- (Q) Farm Employee Housing
- (R) Guest Living Quarters
- (S) Horse Stable
- (T) Host Home
- (U) MET Facilities
- (V) Mobile Financial Business Office
- (W) Oversized Structures

- (X) Photovoltaic Solar Energy System Offsite Use
- (Y) Recycling Collection Facility – Small
- (Z) Second Dwelling Unit/Garage
- (AA) Small Winery
- (BB) Wind Turbine – Small

(2) An application for any of the following ministerial permits or approvals shall be accompanied by plans demonstrating how the development project will comply with the requirements of this Chapter. The permit or approval shall not be granted unless the decision-maker determines that the development project complies with the requirements of this Chapter.

- (A) Building permit.
- (B) Construction right of way permit.
- (C) Encroachment permit.
- (D) Excavation permit.
- (E) Grading plans or grading permits, if approval is ministerial, including modification or renewal.
- (F) On-site wastewater system permit.
- (G) Underground tank permit.
- (H) Well permit.

(b) A priority development project shall not receive final approval until the developer has installed and implemented the required BMPs in accordance with the requirements of this Chapter.

(c) All applications to the County for a permit or approval associated with a development project must be accompanied by a stormwater management plan on a form or in a format specified by the County. The plan shall describe the manner in which the BMPs required by this Chapter will be implemented.

(d) All development projects with the potential to add pollutants to stormwater or to affect the flow rate or velocity of stormwater run-off after construction is completed shall employ the following post-construction BMPs, where feasible, to ensure that pollutants and run-off from the development will be reduced to the MEP and will not significantly degrade receiving water quality:

- (1) Low impact development. All priority development projects shall install, implement, and maintain low impact development BMPs to maximize infiltration, provide retention, slow

run-off, minimize impervious footprint and constructed widths, and direct run-off from impervious areas into landscaping. This shall include the following, where feasible:

- (A) Minimize directly connected impervious surfaces.
 - (B) If developed with landscaped or other pervious areas, drain a portion of impervious areas such as rooftops, parking lots, sidewalks, walkways, and patios into pervious areas prior to discharge to the stormwater conveyance system. The amount of run-off from impervious areas that drains to pervious areas shall correspond with the total capacity of the project's pervious areas to infiltrate or treat run-off, taking into consideration the pervious areas' soil conditions, slope, and other pertinent factors.
 - (C) If developed with landscaped or other pervious areas, properly design and construct the pervious areas to effectively receive and infiltrate or treat run-off from impervious areas, taking into consideration the pervious areas' soil conditions, slope, and other pertinent factors.
 - (D) If developed with low traffic areas and appropriate soil conditions, construct a portion of walkways, trails, overflow parking lots, alleys, or other low-traffic areas with permeable surfaces, such as pervious concrete, porous asphalt, unit pavers, and granular materials.
 - (E) Conserve natural areas, including existing trees, other vegetation, and soils, where feasible.
 - (F) Construct streets, sidewalks, or parking lot aisles to the minimum widths necessary, provided that public safety and a walkable environment for pedestrians are not compromised, where feasible.
 - (G) Minimize the impervious footprint of the project, where feasible.
 - (H) Minimize soil compaction, where feasible.
 - (I) Minimize disturbances to natural drainages, such as natural swales, or topographic depressions, where feasible.
 - (J) Implement buffer zones for natural water bodies, where feasible. Where buffer zones are not feasible, other equally serving methods may be implemented such as trees or access restrictions.
- (2) Source control BMPs.
- (A) Source control BMPs include storm drain system stenciling and posting of signs; posting of signs or other form of notification at storm drain inlets and access points to creeks and channels discouraging illegal dumping and stating the receiving water by name; properly designed outdoor material storage areas; properly designed trash storage areas; and implementation of efficient irrigation systems.

(3) Hydromodification management.

(A) Projects located in the areas west of the Pacific/Salton Divide shall follow the approach and criteria and are subject to the exemptions described in the County's Standard Urban Storm Water Mitigation Plan.

(B) Projects located in the areas east of the Pacific/Salton Divide shall follow the approach and criteria and are subject to the exemptions described in the State Water Resources Control Board NPDES General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities.

(4) Structural BMPs. All priority development projects shall install, implement and maintain the following structural BMPs:

(A) All structural BMPs shall be designed to meet the design storm criteria required under the California Regional Water Quality Control Board, San Diego Region Order No. R9-2007-0001, NPDES Permit No. CAS 108758.

(B) One or more structural treatment BMPs may be used for a single project or combination of projects. Any such shared BMPs shall be operational prior to the use of any dependent development or phase of development. The shared BMPs shall only be required to treat the dependent developments or phases of development that are in use. Interim stormwater BMPs that provide equivalent or greater treatment than is required by this Chapter may be implemented by a dependent development until each shared BMP is operational. If interim BMPs are utilized, the BMPs shall remain in use until permanent BMPs are operational.

(5) Whether or not a County permit or approval is required, and whether or not a post-construction stormwater management plan is required to be submitted, all dischargers engaged in land development or significant redevelopment activities shall implement post-construction BMPs in the following areas, if applicable, to the project:

(A) These BMPs can include structures to convey run-off safely from the tops of slopes, vegetation or alternative stabilization of all disturbed slopes, the use of natural drainage systems to the MEP, flow and velocity controls upstream of sites; and stabilization or permanent channel crossings, unless the crossing is not publicly accessible and is not frequently used.

(B) BMPs to control flows, velocity and erosion may include the use of energy dissipaters, such as riprap, at the outlets of storm drains, culverts, conduits, or lined channels that enter unlined channels to minimize erosion; installation of retention or equalization basins; or other measures. Flow control and downstream erosion protection measures shall prevent any significant increase in downstream erosion as a result of the new development, but shall not prevent flows needed to sustain downstream riparian habitats or wetlands.

(C) Stabilize permanent channel crossings.

(6) Structural BMPs to treat or to infiltrate stormwater where a development project would otherwise cause or contribute to a violation of water quality standards in receiving waters. Off-site structural BMPs may be used for treatment and infiltration necessary to meet water quality standards only if the conveyance of run-off to those facilities prior to treatment will not cause or contribute to an exceedance of water quality standards, or deprive wetlands or riparian habitats of needed flows.

(7) When an infiltration BMP is used, the following requirements apply:

(A) Infiltration BMPs shall not cause or contribute to an exceedance of applicable groundwater quality objectives as set out in the RWQCB "Basin Plan" for the San Diego area.

(B) Infiltration BMPs shall be designed to protect groundwater by providing 10 feet of vertical separation between the base of the infiltration BMP and the seasonal high groundwater mark, unless otherwise authorized by the RWQCB.

(C) Infiltration BMPs shall be setback horizontally 100 feet from any water supply wells and 100 feet from septic systems.

(D) Infiltration BMPs must be designed to completely drain within 96 hours after a storm. If the infiltration rates of the underlying soils are slow, depth and footprint of the infiltration BMP must be adjusted to achieve this standard.

(E) Restrictions to infiltration BMPs shall be in compliance with Section D.1.d.(12) of the California Regional Water Quality Control Board, San Diego Region Order No. R9-2007-0001, NPDES Permit No. CAS0108758.

(8) The authorized enforcement official with responsibility for the principal permits or approvals sought for a priority development project may waive the requirements of Section 67.810(d)(1), if compliance would be infeasible. A waiver shall only be granted if all available structural treatment BMPs have been considered and rejected as infeasible. If a waiver is granted, the authorized enforcement official may impose alternative, feasible run-off treatment requirements, or may impose other conditions consistent with state law and County ordinances to facilitate the construction of a shared treatment facility in the future.

SEC. 67.811. ADDITIONAL PLANNING, DESIGN AND POST-CONSTRUCTION REQUIREMENTS FOR DEVELOPMENT PROJECTS (AFTER EFFECTIVE DATE OF BMP DESIGN MANUAL)

The following requirements shall become effective only after the effective date of the County BMP Design Manual. Prior to that time, the requirements of Section 67.810 shall apply. The actual effective date of the BMP Design Manual will be on its acceptance by the RWQCB, but will not be sooner than December 24, 2015.

(a) Requirements for all Development Projects

(1) All development projects located in the areas east of the Pacific/Salton Divide shall follow as applicable the approach and criteria described in the State Water Resources Control Board General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities. Development projects located in the areas west of the Pacific/Salton Divide shall implement and maintain BMPs in accordance with the NPDES Order following the approach and criteria described in the BMP Design Manual.

(2) All development projects must submit a Stormwater Quality Management Plan (SWQMP) with an application for a County permit or other County approval, identifying the measures that will be used for stormwater and non-stormwater management for the project. There are two types of SWQMPs: a Standard SWQMP and a PDP SWQMP. A PDP SWQMP is required for all Priority Development Projects west of the Pacific/Salton Divide. Standard SWQMPs are required for all development projects east of the Pacific/Salton Divide, and for all projects west of the Pacific/Salton Divide that are not Priority Development Projects.

(3) General Requirements. BMPs shall be designed, constructed and maintained subject to the following criteria:

(A) Onsite BMPs must be located so as to remove pollutants from runoff prior to its discharge to any receiving waters, and as close to the source as possible;

(B) Structural BMPs may not be constructed in receiving waters; and

(C) Onsite BMPs must be designed and implemented with measures to avoid the creation of nuisance or pollution associated with vectors (e.g., mosquitos, rodents, or flies).

(4) Source Control BMP Requirements. Where applicable and feasible, source control BMPs must be implemented at all development projects to achieve the following:

(A) Prevention of illicit discharges into the stormwater conveyance system;

(B) Stenciling and marking of all storm drains in accordance with the BMP Design Manual;

(C) Protection of all outdoor material storage areas from rainfall, run-on, runoff, and wind dispersal;

(D) Protection of materials stored in outdoor work areas from rainfall, run-on, runoff, and wind dispersal;

(E) Protection of trash storage areas from rainfall, run-on, runoff, and wind dispersal; and

(F) Implementation of additional BMPs as the County determines necessary to minimize pollutant generation.

(5) Site Design Requirements. Where applicable and feasible, the following Site Design BMPs must be implemented at all development projects:

- (A) Natural storage reservoirs and drainage corridors (including topographic depressions, areas of permeable soils, natural swales, and ephemeral and intermittent streams) must be maintained or restored;
- (B) Buffer zones must be provided for natural water bodies whenever technically feasible. When buffer zones are technically infeasible, other buffers such as trees and access restrictions are required;
- (C) Natural areas within the project footprint should be conserved whenever possible;
- (D) Streets, sidewalks, and parking lot aisles shall be constructed to the minimum widths necessary consistent with public safety;
- (E) The impervious footprint of the project shall be minimized;
- (F) Soil compaction to landscaped areas shall be minimized where doing so does not create an excessive risk of slope failure or erosion;
- (G) Impervious surfaces shall be disconnected by disturbed pervious areas that can be used to infiltrate runoff;
- (H) Landscaped or other pervious areas shall be designed and constructed to effectively receive and infiltrate, retain, and/or treat runoff from impervious areas prior to discharging to the stormwater conveyance system;
- (I) Small collection strategies shall be located at, or as close as possible to, the source of the discharge;
- (J) Permeable materials shall be used for projects with low traffic areas and appropriate soil conditions;
- (K) Native or drought tolerant landscaping shall be used; and
- (L) Precipitation shall be harvested and used for landscaping or other permitted use.

(b) Additional Requirements for Priority Development Projects. In addition to meeting the BMP requirements applicable to all other development projects as required by the NPDES Order and set forth above, the following are applicable to Priority Development Projects.

(1) Priority Development Projects include:

- (A) New development projects that create 10,000 square feet or more of impervious surfaces (collectively over the entire project site). This includes

commercial, industrial, residential, mixed-use, and public development projects on public or private land.

(B) Redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site on an existing site of 10,000 square feet or more of impervious surfaces). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.

(C) New and redevelopment projects that create 5,000 square feet or more of impervious surface (collectively over the entire project site), and support one or more of the following uses:

i. Restaurants. This category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812).

ii. Hillside development projects. This category includes development on any natural slope that is twenty-five percent or greater.

iii. Parking lots. This category is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce.

iv. Streets, roads, highways, freeways, and driveways. This category is defined as any paved impervious surface used for the transportation of automobiles, trucks, motorcycles, and other vehicles.

(D) New or redevelopment projects that create or replace 2,500 square feet or more of impervious surface (collectively over the entire project site), and discharging directly to an ESA. "Discharging directly to" includes flow that is conveyed overland a distance of 200 feet or less from the project to the ESA, or conveyed in a pipe or open channel any distance as an isolated flow from the project to the ESA (i.e., not commingled with flows from adjacent lands).

(E) New development projects that support one or more of the following uses:

i. Automotive repair shops. This category is defined as a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539.

ii. Retail gasoline outlets (RGOs). This category includes RGOs that meet the following criteria:

- a. 5,000 square feet or more; or
- b. A projected Average Daily Traffic (ADT) of 100 or more vehicles per day.

- (F) New or redevelopment projects that result in the disturbance of one or more acres of land and are expected to generate pollutants post construction.
- (2) The following projects shall not be considered priority development projects:
- (A) New or retrofit paved sidewalks, bicycle lanes, or trails that meet the following criteria:
- i. Designed and constructed to direct stormwater runoff to adjacent vegetated areas, or other non-erodible permeable areas; or
 - ii. Designed and constructed to be hydraulically disconnected from paved streets or roads; or
 - iii. Designed and constructed with permeable pavements or surfaces in accordance with USEPA Green Streets guidance.
- (B) Retrofitting or redevelopment of existing paved alleys, streets or roads that are designed and constructed in accordance with the USEPA Green Streets guidance. Compliance with any Green Street guidance developed by the County shall be deemed to satisfy this requirement as long as that guidance is as protective of water quality as the USEPA Green Streets guidance. Green Streets projects are subject to County review and approval.
- (3) Special considerations for redevelopment projects:
- (A) Where redevelopment results in the creation or replacement of impervious surface in an amount of less than fifty percent of the surface area of the previously existing development, then the structural BMP performance requirements defined in the BMP Design Manual apply only to the creation or replacement of impervious surface, and not the entire development; or
- (B) Where redevelopment results in the creation or replacement of impervious surface in an amount of more than fifty percent of the surface area of the previously existing development, then the structural BMP performance requirements defined in the BMP Design Manual apply to the entire development.
- (4) Priority Development Projects must implement structural BMPs that conform to performance requirements described below:
- (A) Each PDP must implement BMPs that are designed to retain (i.e., intercept, store, infiltrate, evaporate, and evapotranspire) onsite the pollutants contained in the volume of stormwater runoff produced from a 24-hour 85th percentile storm event (design capture volume); or
- (B) If retaining the full design capture volume onsite is not technically feasible, biofiltration BMPs may be used. Biofiltration BMPs must be designed to have an appropriate hydraulic loading rate to maximize stormwater retention and pollutant

removal, as well as to prevent erosion, scour, and channeling within the BMP, and must be sized to:

- i. Treat 1.5 times the design capture volume not reliably retained onsite, or
- ii. Treat the design capture volume not reliably retained onsite with a flow-thru design that has a total volume, including pore spaces and pre-filter detention volume, sized to hold at least 0.75 times the portion of the design capture volume not reliably retained onsite.

(5) Hydromodification Management BMP Requirements. Priority Development Projects must implement onsite BMPs to manage hydromodification that may be caused by stormwater runoff discharged from a project as follows:

(A) Hydromodification BMPs must be sized and designed such that post-project runoff conditions (flow rates and durations) will not exceed pre-development runoff conditions by more than 10 percent (for the range of flows that result in increased potential for erosion, or degraded instream habitat downstream of Priority Development Projects).

(B) A Priority Development Project may be exempted from the hydromodification management BMP performance requirements where the project discharges stormwater runoff to:

- i. Existing underground storm drains that discharge directly to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean; or
- ii. Conveyance channels whose bed and bank are concrete lined all the way from the point of discharge to water storage reservoirs, lakes, enclosed embayments or the Pacific Ocean; or
- iii. An area identified by the County as appropriate for an exemption through a Watershed Management Area Analysis incorporated into a Water Quality Improvement Plan accepted by the RWQCB.

(C) PDP projects must avoid critical course sediment yield areas as identified by the County or in any applicable Watershed Management Area Analysis accepted by the RWQCB, unless measures are implemented that allow critical coarse sediment to be discharged to receiving waters, such that there is no net impact to the receiving water.

(6) The following requirements apply to the use of infiltration BMPs:

(A) Infiltration BMPs shall not cause or contribute to an exceedance of applicable groundwater quality objectives as set out in the RWQCB "Basin Plan" for the San Diego area;

- (B) Runoff must undergo pretreatment such as sedimentation or filtration prior to infiltration;
- (C) Pollution prevention and source control BMPs must be implemented at a level appropriate to protect groundwater quality at sites where infiltration BMPs are to be used;
- (D) Infiltration BMPs must be adequately maintained to remove pollutants in stormwater to the MEP;
- (E) The vertical distance from the base of any infiltration BMP to the seasonal high groundwater mark must be at least 10 feet. Where groundwater basins do not support beneficial uses, this vertical distance criteria may be reduced, provided groundwater quality is maintained;
- (F) The soil through which infiltration is to occur must have physical and chemical characteristics (e.g., appropriate cation exchange capacity, organic content, clay content, and infiltration rate) which are adequate for proper infiltration durations and treatment of runoff for the protection of groundwater beneficial uses;
- (G) Infiltration BMPs must not be used for areas of industrial or light industrial activity, and other high threat to water quality land uses and activities as designated by the County , unless source control BMPs to prevent exposure of high threat activities are implemented, or runoff from such activities is first treated or filtered to remove pollutants prior to infiltration; and
- (H) Infiltration BMPs must be located a minimum of 100 feet horizontally from any water supply wells and 25 feet from any septic system or as prescribed by County of San Diego Department of Environmental Health.

(7) A priority development project shall not receive a certificate of occupancy or other final approval allowing use of the project site or any portion thereof, until after all required structural BMPs have been constructed in accordance with the PDP SWQMP, BMP Design Manual, this Chapter, and the NPDES Order.

SEC. 67.812. MAINTENANCE OF STRUCTURAL BMPs.

(a) All existing and new development shall maintain the construction BMPs and post-construction structural BMPs relied upon to achieve and maintain compliance with this Chapter and NPDES Order. The owner of the land on which the BMPs are located or the person responsible for completing the BMPs as part of a construction project shall implement, maintain or retrofit the BMPs as necessary to ensure pollutants are removed from stormwater to the MEP and all prohibited non-stormwater discharges are prevented from reaching the stormwater conveyance system or receiving waters. BMPs shall remain effective and function in the manner intended. All BMPs must be maintained to avoid the creation of nuisance or pollution associated with vectors (e.g. mosquitos, rodents, or flies).

(b) The owners and occupants of lands on which post-construction structural BMPs have been installed to meet the requirements of this Chapter and the NPDES Order shall ensure the maintenance and effective operation of those BMPs, and shall themselves maintain those BMPs if other persons or entities who are also obliged to maintain those BMPs fail to do so. The owners and occupants shall provide documentation of such maintenance and effective operation annually and as requested by the authorized enforcement official.

(c) Primary responsibility to maintain post-construction structural BMPs may be transferred through a contract or other agreement. If that contract provides that it will be submitted to the County pursuant to this Chapter as part of a development permit application, and if that contract is so submitted, the person or entity accepting a maintenance obligation in such a contract or agreement will also be legally obliged to maintain that BMP pursuant to this Chapter.

(d) For purposes of County enforcement, no contract or other agreement imposing an obligation to maintain a BMP can relieve a person or entity of any obligation to maintain a BMP imposed by this Chapter.

(e) Any developer or property owner who transfers ownership of land on which a post-construction, structural BMP is located or will be located, or who otherwise transfers ownership of a post-construction, structural BMP or responsibility for the maintenance of such a BMP to another person or entity, shall provide clear written notice registered on title of the property of the maintenance obligations associated with that BMP to the new or additional responsible party prior to that transfer.

(f) The proponents of any land disturbance activity shall provide to the County for review and approval prior to issuance of such permit, a plan for maintenance of all post-construction structural BMPs associated with the project. The plan shall specify the persons or entities responsible for maintenance activity, the persons or entities responsible for funding, schedules and procedures for inspection and maintenance of the BMPs, worker training requirements, and any other activities necessary to ensure BMP maintenance. The plan shall provide for servicing of all post-construction structural BMPs at least annually and for the retention of inspection and maintenance records for at least three (3) years.

(g) The proponents of any development project that requires a discretionary County permit shall provide to the County for review and approval prior to issuance of such permit, an executed, permanent easement onto the land on which post-construction structural BMPs will be located, and across other lands as necessary for access, to allow inspection and maintenance of those BMPs.

(h) The proponents of any project that requires a discretionary County permit shall provide to the County prior to issuance of such permit, proof of a mechanism acceptable to the County which will ensure ongoing long-term maintenance of all post-construction structural BMPs associated with the proposed project. The proponents shall be responsible for maintenance, repair and replacement of BMPs unless and until an alternative mechanism for ensuring maintenance is accepted by the County and becomes effective.

(i) The County or another public entity may accept responsibility for maintenance of any post-construction, structural BMP, under such conditions as the County or other public entity determines are appropriate. Where a maintenance obligation is proposed to be accepted by a public entity other

than the County, the County shall be involved in the negotiations with that agency, and in negotiations with the resource agencies responsible for issuing permits for the construction or maintenance of the post-construction, structural BMP. The County must be identified as a third party beneficiary empowered to enforce any such maintenance agreement.

SEC. 67.813. INSPECTION/SAMPLING.

(a) Authorized enforcement officials may inspect facilities, activities and residences subject to this Chapter at reasonable times and in a reasonable manner to carry out the purposes of this Chapter. If entry for a regulatory inspection is refused by the owner or operator, or by the occupant of a residence, an inspection warrant shall be obtained prior to inspection.

(b) When any new post-construction structural BMP is installed on private property as part of a project that requires a County permit, in order to comply with this Chapter, the property owner shall grant to the County an easement to enter the property at reasonable times and in a reasonable manner to ensure that the BMP is working properly. This includes the right to enter the property without prior notice once per year or as otherwise required by the NPDES Order for routine inspections, to enter as needed for additional inspections when the County has a reasonable basis to believe that the BMP is not working properly, to enter for any needed follow-up inspections, and to enter when necessary for abatement of a nuisance or correction of a violation of this Chapter.

(c) Inspections may include all actions necessary to determine whether any illegal discharges or illicit connections exist, whether the BMPs installed and implemented are adequate to comply with this Chapter, whether those BMPs are being properly maintained, and whether the facility or activity complies with the other requirements of this Chapter. This may include but may not be limited to sampling, metering, visual inspections, and records review. Where samples are collected the owner or operator may request and receive split samples. Records, reports, analyses, or other information required under this Chapter may be inspected and copied, and photographs taken to document a condition and/or a violation of this Chapter.

SEC. 67.814. ENFORCEMENT.

(a) General. The authorized enforcement official and each agent or deputy thereof who is assigned to duties which include the enforcement of this Chapter in the San Diego County Code of Regulatory Ordinances, and any peace officer, are authorized to enforce the provisions of this Chapter, including the activities set forth in this Section below.

(b) Order to Stop, Repair Work and Bonds. Whenever the authorized enforcement official determines that any activity regulated by this Chapter causes or threatens to cause the discharge of pollutants in stormwater, the prohibited discharge of non-stormwater to the stormwater conveyance system or receiving waters, or otherwise violate a requirement of this Chapter, he or she may order work to be stopped and/or repairs, BMPs, pollution prevention practices or other corrections to be made, by serving written notice on the owner, permittee or any person engaged in the doing or causing such activity to be performed, and such persons shall immediately stop such work until authorized by the authorized enforcement official in writing to proceed. The authorized enforcement official may require performance and payment bonds for the full cost of any repair work in a form meeting the substantive requirement for bonds specified by the County Subdivision Ordinance.

(c) Notice of Violation. The authorized enforcement official may issue and enforce Notices of Violation and Notices of Ineligibility for Land Development, pursuant to this Chapter.

(d) Administrative Remedies, Fines and Liens. The authorized enforcement official may pursue the Administrative Remedies set forth at Division 8 of Title 1 of this Code, including the issuance of Administrative Citations pursuant to Chapter 1 (commencing with Section 18.101) of said Division 8. Unpaid administrative citations may be recorded against the property on which the violation occurred and may be foreclosed in any manner allowed by State law or County ordinance for the foreclosure of liens.

(e) Arrests and Citations. The authorized enforcement official shall have the power to make arrests for violations of this Chapter and State laws which he or she has a duty to enforce, and to issue citations for such violations. Any person so arrested who does not demand to be taken before a magistrate may instead be cited in the manner prescribed in Chapter 5C (commencing with Section 853.5) of Title 3, Part 2 of the Penal Code. The authorized enforcement official may arrest an owner without warrant whenever they have reasonable cause to believe that the person arrested has committed a violation of this Chapter, provided that the officer or employee making the arrest shall have completed a course of training that meets the minimum standards prescribed by the Commission on Peace Officer Standards and Training as prescribed by Section 832(a) of the Penal Code. An officer or employee making an arrest under this Section shall follow the citation-release procedures prescribed by the Penal Code.

(f) Non-Liability. The authorized enforcement official charged with the enforcement of this Chapter, acting in good faith and without malice for the County in the discharge of his duties, shall not thereby render himself or herself liable personally and he or she is hereby relieved from all personal liability for any damage that may accrue to persons or property as a result of any act required or by reason of any act or omission in the discharge of his duties. Any suit brought against the authorized enforcement official, because of such act or omission performed by him or her in the enforcement of any provisions of this Chapter, shall be defended by the legal department of the County until final termination of the proceedings.

SEC. 67.815. VIOLATIONS - CRIMINAL PENALTIES.

(a) Any person violating any provision of this Chapter shall be deemed guilty of a misdemeanor, unless, in the discretion of the prosecutor, it is charged as an infraction. A person convicted of a third or subsequent such violation within two years from the date of the first conviction shall be deemed guilty of a misdemeanor.

(b) Any person convicted of an infraction under this Chapter shall be punished by a fine not exceeding one hundred dollars for the first violation, two hundred dollars for the second violation within one year, and five hundred dollars for each subsequent violation within one year. Any person convicted of a misdemeanor under this Chapter shall be punished by imprisonment in the County jail for a term not exceeding six months, or by a fine not exceeding one thousand dollars, or both.

(c) Each day or any portion of a day that any person violates or continues to violate provisions of this Chapter constitutes a separate offense and may be charged and punished separately without awaiting conviction on any prior offense. The penalties imposed by this Section are in addition to penalties imposed under other provisions of this Code and other County ordinances.

(d) Paying a fine or serving a jail sentence shall not relieve any owner or permittee from responsibility for correcting any condition which violates any provision of this Chapter.

SEC. 67.816. VIOLATIONS - PUBLIC NUISANCE.

In addition to any penalty prescribed for violation of this Code, any discharge of pollutants in stormwater, prohibited discharge of non-stormwater to the stormwater conveyance system or receiving waters, or act done contrary to the provisions of this Chapter is unlawful and a public nuisance. Any work performed without a Standard SWQMP, PDP SWQMP, SWPPP or other plan required by this Chapter prior to commencement of work, regardless of whether such failure is due to neglect or refusal, shall be prima facie evidence that a public nuisance has been committed. A public nuisance may be abated in accordance with the Uniform Public Nuisance Abatement Procedure contained in Chapter 2, Division 6, Title 1 (commencing with Section 16.201) of this Code or, upon order of the Board of Supervisors, the County Counsel is authorized to commence necessary proceedings provided by law to abate, remove and/or enjoin such public nuisance.

SEC. 67.817. VIOLATIONS - DENIAL OF SUBSEQUENT PERMITS AND OCCUPANCY.

Any work performed on a priority development project or land disturbance activities on a construction project performed without first obtaining a Standard SWQMP, PDP SWQMP, SWPPP or other plan required by this Chapter and any violation of one or more conditions contained in such a plan where the violation results in or threatens to result in the discharge of pollutants in stormwater or a prohibited, non-stormwater discharge to the stormwater conveyance system or receiving waters, shall be grounds for denying for five years all applications for grading permits, administrative permits, site plans, use permits, major and minor subdivisions, rezones, specific plans, specific plan amendments, general plan amendments and other land development applications proposed for the property on which the violation occurred. The "property" shall be deemed to include the lot or parcel on which the violation occurred, together with all adjacent parcels owned by the same person or entity or which are part of a common plan of development. The five-year period shall commence from the date of the violation, if documented, or from the date of discovery of the violation. The Board of Supervisors may waive the penalty imposed by this subsection, for good cause. Any such waiver, if granted, shall in no way relieve the owner or applicant for any such subsequent land development application, of their duty to include the environmental effects of the violation in any environmental analysis performed for the subsequent application, to restore or rehabilitate the site, implement such BMPs and/or pollution prevention practices as may be necessary to resolve the violation, and provide substitute or compensating resources, or perform other appropriate measures to mitigate the adverse effects of the illegal activity.

SEC. 67.818. VIOLATIONS - INJUNCTIVE OR DECLARATORY RELIEF.

In addition to or in lieu of other remedies specified in this Chapter, any violation of this Chapter may be enforced by a judicial action for injunctive or declaratory relief.

SEC. 67.819. VIOLATIONS - CIVIL PENALTIES.

(a) As part of a civil action filed by the County to enforce provisions of this Chapter, a court may assess a maximum civil penalty of \$2,500 per violation of this Chapter for each day during which

any violation of any provision of this Chapter is committed, continued, permitted or maintained by such person(s).

(b) In determining the amount of any civil liability to be imposed pursuant to this Chapter, the superior court shall take into consideration the nature, circumstances, extent, and gravity of the violation or violations, whether any discharge caused by the violation is susceptible to cleanup or abatement, and, with respect to the violator, the ability to pay, the effect on ability to continue in business, the extent of any advantage gained by an unfair business practice, any voluntary cleanup efforts undertaken, any prior history of violations, the degree of culpability, economic savings, if any, resulting from the violation, and such other matters as justice may require.

SEC. 67.820. VIOLATIONS - COST RECOVERY.

In addition to other penalties and remedies permitted in this Chapter, the following may be awarded without monetary limitations in any civil action:

- (a) Costs to investigate, inspect, monitor, survey, or litigate;
- (b) Costs to place or remove BMPs; costs to correct any violation; and costs to end any adverse effects of a violation;
- (c) Compensatory damages for losses to the County or any other plaintiff caused by violations; and/or
- (d) Restitution to third parties for losses caused by violations.

SEC. 67.821. NOTICE OF INELIGIBILITY FOR LAND DEVELOPMENT.

(a) If the authorized enforcement official believes that work has been performed on a priority development project or land disturbance activities on a construction project have been performed without first obtaining a Standard SWQMP, PDP SWQMP, SWPPP or other plan required by this Chapter and any violation of one or more conditions contained in such a plan where the violation results in or threatens to result in the discharge of pollutants in stormwater or a prohibited, non-stormwater discharge to the stormwater conveyance system or receiving waters, he or she may deliver to the owner of the property upon which the activity occurred a Notice of Intent to File a Notice of Ineligibility for Land Development with the Departments of Planning and Development Services and Public Works. The notice of intent shall be either served upon the owner personally or be both mailed (via certified mail, return receipt requested) to the owner at the address shown on the most recent tax assessment records and posted on the property. The notice of intent shall state the authorized enforcement official's intention to file the Notice of Ineligibility for Land Development, and shall fix a location, time and date (which shall not be less than fifteen days after the delivery of the notice), at which the authorized enforcement official will hold a hearing at which the owner may submit to the authorized enforcement official written comments or reasons why a Notice of Ineligibility for Land Development should not be filed. The authorized enforcement official shall hold the hearing at the appointed time, shall consider any information provided by the owner, and shall determine whether a violation occurred, whether it has been remedied, and whether to file a Notice of Ineligibility for Land Development.

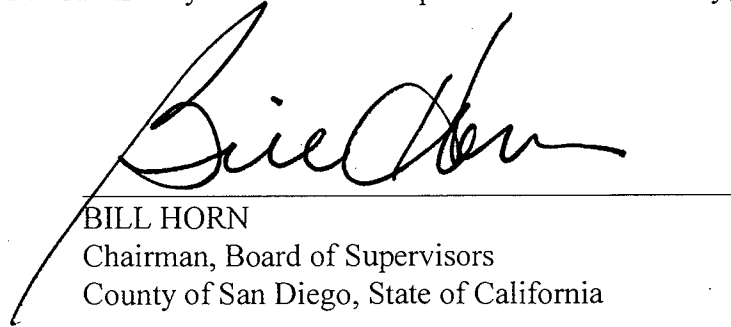

(b) If the authorized enforcement official files a Notice of Ineligibility for Land Development, and for so long as said notice remains in effect, no application for a building permit, administrative permit, site plan, use permit, variance, tentative parcel map, tentative map, parcel map or final map or any other permit for the development of the subject property shall be approved. All such applications shall be denied, and the authorized enforcement official receiving such an application shall not be required to undertake further review of the application. The "subject property" shall be deemed to include the lot or parcel on which the violation occurred, together with all adjacent parcels owned by the same person or entity or which are part of a common plan of development. The Notice of Ineligibility for Land Development shall remain in effect until the authorized enforcement official files a "Release of Notice of Ineligibility for Land Development," which the authorized enforcement official shall file when the Standard SWQMP, PDP SWQMP, SWPPP or other plan as required by this Chapter has been obtained, and that all necessary BMPs, pollution prevention practices and other site conditions or activities have been inspected and approved in writing by the authorized enforcement official as being in compliance with the requirements of this Chapter.

Section 3. Within 15 days after adoption of this ordinance, a summary hereof shall be published once, with the names of the members of this Board voting for and against the same in the San Diego Commerce, a newspaper of general circulation published in the County of San Diego. This ordinance shall be effective thirty days after its adoption.

APPROVED AS TO FORM AND LEGALITY
COUNTY COUNSEL

By: _____
Thomas L. Bosworth, Sr. Deputy County Counsel

PASSED, APPROVED, AND ADOPTED by the Board of Supervisors of the County of San Diego this 13th day of May, 2015.

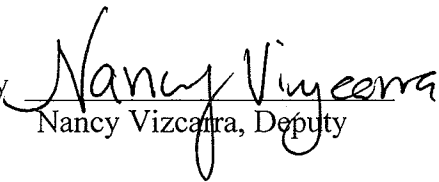

BILL HORN
Chairman, Board of Supervisors
County of San Diego, State of California

The above Ordinance was adopted by the following vote:

AYES: Jacob, D. Roberts, Horn
ABSENT: Cox, R. Roberts

ATTEST my hand and the seal of the Board of Supervisors this 13th day of May, 2015.

DAVID HALL
Clerk of the Board of Supervisors

By 
Nancy Vizcarra, Deputy

Ordinance No. 10385 (N.S.)

Jurisdictional Runoff Management Program

3.0 DEVELOPMENT PLANNING COMPONENT

3.1 INTRODUCTION

The goal of this Jurisdictional Runoff Management Program (JRMP) component is to establish a programmatic framework for the implementation of stormwater management activities in accordance with Water Quality Improvement Plans (WQIPs) strategies and other jurisdictional plans, design standards, and ordinances. By providing and implementing these programs for new land development and redevelopment projects, it is possible to minimize impacts to receiving waters and other environmental resources, and it will also comply with federal and state laws. This section provides a description of a comprehensive stormwater program the County has implemented to address land-use, development, and redevelopment elements.

3.2 LAND USE PLANNING

3.2.1 Background

The County of San Diego's General Plan is the comprehensive long-range plan that provides the framework for development planning in the County Unincorporated area. The General Plan addresses all aspects of the development process, including housing, traffic, safety, public facilities, land use, natural resources, and open space. In accordance with state law, all land use regulations and decisions made by the County must be consistent with the General Plan.

The Watershed Protection Ordinance (WPO) [Title 6, Division 7, Chapter 8, Section 67.801-67.821] provides the County legal authority to regulate stormwater activities as they relate to land use, development and redevelopment. The WPO (Attachment 2.2) defines the Best Management Practices (BMPs) for planning, design, and post-construction for all projects. The land development process typically requires environmental assessment, project review and recommendation, and hearing body approval. The WPO is one of many local regulations that all projects must comply with through the planning process.

In addition to the over-arching land use regulations, watershed protection for land development is achieved through an action plan known as the BMP Design Manual. The BMP Design Manual is a jurisdictional requirement of the 2013 MS4 Permit which provides the planning framework and guidance for stormwater management on all development and redevelopment sites. The BMP Design Manual establishes rules for the proper design and layout of development plans. Within the BMP Design Manual are policies and recommendations including: site design and source control practices, stormwater pollution control BMPs, and hydromodification management BMPs. The WPO, MS4 Permit, and Construction General Permit (CGP) all establish requirements for BMPs while the BMP Design Manual provides the planning method and guidance in which to meet the requirements. The BMP Design Manual contains the Stormwater Quality Management Plan (SWQMP) template for use by project applicants to select appropriate BMPs for each project site. The County's BMP Design Manual will not become effective until December 2015, and until that time, the jurisdictional Standard Urban Stormwater Mitigation Plan (SUSMP) will continue to serve as the equivalent interim document. The County's BMP

Jurisdictional Runoff Management Program

Design Manual can be accessed on the internet at <http://www.sandiegocounty.gov/content/sdc/dpw/watersheds.html>.

The stormwater planning hierarchy is demonstrated in Figure 3-1.

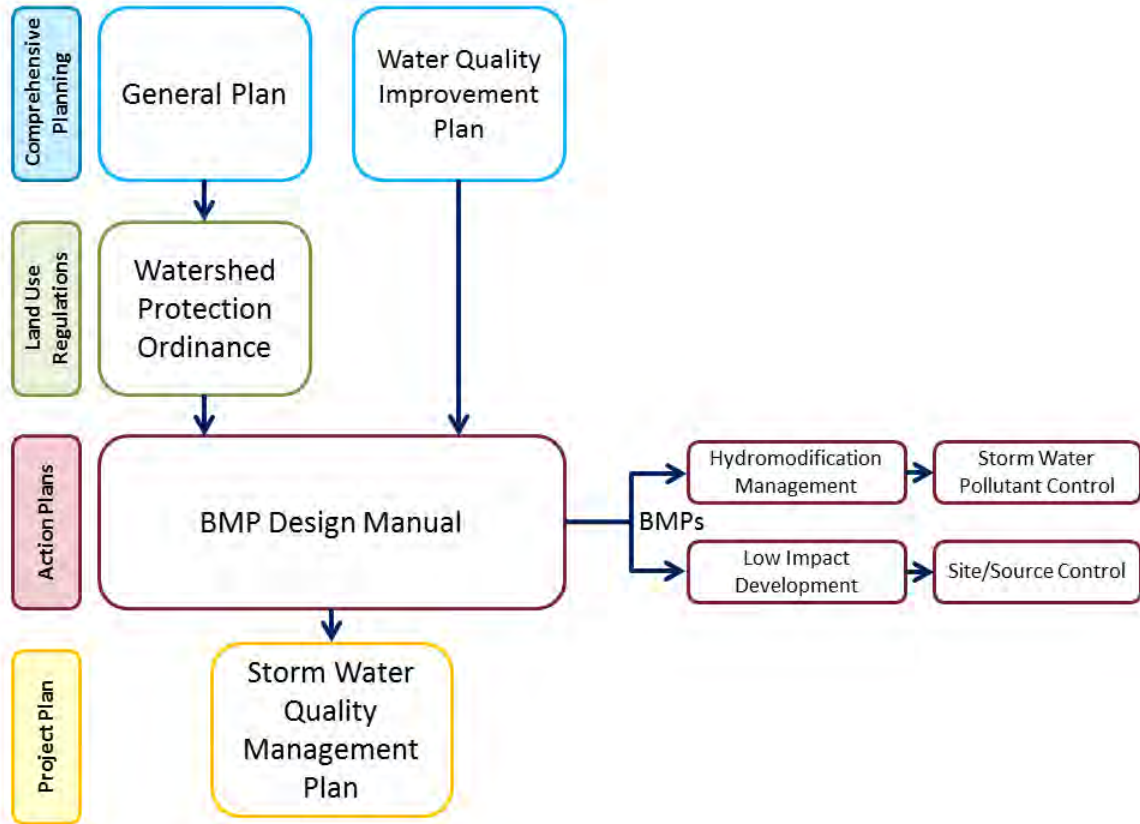

Figure 3-1 - Planning Hierarchy for Stormwater Management

The following sections discuss these components of the land development planning process.

3.2.2 Source Characterization

Urban development can negatively impact water quality and watershed health by increasing impervious surface area and by introducing new pollutant sources and pollutant-generating activities that accompany different types of land use. Changes in land surface characteristics through development changes the natural course of stormwater runoff by altering the runoff velocity and volume. These changes increase the potential for erosion and also become mechanisms of collection and transport for pollutants that are from various anthropogenic sources such as trash, oils and grease from vehicle use, fertilizers and pesticides from landscape management, erosion and sedimentation from soil disturbance, wash water, and wastes from materials management. The General Plan specifies the type and intensity of land uses allowed in the County Unincorporated area. Certain land use types have anticipated categories of pollutants associated with their use that can have varying levels of impacts on water quality. Industrial land

Design Manual can be accessed on the internet at <http://www.sandiegocounty.gov/content/sdc/dpw/watersheds.html>.

The stormwater planning hierarchy is demonstrated in Figure 3-1.

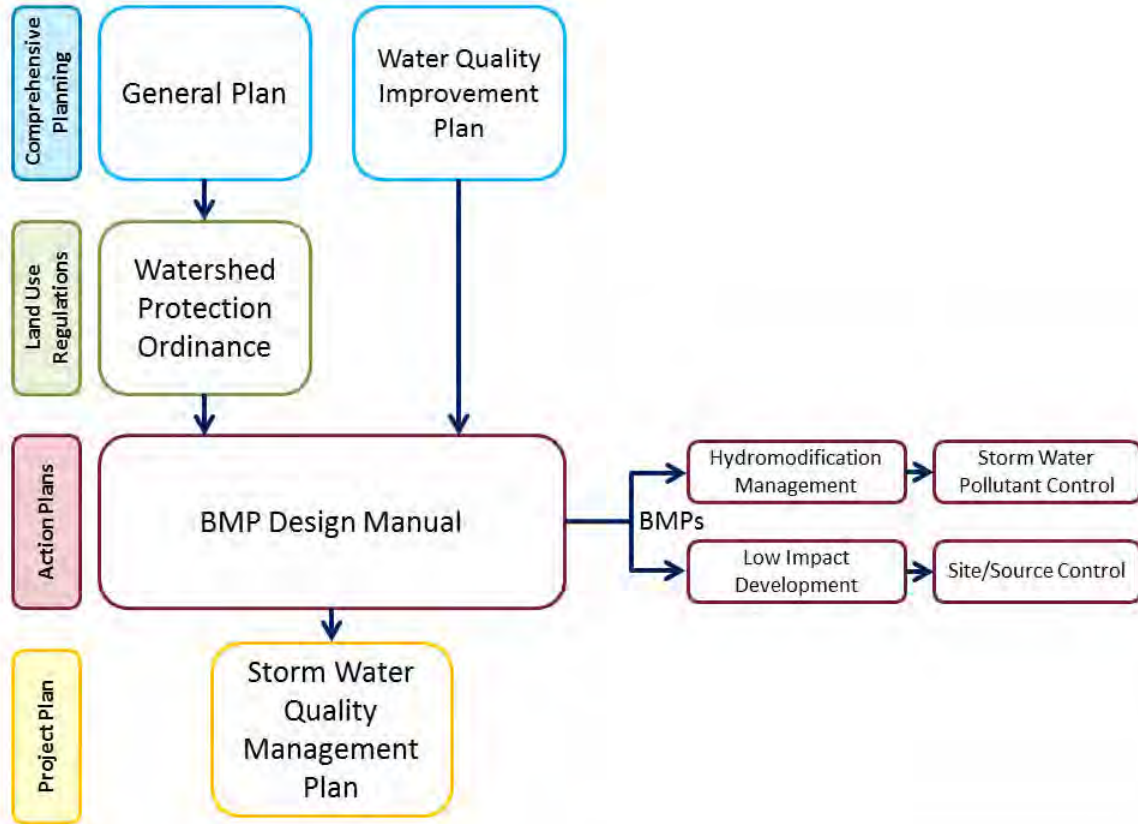

Figure 3-1 - Planning Hierarchy for Stormwater Management

The following sections discuss these components of the land development planning process.

3.2.2 Source Characterization

Urban development can negatively impact water quality and watershed health by increasing impervious surface area and by introducing new pollutant sources and pollutant-generating activities that accompany different types of land use. Changes in land surface characteristics through development changes the natural course of stormwater runoff by altering the runoff velocity and volume. These changes increase the potential for erosion and also become mechanisms of collection and transport for pollutants that are from various anthropogenic sources such as trash, oils and grease from vehicle use, fertilizers and pesticides from landscape management, erosion and sedimentation from soil disturbance, wash water, and wastes from materials management. The General Plan specifies the type and intensity of land uses allowed in the County Unincorporated area. Certain land use types have anticipated categories of pollutants associated with their use that can have varying levels of impacts on water quality. Industrial land

Jurisdictional Runoff Management Program

use types, for example, typically have pollutants on site and have an increased potential for pollutants to move off the site. Table 3.1 below identifies the anticipated and potential pollutants of concern for each of the land use types.

Table 3.1 - Anticipated Pollutants of Concern Generated by Land Use Type

Priority Project Categories	General Pollutant Categories								
	Sediments	Nutrients	Heavy Metals	Organic Compounds	Trash & Debris	Oxygen Demanding Substances	Oil & Grease	Bacteria & Viruses	Pesticides
Detached Residential Development	X	X			X	X	X	X	X
Attached Residential Development	X	X			X	P ⁽¹⁾	P ⁽²⁾	P	X
Commercial Development >1 Acre	P ⁽¹⁾	P ⁽¹⁾	X	P ⁽²⁾	X	P ⁽⁵⁾	X	P ⁽³⁾	P ⁽⁵⁾
Heavy Industry	X		X	X	X	X	X		
Automotive Repair Shops			X	X ⁽⁴⁾⁽⁵⁾	X		X		
Restaurants					X	X	X	X	P ⁽¹⁾
Hillside Development >5,000 ft ²	X	X			X	X	X		X
Parking Lots	P ⁽¹⁾	P ⁽¹⁾	X		X	P ⁽¹⁾	X		P ⁽¹⁾
Retail Gasoline Outlets			X	X	X	X	X		
Streets, Highways & Freeways	X	P ⁽¹⁾	X	X ⁽⁴⁾	X	P ⁽⁵⁾	X	X	P ⁽¹⁾
X = anticipated P = potential (1) A potential pollutant if landscaping exists on-site (2) A potential pollutant if the project includes uncovered parking areas (3) A potential pollutant if land use involves food or animal waste products (4) Including petroleum hydrocarbons (5) Including solvents									

3.2.3 Best Management Practice Requirements

Many land use regulations and restrictions are put in place by jurisdictions to protect resources and beneficial uses. In addition to protecting surface water quality, the County is responsible for protecting the aesthetics, biological resources, mineral resources, agricultural resources, cultural resources, recreational spaces, air quality, geological resources, as well as planning for population housing and providing adequate transportation routes within the region. Through this planning process, the County decides how to use and protect natural resources, financial capital, and people to achieve and maintain healthy communities and a high quality of life. Protecting surface water and groundwater quality through land use regulations is one of the goals of the General

Jurisdictional Runoff Management Program

Plan and through the County's many land use regulations "best management practices" are being implemented. WQIPs may also identify additional minimum BMPs intended to target specific high priority pollutants.

3.2.4 Program Implementation

3.2.4.1 General Plan

The General Plan provides effective water quality and watershed protection principles and policies. These principles and policies assist in directing land use decisions and require implementation of consistent water quality protection measures for Development Projects.

In response to the requirements of the 2007 MS4 Permit, the County analyzed its General Plan to assess the effectiveness of existing goals and policies related to water quality, watershed protection, and stormwater pollution. The County comprehensively updated the General Plan by developing goals and policies to protect water quality and watersheds, and to minimize stormwater pollution. These future goals and policies replaced those found in the existing regional elements, as well as some of the Community Plans, and are primarily addressed in the Conservation and Open Space Element (general water management and protection and maintenance of water resources policies), the Mobility Element (low impact development applications for roadways), and the Safety Element (floodplain and floodway management). The most recent General Plan was adopted by the County Board of Supervisors on August 3, 2011.

3.2.4.2 Watershed Protection Ordinance (WPO) Update

The WPO establishes stormwater requirements for managing and controlling discharges on existing sites and development sites. The WPO was last amended and approved by the County of San Diego's Board of Supervisors in June 2015. The WPO update includes new requirements for pollutant control BMPs, as well as the definition of Priority Development Projects. The most current version of the WPO is incorporated by reference in the BMP Design Manual.

3.2.4.3 BMP Design Manual

3.2.4.3.1 Model Regional BMP Design Manual

The Copermittees organized a formal workgroup to oversee the development of the Model BMP Design Manual. The manual is based on the previous Model SUSMP and it incorporates the new requirements in the 2013 MS4 Permit. New requirements for development projects relate to retention and re-use, biofiltration, and Priority Development Project (PDP) categories. The manual will also incorporate the requirements and methodology from the regional Hydromodification Management Plan (HMP) and critical coarse sediment yield area protection.

3.2.4.3.2 Local BMP Design Manual

In an effort to facilitate the submittal of an updated local BMP Design Manual for all jurisdictions, the Copermittees collaborated on the development of a model BMP Design Manual for regional consistency. The local BMP Design Manual update includes updated BMP requirements, including:

Jurisdictional Runoff Management Program

1. Retention/re-use of runoff from the 85th percentile storm event;
2. Revised BMP classification and naming;
3. Alternative compliance options, if adopted by the County; and
4. Avoidance of critical coarse sediment areas.

The County's BMP Design Manual can be accessed on the internet at <http://www.sandiegocounty.gov/content/sdc/dpw/watersheds.html>

3.2.4.3.3 Low Impact Development

The County's *Low Impact Development Handbook—Stormwater Management Strategies* document was created in 2007 and then updated in July 2014 by a multidisciplinary Technical Advisory Committee. The document serves as a guidance document for the planning, application, design, and maintenance of low impact development (LID) BMPs. LID feasibility and applicability criteria and specific LID requirements are specified in the BMP Design Manual.

3.2.4.3.4 Hydromodification Management Plan (HMP)

The Final Hydromodification Management Plan (Final HMP) for the region was approved in March of 2011 and subsequently incorporated in the County SUSMP. The BMP Design Manual has been developed to supersede and replace both the Final HMP and the County SUSMP. The Final HMP will still be made available as a reference since it documents in detail the process that was used to develop the design requirements.

One change to the hydromodification management requirements in the 2013 MS4 Permit is the avoidance of critical sediment yield areas. The BMP Design Manual includes the criteria for demonstrating compliance with this requirement.

3.2.4.3.5 Alternative Compliance

Pursuant to 2013 MS4 Permit Section E.3.c.(3), the County may elect to develop and implement an offsite alternative compliance program. Under an alternative compliance program, public and private project proponents may be allowed to utilize offsite projects to satisfy treatment or hydromodification requirements in lieu of fully mitigating post-project runoff conditions onsite. A variety of offsite project types such as BMP retrofits, land purchases, and stream rehabilitation might be used to satisfy these requirements. The 2013 MS4 Permit allows the development of in lieu fee structures and water quality credit systems as potential options for meeting these obligations. Credit systems require Regional Board review and acceptance.

3.2.4.3.6 Submittals

The Copermittees anticipate submitting the BMP Design Manual to the Regional Board by June 27, 2015, for its review. The BMP Design Manual will be available on the Regional Clearinghouse within 30 days of submittal and implemented within 180 days of the submittal.

Jurisdictional Runoff Management Program

3.3 ENVIRONMENTAL REVIEW PROCESS

All County discretionary permit applications undergo environmental review prescribed by the California Environmental Quality Act (CEQA). Part of this review involves an assessment of the project's potential water quality direct and cumulative impacts, which are documented on a CEQA Initial Study-Environmental Checklist Form. Section IX of this checklist includes review questions specific to hydrology and water quality (Attachment 3.1). For each question, staff will review the project proposal and determine if the project will have: "No Impact," "Less Than Significant Impact," "Less Than Significant With Mitigation Incorporated," or a "Potentially Significant Impact." For each determination, a description of the impact significance is included.

To determine the threshold for significance, the County created *Guidelines for Determining Significance* under CEQA to provide a consistent, objective, and predictable evaluation of whether development projects in the County Unincorporated area will have "significant" environmental impacts. These significance determinations provide the guidance for answering the questions in each section of the Initial Study. Section IX of the Initial Study pertains to Hydrology and Water Quality, where the answers to potential impacts are grouped in four categories: (1) Potentially Significant Impacts, (2) Potentially Significant Impact Unless Mitigation Incorporated, (3) Less than Significant Impact, and (4) No Impact. The complete CEQA Initial Study – Environmental Checklist Form for Hydrology and Water Quality is located in Attachment 3.1. Findings of significance generally lead to additional requirements for environmental review and/or mitigation. The *Surface Water Quality Guidelines* are used to evaluate whether a discretionary project may have adverse effects on surface water quality. The Guidelines provide an overview of local watersheds, summarize existing federal and state regulations, describe typical pollutant effects on water quality, and present guidelines to determine significance under CEQA. The following five guidelines are used to determine significance under CEQA, each of which is described in greater detail in the document:

1. The project is a development project listed in County of San Diego, Code of Regulatory Ordinances (Regulatory Ordinances), Section 67.802(i), as amended, and does not comply with the standards set forth in the Additional Planning, Design and Post-Construction Requirements for Development Projects, Regulatory Ordinances Section 67.810, as amended, or the Additional Requirements for Construction Projects set forth in Regulatory Ordinances, Section 67.809.
2. The project would drain to a tributary of an impaired water body listed on the Clean Water Act Section 303(d) list, and will contribute substantial additional pollutant(s) for which the receiving water body is already impaired.
3. The project would drain to a tributary of a drinking water reservoir and will contribute substantially more pollutant(s) than would normally runoff from the project site under natural conditions.
4. The project will contribute pollution in excess of that allowed by applicable State or local water quality objectives or will cause or contribute to the degradation of beneficial uses.

Jurisdictional Runoff Management Program

5. The project does not conform to applicable federal, state, or local “Clean Water” statutes or regulations including, but not limited to, the federal Water Pollution Control Act, California Porter-Cologne Water Quality Control Act, and the County of San Diego Watershed Protection, Stormwater Management, and Discharge Control Ordinance (WPO).
6. The project is located within critical coarse sediment yield areas as mapped in the Watershed Management Area Analysis.

Once significance has been established using the Initial Study Form and the Guidelines, the Project Manager will give the applicant the opportunity to redesign the project to reduce any findings of significance to less than significant. For example, if a “Potentially Significant Impact” is selected on the CEQA Initial Study Form for Water Quality, the project proponents are directed to use the BMP Design Manual and other water quality guidelines to increase mitigation through other project design considerations, BMPs, and/or LID techniques. Once the project design has been negotiated and finalized, a formal CEQA document is created and the project will be given either a CEQA Exemption (no impacts), Negative Declaration (less than significant impacts), Mitigated Negative Declaration (less than significant impacts with mitigation incorporated), or Environmental Impact Report (potentially significant impacts).

3.4 DEVELOPMENT PROJECT APPROVAL AND VERIFICATION PROCESS

3.4.1 Background

As described in the Land Use Planning section 3.2, the WPO establishes the County’s legal authority to regulate stormwater methodologies as outlined by the MS4 Permit. The WPO, in conjunction with the WQIPs, General Plan, and BMP Design Manual, defines the stormwater requirements for managing and controlling discharges and establishes rules for the proper design and layout of development plans. The WQIPs will set forth the jurisdictional planning framework, and the BMP Design Manual will establish specific design requirements for private and municipal stormwater management on development sites. Within the BMP Design Manual are policies and recommendations for BMPs including: source, site, treatment, hydromodification, and LID BMPs. The BMP Design Manual contains the templates for a Standard Stormwater Quality Management Plan (Standard SWQMP) and a Priority Development Project Stormwater Quality Management Plan (PDP SWQMP) for use by project applicants to select appropriate BMPs for each project site.

The County BMP Design Manual is intended for use on both large and small projects processed through the County’s Planning and Development Services (PDS) Project Planning Division, Building Division or Land Development Division. The application of the BMP Design Manual is not limited to Priority Development Projects, but distinguishes those projects from other minor development projects through the requirements of the SWQMP. The BMP Design Manual also applies to County capital improvement projects.

Jurisdictional Runoff Management Program

2013 MS4 Permit Provision E.3.a sets out minimum requirements which must be addressed on a project basis during the approval process. This section describes the application of the County's local BMP Design Manual and project approval process which ensures applicable standards are met for all projects.

3.4.2 Source Characterization

On a project level, water quality impacts may appear to be relatively insignificant. However, when these impacts are considered in context with the cumulative effects of urban development, water quality impacts may become quite significant. Project by project, urban development changes water quality and watershed health by cumulatively increasing impervious surfaces in a region and by introducing new pollutant-generating activities associated with the land use. Land use categories such as automotive repair shops, parking lots, hillside development, and retail gasoline outlets typically have pollutants on site that have an increased potential for pollutants to affect receiving waters. By characterizing each source on a project level and mitigating the effects, cumulative impacts can be reduced to the maximum extent practicable (MEP). Table 3.1 identifies the anticipated pollutants of concern by priority project category.

3.4.3 Best Management Practice Requirements

As defined in the WPO, each proposed project is required to implement measures to ensure that (1) pollutant discharges and runoff flows from development are reduced to the maximum extent practicable; (2) receiving water quality objectives are not violated throughout the life of the project; and (3) runoff flows from development are managed to reduce erosive forces that may impact surface water beneficial use and/or habitat. The project SWQMP determines the anticipated pollutants associated with the development and mitigates for these impacts with proposed BMPs.

3.4.3.1 BMP Requirements for All Development Projects

The BMP Design Manual established the minimum BMP requirements that are applicable to all development projects, regardless of size or type. These measures include general BMP siting, source control BMPs, and site design BMPs.

3.4.3.2 Additional Requirements for Priority Development Projects

The 2013 MS4 Permit requires that Copermittees impose additional requirements on those projects that are considered Priority Development Projects (PDPs). The definition of a PDP is included in the BMP Design Manual. PDPs are required to comply with structural BMP performance requirements specified in the BMP Design Manual. These additional requirements focus on retention of the 85th percentile storm event. If on-site retention is not feasible, other alternatives are available including partial retention and biofiltration.

Jurisdictional Runoff Management Program

PDPs are also required to comply with hydromodification management BMP requirements, as specified in the BMP Design Manual, which address flow duration impacts and critical sediment yield areas.

3.4.3.3 Priority Development Project Exemptions

In some cases, projects can be determined to be exempt from being defined as a PDP. These include sidewalks, bicycle lanes, or trails that direct runoff to adjacent landscaping, are hydraulically disconnected from the street, or are designed and constructed in accordance with USEPA Green Streets guidance. Exemptions may also be provided for street improvements that are designed and constructed in accordance with USEPA Green Streets guidance. Detailed explanations of the exemption criteria are included in the BMP Design Manual.

3.4.3.4 Low Impact Development (LID) Site Design Practices

The WPO has incorporated LID Site Design BMP requirements in Section 67.806 “General Best Management Practice Requirements” to be applicable to all development projects with the potential to add pollutants to stormwater or to affect the flow rate or velocity of stormwater runoff. This requirement defines the general standard for LID Site Design. The more explicit LID Site Design requirements for PDPs have been included in Section 67.810 and 67.811 “Additional Planning, Design and Post-Construction Requirements for Development Projects.” The BMP Design Manual includes a discussion of LID Site Design requirements.

3.4.3.5 Maintenance Requirements for Structural BMPs

The WPO establishes the maintenance requirements of BMPs for all existing and new development permanent BMPs. Section 67.812 establishes requirements for maintenance plans, review of plans, easements, proof of mechanism to ensure long-term maintenance, and enforcement. Chapter 7 of the BMP Design Manual provides the specific details related to maintenance responsibility and BMP Maintenance Plans. In addition, the BMP Design Manual lays out several acceptable mechanisms for verifying BMP maintenance, as follows:

- Maintenance Notification;
- Maintenance Agreements; and/or
- New Community Facilities District or other Special District.

The County in its discretion may decline to accept any proposed mechanism for assuring BMP maintenance, repair, or replacement that is not supported by an adequate and reliable source of funds.

3.4.3.6 Updates to BMPs

As new BMP technologies evolve, the County will consider the adoption of BMPs that are used by Caltrans or other agencies and those that have been proven to meet industry standards.

Jurisdictional Runoff Management Program

3.4.3.7 *Alternative Compliance to Onsite Structural BMP Implementation*

The 2013 MS4 Permit allows for each Copermitee to allow Priority Development Projects to participate in an alternative compliance program instead of fully implementing onsite structural BMPs. If the County adopts this program, in order for projects to participate in the program, they must enter into a voluntary agreement with the County and it must be determined that the alternative compliance improvements will have a greater overall water quality benefit than onsite compliance. Use of alternative compliance does not relieve the project of the requirement to provide onsite flow-through treatment control BMPs to treat the portion of the design capture volume that is not retained onsite.

3.4.4 Program Implementation

3.4.4.1 *Stormwater Quality Management Plan (SWQMP) Project Review and Approval*

Through the implementation of the BMP Design Manual, projects are brought into compliance with the WPO and the 2013 MS4 Permit, as well as the strategies and priorities of the WQIPs. Compliance is accomplished through a series of review processes throughout the County’s Land Use Environmental Group (LUEG) Departments and Divisions. The sections below discuss these review processes for private and capital improvement projects. Table 3.2 provides a list of County staff and their associated responsibilities for ensuring implementation of a successful stormwater program.

3.4.4.1.1 *Private Development Projects*

Table 3.2 - Program Implementation Roles and Responsibilities

To ensure compliance with the 2013 MS4 Permit and WPO, and consistency with the other related County plans (General Plan, WQIPs, JRMP and BMP Design Manual), County staff routinely reviews project inventories, BMP requirements, and implementation strategies associated with the plans. The Department of Public Works (DPW) Watershed Protection Program (WPP) may assist in coordinating with other County staff in PDS and DPW to update and administrate these plans when necessary.

The following sections describe the different activities associated with the facilitation of the project review process, education of stormwater requirements, and BMP implementation.

The County offers pre-application and initial consultation meetings for private projects to assist applicants who anticipate filing a discretionary land use permit application (pre-applications required for large projects such as Tentative Maps and Major Use Permits and optional initial consultations for smaller projects). The purpose of the pre-application and initial consultation meeting is to advise the applicant of potential issues, constraints, and requirements that could be connected with the filing of an application. As part of the pre-application and initial consultation meeting for discretionary projects, GIS tools and preliminary project descriptions are used as part of preliminary assessment of stormwater pollution potential. Applicants will then be advised of filing requirements, general processing timelines, general cost estimates, and the requirements of the WPO as they could affect their project, including the requirement of the preparation of a Stormwater Quality Management Plan.

Jurisdictional Runoff Management Program

Private Project Application Intake

Private project applicants will submit all project information to the zoning counter (discretionary) or building counter (ministerial). Application packets vary in size and scope based on the type of project being submitted. However, most discretionary and ministerial projects require the submittal of either a Standard Stormwater Quality Management Plan (Standard SWQMP) or a Priority Development Project Stormwater Quality Management Plan (PDP SWQMP), and projects that require a grading plan must also submit a hydrology/drainage study as explained in the SWQMP section.

Stormwater Quality Management Plan

In accordance with the WPO, the County requires the development of a SWQMP to be submitted with discretionary and ministerial permit applications. Guidance on the preparation of a SWQMP is provided to all applicants.

The purpose of the SWQMP is to mitigate stormwater impacts by identifying effective permanent BMPs for implementation. The SWQMP review process takes into account the project location, receiving water quality, anticipated project impacts and associated pollutants, and mitigation for impacts with the selection of BMPs. The SWQMP provides needed information to address both stormwater and non-stormwater issues. The Preliminary Grading Plan and Preliminary Hydrology/Drainage Study are an integral part of the SWQMP and provide the technical basis for the SWQMP (see below). However, changes and refinements to the SWQMP may be required as technical review of the application and CEQA documentation continues. The SWQMP requires but is not limited to the following elements:

- Water Quality Pollutants of Concern, Treatment Volume Based on Water Quality Design Storm, Site Plans and Adjacent Land Use, and Soil Characteristics;
- Mitigation Measures to protect water quality, Pollution Prevention BMPs (MEP Based), Site Design BMPs, Source Control BMPs, LID BMPs, and Structural Treatment BMPs;
- Mitigation Measures to prevent increases in downstream erosion to MEP, Site Design BMPs, Source Control BMPs, LID BMPs, and Structural Treatment BMPs;
- Any infiltration BMPs proposed for use on site; and
- Agreements, easements, licenses relating to proposed BMP construction, location, maintenance, or changes in drainage character.

Prioritization

The County utilizes two types of stormwater quality management plans based on the project prioritization. Projects are prioritized using the 2013 MS4 Permit definition of “Priority Development Project” in Provision E.3.b.(1) and “Special Considerations for Redevelopment Projects” in Provision E.3.b.(1). Projects that meet either of these definitions must utilize the BMP Design Manual and create a PDP SWQMP for the project. The PDP SWQMP will

Jurisdictional Runoff Management Program

establish the construction activity prioritization for inspection and the application of structural BMPs. As part of this process, County staff will review the PDP SWQMP along with the Preliminary Grading Plan and additional hydrologic information submitted with the Project's application package to determine what issues should be further addressed.

A Standard Stormwater Quality Management Plan (Standard SWQMP) is used for all development and redevelopment projects that do not meet the 2013 MS4 Permit definition of Priority Development Project. These projects are regarded as insignificant contributors to post-construction pollutant loading and for projects that are substantially complete or not located in urban areas, such as many of those that come through the Building Permit (ministerial) process. SWQMP completion helps to ensure that effective BMPs are implemented; changes and refinements to the SWQMP may be required as technical review of the application and completion of CEQA documentation continues.

Hydrology/Drainage Study

Project proposals that will involve a grading permit must provide a Preliminary Grading Plan. This Grading Plan must include a Preliminary Hydrology/Drainage Study prepared by a Registered Civil Engineer. In certain instances, a Preliminary Hydrology/Drainage Study may be requested to supplement a SWQMP even though the application does not require a grading permit. Staff will utilize all of these studies to evaluate necessary stormwater requirements, including but not limited to site design, LID, source control, and structural BMPs. The Preliminary Hydrology/Drainage Study must include but is not limited to identification of:

- Pre- and post-construction hydrology onsite and downstream;
- Any potential discharges of stormwater offsite and/or any increased potential for downstream erosion; and
- All structural BMPs required to address stormwater issues in compliance with the WPO and the 2013 MS4 Permit.

SWQMP Tracking

SWQMP tracking is managed in the Accela Automation management software system. This database allows PDP and Standard SWQMPs to be tracked. The database provides the County with the means to track and prioritize a watershed-based inventory.

Review of Project Application

Upon submittal of a private project application, the SWQMP is reviewed for compliance with the WPO, General Plan, WQIPs, and BMP Design Manual by the PDS Land Development Division, and by the PDS Project Planning Project Manager. The SWQMPs for Department of Parks and Recreation (DPR) and DPW Capital Improvement Projects (CIP) are reviewed by WPP. At the discretion of the Department of General Services (DGS), the projects are reviewed by PDS-Land Development and the construction is overseen by DPW PDCI and PDS-Building. For private

Jurisdictional Runoff Management Program

projects, DPW staff assists the assigned Project Manager with the technical review of the project application for stormwater compliance. All projects are reviewed using the County's desktop-based GIS application, existing regional land use maps, and other related resources including the prioritization criteria from 2013 MS4 Permit Provision E.3.b.(1) and Provision E.3.b.(2).

CEQA Review

As part of this review, staff will complete CEQA review using an Initial Study – Environmental Checklist Form. Section IX of this checklist includes review questions specific to Hydrology and Water Quality (Attachment 3.1). A complete discussion on determining surface water quality significance under CEQA is covered above in Section 3.3.

Maintenance Agreements

To ensure proper operation and ongoing maintenance of structural BMPs, maintenance notifications or agreements are required. Category 1-type facilities are generally for simple-to-maintain and simple-ownership BMPs that would have a low likelihood for noticeably impacting the receiving water if there was a failure. This notification is registered on title to ensure each subsequent property owner is notified of their responsibility to maintain a structural BMP. A Category 2-type BMP may be more complicated in its ownership or maintenance responsibility and may have a slightly higher risk of impacting the receiving water, if there is a failure. This Agreement is registered on title; has an easement to permit the County to maintain the BMP and money is held for the maintenance of the BMP if it is deemed necessary by the County. Category 3-type BMPs are considered the most risk to the receiving water if there is a failure, so the County takes over the responsibility to maintain and puts in place a mechanism to collect funds for the maintenance. The Maintenance notification and agreement process and procedures is detailed in the County of San Diego's BMP Design Manual.

Conditions of Project Approval

Recommendations from CEQA review and SWQMP that require permanent BMPs for water quality mitigation are then used in formulating conditions of approval for the project. The conditions will typically specify that the requirements of the SWQMP be implemented. The conditions are structured to assure that grading or other activities that could threaten water quality or contribute to contaminated stormwater runoff will not be allowed until all required BMPs and other mitigating actions are included in the SWQMP to the satisfaction of the County.

In addition, if the proposed structural BMPs require long-term maintenance, the applicant will be required to take all necessary measures, to satisfy the County, to assure that ongoing maintenance will occur to prevent water quality pollution. The BMP Design Manual identifies several methods of meeting this requirement which may be accepted by the County.

Jurisdictional Runoff Management Program

Final SWQMP BMP Verification (prior to occupancy)

The verification that BMPs have been constructed in compliance with all specifications, plans and permits for all projects subject to the BMP Design Manual occurs upon the completion of the following construction activity:

1. At the end of grading activities; and
2. At the end of building activities.

The County has established Director's Letters of Instruction (DLIs) for transferring privately constructed PDP projects to the Watershed Protection Program for the County's structural BMP maintenance verification inventory (DLI-LD-W), or to the Flood Control District (DLI-LD-S).

3.4.4.1.2 Capital Improvement Projects

Department of Public Works

Program Planning and Administration:

To ensure compliance with the 2013 MS4 Permit and the various County planning documents and ordinances (General Plan, Watershed Protection Ordinance, Grading Ordinance, WQIPs, JRMP, BMP Design Manual), DPW CIP engineering staff reviews these documents and develops project design strategies that conform to the stormwater requirements prescribed. CIP projects typically involve construction activities that disturb soil and generate sediment and possibly other pollutants. Stormwater runoff from CIP project sites is managed to minimize erosion and sediment transport and prevent water quality degradation. Implementation of MS4 permit and CGP requirements begins in the early phases of project development and continues throughout the life of the project. Engineering staff evaluates a project's stormwater management needs for both the construction period and post-construction period with consideration to the project's scope. Staff utilizes a SWQMP Intake Form to help evaluate the project type and to determine if it is a priority or standard development project. Depending on the result, staff will then complete a Standard or PDP SWQMP. The plan conforms to the MS4 and to the Construction General Permit, and describes which stormwater management methodologies and practices are to be utilized for the project. Priority Development Projects require additional hydromodification design considerations and critical course sediment yield area protection. Throughout the project design process, reviews by other County sections are offered at the various stages. DPW CIP staff ensures that the County's Watershed Protection Program and Field Operations staff review the project storm water impacts, if any, and provide input during these times. A CEQA determination is provided by the County's Environmental Services Unit once the project design elements are complete.

Facilitation Activities:

DPW CIP develops project plans, specifications and estimates. Part of the plan set includes a Conceptual Water Pollution Control Plan. This is developed to determine BMP quantities for bidding purposes and also serves as guidance for the selected contractor to develop their own plan

Jurisdictional Runoff Management Program

prior to construction. If a project disturbs over an acre of soil, the contractor develops a SWPPP from a template available on the County web site. If the project is under an acre, a basic Water Pollution Control Plan (WPCP) is developed. Projects disturbing over 1 acre of soil are required to acquire a Notice of Intent (NOI) from the Regional Board and must submit project registration documents (PRDs) via the State's SMARTS system. During construction, County staff inspects the project for compliance with the plans and specifications, including stormwater requirements. Inspections are conducted and reports completed. Stormwater training is provided by the contractor on a recurring basis. As needed, Rain Event Action Plans (a.k.a. Weather Triggered Action Plans) are developed and implemented during construction. Water quality sampling is conducted during rain events. Reports are provided to the Regional Board according to the requirements of the Construction General Permit. The Maintenance Acceptance Memorandum (illustrated in attachment of DLI-LD-W) is used to notify WPP to add structural BMPs to their maintenance tracking inventory and to provide the maintaining party maintenance Fact Sheets for the BMP once the project is constructed for their use.

Feedback and Verification:

Feedback and verification are performed in numerous ways. Towards the end of the design process, numerous check lists and transmittals are completed to ensure completion of a variety of tasks. These checklists are necessary to ensure completion of tasks prior to project construction advertisement. For projects disturbing over 1 acre of soil, PRDs are uploaded into the State's SMARTS system and an NOI is acquired. A maintenance plan is developed in conjunction with the maintaining party and maintenance responsibility is identified when construction is complete. On a yearly basis, project data is provided to the Watershed Protection group for their use in reporting to the State.

More detail on the implementation of the MS4 and CGP can be found in DLI ES-N. Detail on transferring structural BMP maintenance responsibilities to the maintaining party can be found in DLI ES-G.

Department of General Services

To ensure compliance with the 2013 MS4 Permit and WPO, and consistency with the other related County plans (General Plan, WQIPs, JRMP and BMP Design Manual), County staff routinely reviews project inventories, BMP requirements, and implementation strategies associated with the plans. The Watershed Protection Program may assist in coordinating meetings with other County staff in DGS to update and administrate these plans when necessary.

The Department of General Services Division has an established internal procedure for design, transfer, and maintenance of structural BMPs installed at DGS-CIP projects. The DGS Project Manager (PM) is responsible for project compliance with the County plans. A licensed engineer will provide the SWQMP and structural BMP requirements in conjunction with the Facilities Operations staff that will accept and maintain all structural BMPs. At conclusion of the project, the structural BMPs will be inspected by the PM, the DGS Inspector, the design engineer, and

Jurisdictional Runoff Management Program

Facilities Operations staff. An Acceptance Memorandum is signed and distributed to notify WPP to add structural BMPs to their maintenance tracking inventory and to notify the maintaining party the responsibility for maintaining the structural BMPs has been transferred to them.

Department of Parks and Recreation

When DPR Development initiates a project, DPR uses the BMP Design Manual checklist to determine if the project will require a Standard or PDP SWQMP. Typically, DPR projects do not include impervious surfaces that trigger the impervious surface threshold for a PDP SWQMP. In events where DPR is developing a new project adjacent to an ESA, water body or blue line stream, DPR Development shall consult PDS to determine if a PDP SWQMP is required. The PDP or Standard SWQMP plan form is developed during the project design and incorporated into the construction documents.

When DPR Development identifies that a project requires a PDP SWQMP, DPR contracts out and the consultant provides a plan that DPR reviews for MS4 compliance before implementation. If the plan requires technical expertise for review (i.e., hydromodification), DPR will request DPW WPP staff assistance in reviewing the plans. DPR Development will discuss any proposed permanent BMPs with DPR Operations to identify record keeping and JRMP Annual Reporting and maintenance obligations. Once DPR Operations concurs with the permanent BMPs, DPR Development will oversee the implementation and construction of the permanent BMPs per the major SWQMP. Once constructed, DPR Development will notify DPW WPP of the permanent BMP for the BMP inventory and identify that the construction is complete and DPR Operations is responsible for the ongoing maintenance and reporting, as identified in Section 5.0.

To ensure compliance with the 2013 MS4 Permit and WPO, and consistency with the other related County plans (General Plan, WQIPs, JRMP and BMP Design Manual), County staff routinely reviews project inventories, BMP requirements, and implementation strategies associated with the plans. The Watershed Protection Program may assist in coordinating meetings with other County staff in DPR to update and administrate these plans when necessary.

3.4.4.2 Staff Training

Designated County staff with implementation responsibilities must be trained in accordance with JRMP Section 10.2.

3.4.4.3 Outreach

As part of the facilitation process, education of stormwater management techniques and requirements are ongoing throughout the planning, development, and implementation process. Education targeted to the development and redevelopment community includes direct staff interaction with the public, the development and distribution of informational handouts, and targeted outreach events. In addition, the County continues to use the Project Clean Water website (www.projectcleanwater.org) as an informational resource for the public and permit applicants. Project Clean Water includes templates that can be used by engineers and contractors

Jurisdictional Runoff Management Program

to assist with completion of design packages that are compliant with provisions of the 2013 MS4 Permit related to new development and redevelopment.

Interaction with County Staff

Project applicants learn about water quality and stormwater management during initial interface with Zoning Counter staff upon inquiry of the project submittal package. Potential applicants are given a submittal package, which includes the SWQMP pre-intake checklist. Applicants can learn about County codes and ordinances when they attend a pre-application meeting to discuss their preliminary project. Water quality planning assistance typically includes identifying project locations in relation to hydrologic units and ESAs, explaining project requirements, and locating materials for SWQMP completion. Once the applicant has submitted the project package for discretionary review, County staff may meet with the applicant or may request more information regarding the stormwater management techniques for impact mitigation. The PDS Project Manager is available to answer project-related questions regarding water quality impacts.

County Websites

The County provides extensive website resources to assist applicants in complying with new development and redevelopment requirements. Links to stormwater information related to new development and redevelopment is located on both the PDS and DPW web sites. Links to grading plan guidelines, hydrology and water quality information are located on the PDS website at the following URL: <http://www.sandiegocounty.gov/content/sdc/pds/LandDevelopment.html>

The DPW's website is located at the following URL:
<http://www.sdcountry.ca.gov/dpw/watersheds.html>

The DPW website contains links to numerous resources, including Standard and PDP SWQMP Forms, Preliminary Hydrology/Drainage Study Guidelines, a BMP Design Manual Process Flow Chart, and an 85th Percentile Precipitation Map.

Downloadable documents are one example of the County's website resources. The WQIPs, WPO, Groundwater Ordinance, the BMP Design Manual, LID Handbook, and SWQMP formats are good examples of the downloadable documents.

Training and Outreach Events

The County provides and participates in outreach and education events for local industries and associations. Stormwater-related training seminars and workshops are commonly held throughout the permit cycle for the land development industry targeting planners, engineers, contractors, plan-checkers, and developers.

Jurisdictional Runoff Management Program

3.5 STRUCTURAL BMPS

3.5.1 Structural BMP Inventory

The structural BMP inventory will track all approved and verified structural BMPs on Priority Development Project sites from December 2002 to present. Structural BMPs will be added to the inventory as they are verified at the end of the construction phase as a condition prior to occupancy. The inventory will be watershed based and include the following minimum information:

- Priority Development Project location (address and hydrologic subarea);
- Descriptions of structural BMP type(s);
- Designation of priority;
- Date(s) of construction;
- Party responsible for structural BMP maintenance;
- Dates and findings of structural BMP maintenance verifications;
- Name of person performing inspection;
- If a Self-Verification Document (SVD) was used; and
- Corrective actions and/or resolutions, when applicable.

The inventory will be updated at least annually.

3.5.2 Structural BMP Prioritization

The prioritization of approved structural BMP projects is generally based on the type of structural BMP. Typically, a site that has a hydrodynamic separator or an extended detention basin is classified as a high inspection priority site. A site that has an infiltration trench, permeable pavement or drainage inserts is generally classified as medium, and a site that only has biofilters (swales, strips) would generally be a low inspection priority site. However, many other factors are taken into consideration when determining the priority, such as structural BMP size and number, recommended maintenance frequency, likelihood of operational and maintenance issues, location, receiving water quality, WQIP priorities, compliance record, and other pertinent issues to the site. Additionally, if the structural BMP is designed to directly drain to an Environmentally Sensitive Area or CWA 303(d) impaired waterbody (with or without a TMDL), the site may be re-prioritized upwards. Re-prioritization of any structural BMP may occur periodically upon assessment and determination that any of the factors used to select the initial priority has changed. For instance, if a site has poor compliance history, the site may be re-prioritized upwards.

Jurisdictional Runoff Management Program

3.5.3 Structural BMP Maintenance Verifications

3.5.3.1 Private Structural BMP (Low Priority)

For sites that are low priority, the Responsible Party (homeowner, developer, HOA, etc.) will be required to submit an SVD (Attachment 3.2) confirming that the low priority structural BMP has been maintained (inspected, cleaned, repaired, etc.) or submit to an inspection. The SVD must be submitted to the County DPW WPP for review and approval. This Low Priority SVD consists of a signed certification checklist verifying that the responsible party information is correct and that the maintenance has been performed.

Any complaints regarding low priority structural BMPs will also initiate an investigation and inspection.

3.5.3.2 Private Structural BMP (Medium Priority)

At a minimum, each private Responsible Party will be required to submit to the DPW WPP, an SVD confirming that the medium priority structural BMP has been maintained or submit to an inspection. The Medium Priority SVD (Attachment 3.2) consists of a signed form and supporting documentation such as copies of the service invoices and photographic documentation (before-and-after pictures). Maintenance logs will be kept onsite and made available for review by the County inspector. Moreover, any complaints regarding medium priority structural BMPs will also initiate an investigation and inspection.

3.5.3.3 Private Structural BMP (High Priority)

All sites with high priority structural BMPs will be inspected by County staff each year prior to October 1st.

3.5.3.4 County Special District Structural BMP Maintenance Verification (Category 3)

For private structural BMPs maintained by the County, the division responsible for maintaining the structural BMP maintains documentation that illustrates the approved structural BMP has routinely been inspected and maintained as necessary.

3.5.3.5 County Municipal Facilities Structural BMPs Category 4 (High, Medium, Low)

The County division responsible for maintaining structural BMPs maintains documentation indicating that the approved structural BMP has been inspected and maintained as necessary.

3.5.4 Structural BMP Inspection and Oversight

3.5.4.1 Compliance Inspections

As required by the 2013 MS4 Permit, the County inspects annually 100 percent of the structural BMPs designated as high priority. In addition, the County inspects a minimum of 20 percent of the total number of sites with approved structural BMPs.

Category 3 and 4 inspections must be conducted by County staff as part of the routine maintenance of the structural BMPs. Staff will follow standardized inspection procedures and complete appropriate documentation.

Jurisdictional Runoff Management Program

3.5.4.2 *Enforcement*

Please refer to the Enforcement Response Plan for details regarding enforcement of structural BMPs.

3.5.4.3 *Funding*

Proposed funding mechanisms for Category 3 and 4 maintenance activities are described in the BMP Design Manual.

IX. HYDROLOGY AND WATER QUALITY – Would the project:

a) Violate any water quality standards or waste discharge requirements?

- | | |
|---|---|
| <input type="checkbox"/> Potentially Significant Impact | <input type="checkbox"/> Less than Significant Impact |
| <input type="checkbox"/> Less than Significant with Mitigation Incorporated | <input type="checkbox"/> No Impact |

Discussion/Explanation:

b) Is the project tributary to an already impaired water body, as listed on the Clean Water Act Section 303(d) list? If so, could the project result in an increase in any pollutant for which the water body is already impaired?

- | | |
|---|---|
| <input type="checkbox"/> Potentially Significant Impact | <input type="checkbox"/> Less than Significant Impact |
| <input type="checkbox"/> Less than Significant with Mitigation Incorporated | <input type="checkbox"/> No Impact |

Discussion/Explanation:

c) Could the proposed project cause or contribute to an exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses?

- | | |
|---|---|
| <input type="checkbox"/> Potentially Significant Impact | <input type="checkbox"/> Less than Significant Impact |
| <input type="checkbox"/> Less than Significant with Mitigation Incorporated | <input type="checkbox"/> No Impact |

Discussion/Explanation:

d) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?

- | | |
|---|---|
| <input type="checkbox"/> Potentially Significant Impact | <input type="checkbox"/> Less than Significant Impact |
| <input type="checkbox"/> Less than Significant with Mitigation Incorporated | <input type="checkbox"/> No Impact |

Discussion/Explanation:

e) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?

- | | |
|---|---|
| <input type="checkbox"/> Potentially Significant Impact | <input type="checkbox"/> Less than Significant Impact |
| <input type="checkbox"/> Less than Significant with Mitigation Incorporated | <input type="checkbox"/> No Impact |

Discussion/Explanation:

Attachment 3.1

CEQA – Initial Study Environmental Checklist Form

f) Substantially alter the existing drainage pattern of the site or area, including through the alteration or the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

- | | |
|---|---|
| <input type="checkbox"/> Potentially Significant Impact | <input type="checkbox"/> Less than Significant Impact |
| <input type="checkbox"/> Less than Significant with Mitigation Incorporated | <input type="checkbox"/> No Impact |

Discussion/Explanation:

g) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems?

- | | |
|---|---|
| <input type="checkbox"/> Potentially Significant Impact | <input type="checkbox"/> Less than Significant Impact |
| <input type="checkbox"/> Less than Significant with Mitigation Incorporated | <input type="checkbox"/> No Impact |

Discussion/Explanation:

h) Provide substantial additional sources of polluted runoff?

- | | |
|---|---|
| <input type="checkbox"/> Potentially Significant Impact | <input type="checkbox"/> Less than Significant Impact |
| <input type="checkbox"/> Less than Significant with Mitigation Incorporated | <input type="checkbox"/> No Impact |

Discussion/Explanation:

i) Otherwise substantially degrade water quality?

- | | |
|---|---|
| <input type="checkbox"/> Potentially Significant Impact | <input type="checkbox"/> Less than Significant Impact |
| <input type="checkbox"/> Less than Significant with Mitigation Incorporated | <input type="checkbox"/> No Impact |

Discussion/Explanation:

j) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

- | | |
|---|---|
| <input type="checkbox"/> Potentially Significant Impact | <input type="checkbox"/> Less than Significant Impact |
| <input type="checkbox"/> Less than Significant with Mitigation Incorporated | <input type="checkbox"/> No Impact |

Discussion/Explanation:

k) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?

- | | |
|---|---|
| <input type="checkbox"/> Potentially Significant Impact | <input type="checkbox"/> Less than Significant Impact |
| <input type="checkbox"/> Less than Significant with Mitigation Incorporated | <input type="checkbox"/> No Impact |

Discussion/Explanation:

Attachment 3.1

CEQA – Initial Study Environmental Checklist Form

l) Expose people or structures to a significant risk of loss, injury or death involving flooding?

- | | |
|---|---|
| <input type="checkbox"/> Potentially Significant Impact | <input type="checkbox"/> Less than Significant Impact |
| <input type="checkbox"/> Less than Significant with Mitigation Incorporated | <input type="checkbox"/> No Impact |

Discussion/Explanation:

m) Expose people or structures to a significant risk of loss, injury or death involving flooding as a result of the failure of a levee or dam?

- | | |
|---|---|
| <input type="checkbox"/> Potentially Significant Impact | <input type="checkbox"/> Less than Significant Impact |
| <input type="checkbox"/> Less than Significant with Mitigation Incorporated | <input type="checkbox"/> No Impact |

Discussion/Explanation:

n) Inundation by seiche, tsunami, or mudflow?

- | | |
|---|---|
| <input type="checkbox"/> Potentially Significant Impact | <input type="checkbox"/> Less than Significant Impact |
| <input type="checkbox"/> Less than Significant with Mitigation Incorporated | <input type="checkbox"/> No Impact |

Discussion/Explanation:

The following list of typical maintenance indicators and maintenance activities for biofilters is provided for your reference.

Biofilter BMPs Inspection and Maintenance Checklist	
Typical Maintenance Indicators	Typical Maintenance Actions
Accumulation of sediment, litter, or debris	Remove and properly dispose of accumulated materials, without damage to the vegetation.
Poor vegetation establishment	Re-seed, re-establish vegetation.
Overgrown vegetation	Mow or trim as appropriate, but not less than the design height of the vegetation (typically 4-6 inches for grass).
Erosion due to concentrated irrigation flow	Repair/re-seed eroded areas and adjust the irrigation system.
Erosion due to concentrated stormwater runoff flow	Repair/re-seed eroded areas and make appropriate corrective measures such as adding erosion control blankets, adding stone at flow entry points, or re-grading where necessary.
Standing water (BMP not draining)	Make appropriate corrective measures such as adjusting irrigation system, removing obstructions of debris or invasive vegetation, clearing underdrains (where applicable), or repairing/replacing compacted soils.
Obstructed inlet or outlet structure	Clear obstructions.
Damage to structural components such as weirs, inlet, or outlet structures	Repair or replace as applicable.

OPERATION AND MAINTENANCE VERIFICATION FORM
INFILTRATION – SIDE 2**

The following list of typical maintenance indicators and maintenance activities for infiltration BMPs is provided for your reference. There are many types of infiltration BMPs including basins that store storm water runoff in above-ground ponding areas until it infiltrates into the surrounding soils, and gravel-filled trenches or wells that store storm water runoff in the gravel reservoir until it infiltrates into the surrounding soils. This BMP category also includes permeable paving areas that store storm water runoff in a gravel reservoir under the permeable paving surface.

Infiltration BMPs Inspection and Maintenance Checklist	
Typical Maintenance Indicators	Typical Maintenance Actions
Accumulation of sediment, litter, or debris in infiltration basin, pre-treatment device, or on surface of porous pavement, as applicable	Remove and properly dispose of accumulated materials.
Standing water in infiltration basin	Remove and replace clogged surface soils.
Standing water in infiltration trench, dry well, or subsurface reservoir bed	Flush fine sediment from gravel storage area.
Standing water in permeable paving area	Flush fine sediment from paving and subsurface gravel.
Damage to permeable paving surface resulting in reduced storm water intake capacity	Repair or replace damaged surface as appropriate.

When inspection or maintenance indicates sediment is accumulating in an infiltration BMP, the watershed draining to the infiltration BMP should be examined to determine the source of the sediment, and corrective measures should be made as applicable to minimize the sediment supply.

HYDRODYNAMIC SEPARATORS – SIDE 2**

The following list of typical maintenance indicators and maintenance activities for hydrodynamic separators is provided for your reference.

Hydrodynamic Separator BMPs Inspection and Maintenance Checklist	
Typical Maintenance Indicators	Typical Maintenance Actions
Accumulation of sediment, litter, or debris	Remove and properly dispose of accumulated materials.
Accumulation of floating oil and grease	Remove and properly dispose of oil and grease.
Spent or clogged sorbent material or media pack	Remove and properly dispose of sorbent material or media pack, and replace with fresh material. These materials/media are potentially hazardous and must be handled by a properly trained contractor.
Damage to components of the hydrodynamic separator	Repair or replace as applicable.

Maintenance of hydrodynamic separators involves handling of potentially hazardous material (oil and/or oil sorbent material), which requires special disposal. Additionally, maintenance may involve entry into the hydrodynamic separator underground. Therefore the maintenance operator must be trained in handling and disposal of hazardous waste, and must also be certified for confined space entry if the maintenance will require entry into the hydrodynamic separator. Therefore it is recommended that private BMP owners obtain a maintenance contract with a qualified contractor to provide inspection and maintenance. There are several storm drain cleaning service providers who are able to inspect and/or maintain hydrodynamic separators. Contact the manufacturer of the hydrodynamic separator to find qualified service providers.

Attachment 4.1: Construction Site BMPs for Typical Construction Activities

Jurisdictional Runoff Management Program

4.0 CONSTRUCTION COMPONENT

4.1 INTRODUCTION

The County of San Diego (County) has initiated a construction conditioning process to prevent discharges of pollutants and non-stormwater discharges from construction sites. Construction activities, such as mass grading, clearing, and grubbing, remove the vegetation and disrupt the soil surfaces. This disruption leaves the soil susceptible to erosion from rainfall, wind, or excessive or improper water use. Grading and clearing activities cause rain to run off a project site at higher velocities than a site with natural vegetation. This excess sediment is considered a pollutant because it is detrimental to aquatic life as it interferes with photosynthesis, respiration, growth and reproduction. The construction conditioning process requires that any person submitting a grading permit application must document that appropriate construction Best Management Practices (BMPs) will be used to prevent stormwater pollution from their project site. Depending upon the size of the proposed project, either of the following two documents must be submitted with the initial grading permit application: 1) Notice of Intent (NOI) for the California General Permit for Construction Activities (CGP) with erosion and sediment control plan; or 2) a Stormwater Quality Management Plan (SWQMP). The following sections provide a description of the County's processes for preventing construction associated discharges from entering into surface waters. In addition to the processes identified in this section, the watershed-based Water Quality Improvement Plans (WQIPs) may also include content to be considered in modifying or updating requirements or approaches for construction-related discharge within applicable Watershed Management Areas.

4.2 SITE INVENTORY

The County maintains multiple databases of construction sites within each department. When these inventories are combined, they represent all private and public construction projects that allow ground disturbance or soil-disturbing activities that can potentially generate pollutants in stormwater runoff. The following departments inventory construction projects:

- Planning & Development Services (PDS)-Building Division
- Department of Public Works (DPW)-Private Development Construction Inspection (PDCI)
- DPW-Capital Improvement Program (CIP)
- Department of Parks and Recreation (DPR)-CIP
- Department of General Services (DGS)-CIP

The inventories are watershed based and contain the following minimum information:

- The name, address, phone number and email for the owner and person performing the work;
- Basic site information including address, hydrologic subarea, Waste Discharge Identification (WDID) number (if applicable), size of the site, and approximate area of disturbance;
- Whether or not the site is considered a high Threat to Water Quality;
- Project start and completion dates;
- Required inspection frequency;

Jurisdictional Runoff Management Program

- Date the County accepted the plan describing the pollution control strategies
 - Private projects - Standard SWQMP or Priority Development Project (PDP) SWQMP, along with an erosion control plan
 - CIP projects – Stormwater Pollution Prevention Plan (SWPPP) or Water Pollution Control Plan (WPCP)
- Whether or not there are ongoing enforcement actions administered to the site

4.2.1 Private Development Projects and Capital Improvement Program Projects

Private construction inventories are maintained and managed in the Accela Automation™ management software system. CIP project inventories are maintained and managed in different departmental databases.

The inventory lists for private development projects and CIP projects include:

- Project name;
- Relevant contact information for each site;
- Basic site information including location (address and hydrologic subarea), WDID number (if applicable), size of the site, and approximate area of disturbance;
- Whether or not the site is considered a high Threat to Water Quality;
- Priority rating for each project;
- Project start and completion dates;
- The required inspection frequency;
- The date the County accepted the Pollution Control Plan, Construction BMP Plan, and/or Erosion and Sediment Control Plan; and
- Whether or not there are ongoing enforcement actions administered to the site.

It is important to note that site inventories are dynamic as projects are constantly opening and closing.

4.2.2 Exempt Projects

All project proponents are responsible for preventing construction-related materials, wastes, spills, or residues from entering stormwater conveyance systems.

However, the following project types are exempt from construction stormwater BMP implementation and documentation requirements if the project involves minimal or no soil disturbance, and is associated with:

- Interior remodeling;
- Mechanical permit work;
- Electrical permit work;

Jurisdictional Runoff Management Program

- Plumbing permit work;
- Tenant improvements;
- Sea cargo containers;
- Changes of use within an existing building;
- Temporary mobile home and trailer permits;
- Minor permits accessory to an existing building where monitoring of stormwater management will occur in conjunction with scheduled building inspections, including additions of 500 square feet or less, sheds, swimming pools, patio covers, decks, carports, retaining walls, signs, and solar photovoltaic; and
- Emergency construction activities required for immediate protection of public health and safety.

4.2.3 Inventory Updates

In accordance with the 2013 MS4 Permit Provision E.4.(b), all private construction project inventories must be updated at least quarterly. Private project databases are updated continuously as new permits are issued. Permits are assigned priorities and watershed designations at the time of issuance. These are entered into an Accela Automation™ database management software system, effectively adding each project to the stormwater inventory for its respective department.

CIP construction inventories are maintained and managed in databases within their respective departments. They are updated on a quarterly basis. At the time of project entry into the inventory, a site priority is assigned and a watershed designation is determined using the County's on-line GIS tool that is cross-referenced to the Accela Automation™ database management software system with parcel information.

4.2.4 Threat to Water Quality Prioritization

In order to prioritize construction site inspections, all sites that represent a high Threat to Water Quality (TTWQ) must be identified. A high TTWQ designation is determined based on the discretion of the County after consideration of a number of factors. These factors are:

- Sites located within a hydrologic subarea where sediment is known or suspected to contribute to the highest priority water quality conditions identified in the Water Quality Improvement Plan (WQIP). Mission Bay Watershed Management Area (WMA) and Tijuana River WMA are both currently considered to have hydrologic subareas in which sediment is among the highest priority pollutants;
- Sites located within the same hydrologic subarea and tributary to a waterbody segment listed as impaired for sediment on the Clean Water Act (CWA) section 303(d) list;

Jurisdictional Runoff Management Program

- Sites located within, or located within 200 feet or less of, or discharging directly to a receiving water within an environmentally sensitive area (ESA);
- Sites determined by the County of San Diego or Regional Water Quality Control Board (Regional Board) as a high TTWQ; and
- Any other factor, site characteristic, or aspect of the project scope pertinent to evaluating the project’s sediment discharge risk or receiving water risk. These factors would typically include the project disturbance area, topography, soil characteristics, and seasonal rain potential (i.e., wet season, dry season), among others.

Table 4.1- Definitions of Prioritization Criteria

A project is:	If it meets these criteria:
Tributary to a sediment impaired CWA 303(d) Waterbody	The project is located within a watershed listed as 303(d) impaired for sediment <ul style="list-style-type: none"> ▪ Carlsbad Watershed, sub-basin 904.21; or ▪ Carlsbad Watershed, sub-basin 904.61; or ▪ Penasquitos Watershed, sub-basin 906.10; or ▪ Tijuana Watershed, sub-basin 911.11; or ▪ Other updated Watershed(s) on the EPA CWA 303(d) list. http://www.swrcb.ca.gov/sandiego/water_issues/programs/303d_list/index.shtml
In, or adjacent to, an Environmentally Sensitive Area (ESA)	The project is located within 200 feet of lands or receiving waters designated as any of the following: <ul style="list-style-type: none"> ▪ RARE beneficial use; or ▪ Areas of Significant Biological Significance (ASBS); or ▪ Multiple Species Conservation Program (MSCP) preserve elements
In a WQIP sediment is the Highest Priority Water Quality Condition(s)	The project is located within a hydrologic subarea where sediment is known or suspected to contribute to the Highest Priority Water Quality Condition(s) in the WQIP.

4.3 ORDINANCE UPDATES

4.3.1 Watershed Protection Ordinance

The *Watershed Protection, Stormwater Management and Discharge Control Ordinance* (commonly referred to as the Watershed Protection Ordinance (WPO)) was initially adopted on February 1, 2002 as Ordinance Number 9426 and amended on March 12, 2008, to reflect the requirements of the 2007 MS4 Permit. The WPO was amended on June 12, 2015 to reflect the new requirements of the 2013 MS4 Permit. The following are the major changes made in the 2015 amendment related to construction activities:

- Updated the list of construction BMPs that must be implemented on all construction sites.
- Refined the definition of pollutant control strategies to be implemented at construction sites consistent with the 2013 MS4 Permit.

Jurisdictional Runoff Management Program

4.3.2 Grading Ordinance

The *San Diego County Grading, Clearing and Watercourses Ordinance* (commonly referred to as the Grading Ordinance) was adopted on May 9, 2003 as Ordinance Number 9547. The Grading Ordinance requires the implementation of temporary and/or permanent erosion controls for both minor and major grading activities.

The County amended the Grading Ordinance on March 12, 2008, to reflect changes to the requirements specified in Section D.2.c.(1)(a)vi of the 2007 MS4 Permit. Section 87.414 of the Regulatory Code was amended to define what an “active disturbed soil area” is and prescribe the maximum area that can be active at one time.

Disturbed soil areas are considered “active” whenever soil disturbing activities have occurred, continue to occur, or will occur during the ensuing 14 days. Non-active areas must be protected within 14 days of the cessation of soil disturbing activities or prior to the onset of precipitation (50 percent chance of ½ inch or more of rain), whichever occurs first.

The active disturbed soil area of the project site may not be more than 50 acres for an individual grading permit or a combination of grading permits under the Tentative or Final Map. The County may approve, on a case-by-case basis, expansions of the active disturbed soil area limit. Soil stabilization and sediment control materials shall be maintained onsite sufficient (125 percent of those required) to protect the disturbed soil area.

4.4 BEST MANAGEMENT PRACTICE REQUIREMENTS

All construction sites determined to be a land disturbance activity, as defined in the WPO, are required to meet General BMP Requirements (see Attachment 2.2, Section 67.806) and the Additional BMP Requirements for Construction Projects (Section 67.809).

BMP requirements are applicable to both private and CIP construction projects. Specific BMPs are determined on a case-by-case basis considering applicable BMP performance standards, site constraints and characteristics, and stormwater control needs. Attachment 4.1 provides a matrix of the construction site BMPs that are accepted by the County for use during construction activities. These practices are consistent with the BMPs and control practices required under the CGP. Detailed descriptions and guidance regarding implementation of these BMPs are provided in the latest editions of the Caltrans Stormwater Quality Practice Guidelines, Construction Site BMPs Manual, and the California Stormwater Quality Association (CASQA) Construction Handbook. If particular BMPs are infeasible at any specific site, the County will implement, or require the implementation of, other equivalent BMPs. The County will also implement or require any additional site-specific BMPs as necessary to comply with the 2013 MS4 Permit, including BMPs which are more stringent than those required under the CGP.

Jurisdictional Runoff Management Program

4.4.1 Updated BMP Requirements

Section 67.806 (Attachment 2.2) of the WPO includes the list of general BMP requirements applicable to all dischargers. Section 67.809 (Attachment 2.2) of the WPO includes the list of additional BMPs to be implemented and maintained for construction projects.

4.4.1.1 *Minimum BMP Requirements*

Because of the ever-present threat of sediment discharge on active construction sites, certain pollution control practices must be implemented year-round. At a minimum, the County has determined the following pollution control practices be adequately implemented and maintained year-round on all non-exempt projects:

- Project Planning;
- Good Site Management “Housekeeping,” including waste management;
- Non-stormwater Management;
- Erosion Control;
- Sediment Control;
- Run-on and Run-off Control;
- Active/Passive Sediment Treatment Systems, where applicable; and
- Any other construction BMPs suggested by the applicable WQIP and deemed to be effective at controlling erosion and sedimentation.

Disturbed soil areas shall be considered active whenever the soil disturbing activities have occurred, continue to occur, or will occur during the ensuing 14 days. Non-active areas shall be protected within 14 days of cessation of soil disturbing activities or prior to the onset of precipitation, whichever occurs first.

4.4.1.2 *Dry Season BMP Implementation Option*

During the non-rainy season from May 1 through September 30, the developer may opt to employ “weather triggered” action plans (a.k.a. Rain Event Action Plan or REAP) in lieu of fully deployed BMPs, although this does not relieve the Developer from this obligation to provide some year-round measures as required by the CGP. When the Developer opts to employ a “weather triggered” action plan, it must be approved by the inspector and have the ability to deploy standby BMPs as needed to completely protect the exposed portion of the project site within 48 hours of a predicted storm event. As required by the CGP, slope stabilization is required on all active slopes during rain events regardless of season. Grading must correlate to the dry weather season to the extent feasible. At a minimum, the “weather triggered” action plan must include water pollution control drawings (WPCDs) that illustrate the locations, applications, inspection frequency, staff availability, and deployment of the BMPs proposed.

If a “weather triggered” action plan is used, the developer is required to monitor the weather on a daily basis using the National Weather Service weather forecast. If precipitation is predicted (50 percent chance of ½ inch or more of rain), the necessary water pollution control practices must be deployed

Jurisdictional Runoff Management Program

within 48 hours and prior to the onset of the precipitation. A minimum of 125 percent of the material needed to install weather-triggered BMPs necessary to completely protect the exposed portions of the site from erosion, and to prevent sediment discharges, must be stored onsite. Areas that have already been protected from erosion using physical stabilization or established vegetation stabilization BMPs as determined by the County are not considered to be “exposed” for purposes of this requirement. Developers must ensure physical stabilization erosion control is implemented for all unplanted finished slopes.

4.4.1.3 *Wet Season BMP Implementation Requirements*

Implementation of required soil stabilization and sediment control practices for non-active disturbed soil areas must be fully deployed prior to the beginning of each rainy season. All exposed disturbed areas including all flat areas and slopes must have soil stabilization and sediment control practices properly installed during rain events regardless of the season. Construction activities beginning during the rainy season must implement applicable soil stabilization and sediment control practices.

As new technologies evolve, the County will consider the adoption of BMPs that are used by Caltrans or other agencies and those that have been proven to meet industry standards. Project and site conditions may allow implementation of enhanced temporary construction pollution management practices that go beyond those set forth in Attachment 4.2. The County will accept the temporary use of these BMPs as long as it is approved by the DPW Watershed Protection Program. The County expects that the temporary construction management practices identified herein will continue to evolve and improve in their effectiveness in managing the quality of stormwater discharges.

4.4.2 *Maximum Disturbed Area for Erosion Controls*

The County has defined in Section 87.414 of the Grading Ordinance that the active disturbed soil area of a project site shall be no more than 50 acres for individual grading permits, improvement plans, or combinations of grading permits under associated Tentative or Final Maps, unless otherwise approved by the County. A minimum of 125 percent of the required stormwater BMP materials shall be maintained onsite to protect the disturbed soil area.

4.5 PROGRAM IMPLEMENTATION

4.5.1 *Private Development*

WPO and 2013 MS4 Permit compliance for private construction are accomplished through a series of review processes throughout the County’s Land Use Environmental Group (LUEG) Departments and Divisions. The following section provides a description of County staff and their associated responsibility for ensuring implementation of a successful stormwater program.

4.5.1.1 *Program Planning and Administration*

To ensure compliance with the 2013 MS4 Permit, WPO, and implementation plans, County staff routinely reviews project inventories, BMP requirements, and implementation strategies associated with

Jurisdictional Runoff Management Program

the plan. The Watershed Protection Program may assist in coordinating meetings with other County staff in PDS and DPW to update and administrate these plans when necessary.

4.5.1.1.1 Staff training

Designated County staff with implementation responsibilities must be trained in accordance with JRMP Section 7.2.

4.5.1.2 Facilitation Activities

The following sections describe the different activities associated with the facilitation of the project review process, education of stormwater requirements, and BMP implementation.

4.5.1.2.1 Private Construction and Grading Permit Approval Process

PDS Building Division

The PDS Building Division is responsible for the issuance of permits for structural construction and minor grading permits with earthwork of less than 2,500 cubic yards and meeting other criteria specified in the Grading Ordinance. For all projects, applicants are required to submit a SWQMP. Permits for track housing and commercial developments are all subject to the BMP Design Manual process described in the Land Use Planning Component. Construction BMPs for these permit types are discretionary. All other permit types are ministerial and thus the project must comply with the Standard SWQMP. The construction BMPs are selected as part of the Standard SWQMP. A permit is not approved without an approved Standard SWQMP.

PDS Land Development Division

The PDS Land Development Division is responsible for issuance of major and minor grading permits not meeting the criteria for issuance by the PDS Building Division. These grading permits must comply with the BMP Design Manual and WPO requirements. The grading plan usually shows all construction BMPs.

All Grading Permit applications require a SWQMP. Plan check staff review the construction BMPs using all applicable guidance documents. When applicable, staff requires proof of an NOI to comply with the CGP.

Grading Permits are issued once the plans and/or conditions are satisfied. Permits are usually processed by the PDS Customer Service Counter and approved by the PDS Project Manager.

Statewide Construction General Permit (CGP)

Construction activities which disturb one or more acres of soil or projects that disturb less than 1 acre but are part of a larger common plan of development that in total disturbs one or more acres, are required to obtain coverage under the CGP. The CGP requires the development and implementation of a SWPPP. The SWPPP should contain a site map(s) which shows the construction site perimeter, existing and proposed buildings, lots, roadways, stormwater collection and discharge points, general topography both before and after construction, and drainage patterns across the project. The SWPPP must list the BMPs the discharger will use to protect stormwater runoff and the placement of those BMPs. Additionally, the SWPPP must contain a visual monitoring program; a chemical monitoring program for "non-visible" pollutants to be implemented if there is a failure of BMPs; and a sediment monitoring plan if the site

Jurisdictional Runoff Management Program

discharges directly to a waterbody listed on the 303(d) list for sediment. The SWPPP must include documentation of training for field implementation personnel, sampling protocol (if applicable), and Rain Event Action Plans (REAPs) (if applicable).

The County's operational processes are intended to generally relate to the CGP in 2 ways:

1. For DPW Projects – achieve compliance for applicable projects through submittal of project registration documents, creation and implementation of a project SWPPP, and through implementation of construction site monitoring.
2. For private projects – screen projects through the plan-check and inspection processes to identify projects potentially subject to CGP requirements, and confirm, when applicable, that CGP coverage has been obtained.

4.5.1.2.2 Inspection of Construction Sites - Overview

The County inspection program for private development sites reviews projects for compliance with applicable ordinances, permits (building, grading, stormwater, etc.) and the 2013 MS4 Permit by assuring that all conditions related to grading, erosion control, stormwater BMPs, and discharges from the site are met. Inspections are conducted to ensure that property owners and developers implement an effective combination of BMPs to meet minimum requirements based upon the site's TTWQ prioritization.

Stormwater management and inspection requirements specific to developer and single-family grading permits and other construction activities under the oversight of the DPW are detailed in a Director's Letter of Instruction: Stormwater Management and Requirements on Developer and Single Family Grading Permits – Construction Best Management Practices (DLI-LD-I).

In general, private construction projects are regularly inspected by the Supervising Engineer, County inspectors, or other County contract staff with enforcement authority to verify that the construction activities are being performed in accordance with the project plans, building and grading permits, and applicable codes, special provisions, regulations, and ordinances. If the inspected site does not meet minimum requirements or there is a discharge related to construction activities, County inspectors will require compliance and conduct follow-up inspections as necessary to confirm that compliance is attained. Additional inspections will be conducted as project scope dictates the need for modified or additional BMPs. For each inspection, the inspector utilizes the following framework when conducting an inspection:

- a. Review the applicable BMP plan (either a SWPPP, Standard SWQMP, or PDP SWQMP);
- b. Determine if BMPs are being deployed in accordance with manufacturers' recommendations, industry recommended standards, and approved plans;
- c. Determine whether BMPs are being effectively implemented and properly maintained;
- d. Document any non-stormwater discharges or potential illicit connections;
- e. Document any discharge of sediment or construction-related materials from the site;

Jurisdictional Runoff Management Program

- f. Determine whether the responsible party is making appropriate adjustments when ineffective BMPs are found; and
- g. If BMPs are either lacking or being implemented improperly, require remediation within a reasonable time frame and implementation of corrective actions if necessary in accordance with the Enforcement Response Plan (ERP).

For projects subject to the CGP, the Regional Board is responsible for verifying and enforcing requirements of the CGP. When County inspections are conducted at sites covered by the CGP, the inspector will document the presence of a SWPPP, review required documentation, note any observations of potential violations, and require appropriate remedial actions as necessary to ensure compliance with the 2013 MS4 Permit. The County will notify the Regional Board of the noncompliance in accordance with the 2013 MS4 Permit Provision E.6.d. and Attachment B if the noncompliance poses a significant threat to water quality or may endanger health or the environment. Procedures for escalated enforcement of construction site discharge standards found within the County's ERP provide examples of non-compliant conditions that constitute such a threat.

PDCI Inspection Process

The inspection process is broken into three distinct phases of BMP verification and implementation:

1. Initial inspection prior to grading;
2. Inspections during ongoing and rough grading; and
3. Inspection at the completion of grading activity.

Each of these phases ensures that proper BMPs are implemented on the project site prior to allowing the construction activity to proceed or to verify completion.

The initial stormwater BMP inspection occurs after the area to be graded is brushed or cleared, but prior to the start of grading operations. During this inspection, each inspector verifies that the BMPs previously designated during the design phase are being implemented appropriately. At a minimum, each site must have perimeter sediment controls and offsite/onsite sediment controls, all needed BMP materials onsite if utilizing a weather-triggered action plan, and fencing installed along or around any environmentally sensitive areas, if required.

During the ongoing and rough grading inspections, inspectors review and verify that all items from the initial BMP inspection are still in place, that erosion control BMPs are installed as soon as the finished slopes and flat areas are complete, that all deployed BMPs are maintained in proper working condition, and no construction runoff other than stormwater will discharge into a stormwater conveyance or receiving waterbody. Below is a description of the required inspection steps.

- a. Determine if BMPs are being deployed in accordance with manufacturers' recommendations, industry recommended standards, and approved plans;
- b. Visually determine whether BMPs are being effectively implemented and properly maintained;
- c. Document any non-stormwater discharges or potential illicit connections;

Jurisdictional Runoff Management Program

- d. Document any discharge for sediment or construction-related materials from the site;
- e. Determine whether the responsible party is making appropriate adjustments when ineffective BMPs are found; and
- f. If BMPs are either lacking or being implemented improperly, require remediation within a reasonable time frame and implementation of corrective actions if necessary in accordance with the ERP.

The final stormwater inspection for grading or building activities verifies that all permanent BMPs specified in the applicable construction BMP Plan (Standard SWQMP, PDP SWQMP, or SWPPP) are in place and in proper working condition. For grading activities, inspectors verify that the site matches the approved grading plan, there are no rills or gullies larger than 3 inches wide or deep, that all manufactured slopes or flat areas are protected through either vegetation or other approved BMP unless site discharges through a properly designed desiltation basin(s), and that there is no construction runoff that will discharge into a stormwater conveyance or receiving waterbody. For some PDPs, appropriate steps must be taken to transfer permanent maintenance of structural BMPs from the developer to either the San Diego County Flood Control District or the Watershed Protection Program. Applicability and detailed guidance for both scenarios can be found in the Director's Letter of Instruction (DLI) LD-S and LD-W.

Inspection Frequencies

PDCI Inspection Frequency

Because of the dynamic nature of construction activities, the County evaluates each site inspection frequency on a regular basis, particularly when grading activities are being conducted during the State's official wet (rainy) season (October 1 through April 30). The need for additional inspections may vary depending upon several factors including:

- Active construction activity;
- Site conditions;
- Previous violations;
- History of contractor's performance;
- Weather patterns; and
- Priority of construction site.

Requirements for inspection frequency are intended to be "site-based," as opposed to "permit-based," to avoid needless duplication of effort among County staff. During phase(s) of the project in which there is no potential for stormwater, non-stormwater, or sediment discharge from the development area, the County may choose to reduce or completely suspend site inspections.

If the project grading permit has been issued but grading activities have not yet begun or active grading is completed and project is waiting for the final inspection to close the grading permit ("As-Built" inspection), then the project will be inspected at a minimum of twice during the wet season.

Jurisdictional Runoff Management Program

Disturbed soil areas will be considered active whenever the soil disturbing activities have occurred, continue to occur, or will occur during the ensuing 14 days. Non-active areas must be protected within 14 days of cessation of soil disturbing activities or prior to the onset of precipitation, whichever occurs first.

Table 4.2 - Department of Public Works, PDCI Inspection Frequencies

Project Priority	Minimum Inspection Frequency	Inspection Prioritization Criteria
Low	Twice during wet season	<ul style="list-style-type: none"> ▪ Inactive Grading Permits ▪ The project disturbed area boundary is less than one acre.
Medium	Monthly	<ul style="list-style-type: none"> ▪ The project disturbed area boundary is (1) greater than or equal to 50 acres, <u>but</u> (2) wet season grading will <u>not</u> occur; or ▪ Project disturbed area boundary is (1) greater than or equal to one acre, <u>but is not</u> (2) a high TTWQ as defined by Table 4.1.
High	Bi-Weekly	<ul style="list-style-type: none"> ▪ The project disturbed area boundary is (1) greater than or equal to 50 acres, <u>and</u> (2) wet season grading will occur; or ▪ The project disturbed area boundary is (1) greater than or equal to one acre, <u>and</u> (2) is a high TTWQ as defined by Table 4.1.

PDS Building Inspection Frequency

Projects with building permits are prioritized based on TTWQ as defined by Section 4.2.4 and Table 4.1, size of the project disturbed area boundary, requirement for PDS Minor Grading permit, and track model and production unit construction. Table 4.3 summarizes the minimum regular inspection frequencies for private construction. Additional inspections will be conducted as necessary to confirm that the site reduces the discharge of pollutants to the MEP and effectively prohibits non-stormwater discharges. In some instances, a private construction site may hold several open permits (i.e., a grading permit and a building permit). Requirements for inspection frequency are intended to be “site-based,” as opposed to “permit-based,” to avoid needless duplication of effort among County staff. During phase(s) of the project in which there is no potential for stormwater, non-stormwater, or sediment discharge from the development area, the County may choose to reduce or completely suspend site inspections.

Table 4.3 - PDS Building Inspection Frequencies

Project Priority	Minimum Inspection Frequency	Inspection Prioritization Criteria
Low	Twice during wet season	<ul style="list-style-type: none"> ▪ The project disturbed area boundary is less than one acre, the project is not exempt per section 4.2.2, and the project does not meet the criteria for a high- or medium-priority project as specified below.
Medium	Monthly during wet season	<ul style="list-style-type: none"> ▪ The project requires a PDS Minor Grading permit as specified in the County of San Diego Grading Ordinance; or ▪ The project disturbed area boundary is (1) greater than or equal to one acre, <u>but is not</u> (2) a high TTWQ as defined by Table 4.1.
High	Every two weeks during wet season	<ul style="list-style-type: none"> ▪ The project is a single-family dwelling constructed under a PDS residential model or production phase building permit; or ▪ The project disturbed area boundary is (1) greater than or equal to one acre, <u>and</u> (2) is a high TTWQ as defined by Table 4.1.

Jurisdictional Runoff Management Program

4.5.2 Capital Improvement Program (CIP)

WPO and 2013 MS4 Permit compliance for CIP projects are accomplished through three main County departments: the Department of General Services (DGS), Department of Public Works (DPW), and the Department of Parks and Recreation (DPR). Requirements for CIP maintenance projects are included in the Municipal section of the Existing Development Component.

In DPW CIP, MS4 and CGP program implementation roles and responsibilities are primarily spelled out in DLI ES-N. Implementation of 2013 MS4 Permit and CGP requirements begins in the early phases of project development and continues throughout the life of the project. The roles and responsibilities are identified in an implementation matrix attached to DLI ES-N. DPW staff involved with development and construction administration of DPW CIP projects are responsible for compliance with the various permit requirements and must attend stormwater training classes provided by DPW. Additionally, DPW staff responsible for implementation of the CGP requirements must become a Qualified SWPPP Developer (QSD) and/or Qualified SWPPP Practitioner (QSP). All DPW CIP projects fill out a Standard or Priority Development Project SWQMP, with larger projects requiring preparation of hydrology/drainage studies.

4.5.2.1 Program Planning and Administration

To ensure compliance with the 2013 MS4 Permit, WPO, and implementation plans, County staff routinely reviews project inventories, BMP requirements, and implementation strategies. The DPW Watershed Protection Program may assist in coordinating meetings with other County staff in PDS and DPW to update and administrate these implementation plans (including the JRMP) when necessary.

4.5.2.1.1 Staff training

Designated County staff with implementation responsibilities must be trained in accordance with JRMP Section 7.2.

The following sections describe the different activities associated with the facilitation of the project review process, education on stormwater requirements, and BMP implementation.

4.5.2.1.2 Construction Planning Process and Contract Specifications

Department of Public Works CIP

The Engineering Services Division is responsible for the implementation of policies, procedures, and activities for CIP projects. This includes ensuring compliance with all applicable elements of the 2013 MS4 Permit. The CIP process consists of three distinct implementation phases:

1. Project planning and design;
2. Contract development and contractor selection; and
3. Contract management of the construction project.

DPW CIP Project Planning and Design

Project planning is initiated for projects that are part of a five-year plan or that are identified as necessary to protect public health and safety. Engineering Services Project Managers develop the project plan and

Jurisdictional Runoff Management Program

design and evaluate it against the BMP Design Manual criteria and the WPO as detailed in the Land Use Planning Component (Section 3). A scope of work is then completed to include the required post-construction BMPs. After this, a conceptual Water Pollution Control Plan (WPCP) is created by a CIP Design Unit to provide initial construction BMP guidance for inclusion in the necessary contract scope of work. The contractor develops the SWPPP or WPCP depending on the area of soil disturbance.

DPW CIP Contract Development and Contractor Selection

Project contract documents are developed by design engineers using established standard plans and specifications. Within each contract document, special provisions and conditions are defined for the project. Water Pollution Control Specifications and Erosion Control Specifications are developed to augment specifications in the Caltrans Standards. Once the contract document is completed, a notice to invite bids for the contract is sent to prospective contractors and posted on County websites. The bid proposals are reviewed and the contract is awarded to the lowest responsible bidder. Pre-Advertise and Pre-Award checklists are available and should be completed as part of the contract development and contractor selection process.

DPW CIP Contract Management and Inspection of Construction Projects

Contract administration and monitoring is conducted by Construction Engineering staff (Resident Engineers). The Resident Engineer makes decisions regarding the acceptability of material furnished and work performed and exercises contractual authority to direct the contractor. The Resident Engineer may impose sanctions if the contractor fails to take appropriate actions specified in the contract to correct deficiencies.

Construction BMPs and self-monitoring are part of every contract requirement. The contractor must develop a WPCP for projects that are less than one acre or a SWPPP for projects greater than one acre. The Resident Engineer reviews and accepts the WPCP or SWPPP prior to the commencement of construction activities. If amendments are needed, the Resident Engineer will review and accept them. The SWPPP and amendments are submitted into the State Water Resource Control Board's Stormwater Multiple Application and Report Tracking System (SMARTS) Database after acceptance. Roles and responsibilities for implementation of CGP and construction-related MS4 permit requirements to CIP projects are described further within DLI-ES-N, *Implementation of Stormwater Construction Permit and Municipal Separate Storm Sewer Permit Requirements on Capital Improvement Program Projects*. DLI-ES-N addresses various implementation tasks before and after the Notice to Proceed through the end of construction, acceptance of the Notice of Termination, post-project bioassessment monitoring, and final project acceptance. DLI-ES-N also addresses roles and responsibilities associated with reporting NPDES violations associated with CIP projects.

Department of Parks and Recreation CIP

Project Managers develop the project scope of work based on needs identified as part of the five-year plan. Depending on the scope of work and the project needs, construction project management may occur directly in the DPR, or by DGS or DPW. Project contract documents are prepared to include Stormwater Specifications to ensure that project implementation includes the necessary construction BMPs and is

Jurisdictional Runoff Management Program

compliant with the CGP, if applicable. Once the plans, specifications, and contract documents are completed, a notice to invite bids or proposals for the project is sent to prospective contractors, trade newspapers, and newspapers for general circulation and is posted on the County website. Project contractors are selected according to purchasing and contracting procedures.

Contract administration and monitoring is conducted by the staff of the implementing department. For projects managed by DGS or DPW, the DPR Project Manager provides additional project oversight, inspects the project, and makes decisions regarding the acceptability of material furnished and work performed. The Construction Project Manager administering the contract may impose sanctions if the contractor fails to take appropriate actions specified in the contract to correct deficiencies.

Construction BMPs and self-monitoring are part of every contract requirement. For projects that are one acre in size, a WPCP is developed and projects greater than one acre, a SWPPP is developed. The Construction Project Manager ensures that a SWPPP (or WPCP) is developed and in place prior to the commencement of construction activities.

Department of General Services CIP

Project Contract Managers develop the project scope of work based on needs identified as part of the five-year plan. Construction project contract management is conducted by a Project Manager in the Facilities Management Division. Project contract documents are prepared to include Stormwater Specifications to ensure that project implementation includes the necessary construction BMPs and is compliant with the CGP, if applicable. Once the contract document is completed, a notice to invite bids or proposal for the contract is sent to prospective contractors and posted on the County website. Project contractors are selected according to purchasing and contracting procedures.

Contract administration and monitoring is conducted by the Stormwater Inspector. If a deficiency is observed, the Stormwater Inspector will provide a written warning to the contractor, the construction supervisor, and the project manager. The Construction Project Manager administering the contract may impose sanctions if the contractor fails to take appropriate actions specified in the contract to correct deficiencies.

Construction BMPs and self-monitoring are part of every contract requirement. For projects that are one acre in size, a WPCP is developed and projects greater than one acre, a SWPPP is developed. The Construction Project Manager ensures that a SWPPP (or WPCP) is developed prior to the commencement of construction activities.

4.5.2.2 Feedback and Verification

The following sections describe the different activities associated with the municipal feedback and verification processes including inspections and enforcement.

4.5.2.2.1 Inspection Process

DPW CIP Inspections

Prior to the start of the construction project, the Resident Engineer conducts a site visit to verify that the contractor has BMPs in place per the approved WPCP or SWPPP and the BMP material necessary for a

Jurisdictional Runoff Management Program

weather triggered action plan. The Resident Engineer conducts Quality Assurance (QA) inspections to ensure proper installation and maintenance of BMPs, overall implementation of the approved WPCP or SWPPP, and to determine if the contractor is practicing self-monitoring inspections as required in the contract. As part of the QA inspection, the Resident Engineer is inspecting for, reporting, and, under certain circumstances, directing the cleanup or removal of illegally dumped material or spills or discharges through illicit connections within the limits of the construction site, and forwarding inspection reports on a weekly or monthly basis to the Construction Stormwater Coordinator. All issues of non-compliance are identified via the QA inspection reports and summary of findings. Reports are forwarded to the DPW-CIP Construction Engineering office and compiled in a summary with a compliance code assigned (1 = In Compliance, 2 = Substantial Compliance-Minor Deficiencies Noted, 3 = Non-Compliance-Major Deficiencies or Discharge(s) Noted). This QA inspection summary is then forwarded to office staff and other relevant departments (e.g., Watershed Protection Program). The Resident Engineer tracks open items and provides the status of corrections on subsequent QA inspection reports. In addition, the Resident Engineer is responsible for ensuring annual certification of compliance for projects that require a SWPPP. The annual report is submitted into SMARTS upon acceptance. Upon completion of the project, the Resident Engineer will verify that all contract requirements have been met and that all post-construction BMPs are in place and in proper working condition. For some DPW Priority Development Projects (PDPs), appropriate steps must be taken to transfer permanent maintenance of structural BMPs to the appropriate section: Transportation (Field Operations), the Flood Control District (FCD), Wastewater, or Airports. Applicability and detailed guidance can be found in the Director's Letter of Instruction (DLI) ES-G.

DPR CIP Inspections

Project Managers make sure that the BMPs are in place before the start of construction and make routine inspections until project completion. Records of inspections are kept in each project file. If a Project Manager finds deficiencies, he/she immediately notifies the contractor and instructs them that compliance is required, and a follow up inspection is scheduled to ensure all issues of non-compliance have been corrected. All issues of non-compliance are tracked using field inspection reports.

DGS CIP Inspections

DGS staff conducts stormwater inspections. If any issues of noncompliance are observed, DGS staff is required to inspect the site within 10 days after a correction notice has been issued or at the next scheduled site meeting. If a Notice of Violation is issued, then the correction is required to be completed within 24 hours. These reports are issued via email to the contractor, Project Manager, and site stormwater officer (if the site has one). The reports are then filed in the project folder and electronically saved in a stormwater folder located on the DGS internal drive. For some DGS PDPs, appropriate steps must be taken to transfer permanent maintenance of structural BMPs to the Facilities Operation Group. Applicability and detailed guidance for both scenarios can be found within separate DGS written procedures that are available for review.

Jurisdictional Runoff Management Program

4.5.2.2.2 *Inspection Frequencies*

DPW CIP Inspection Frequency

Table 4.4 lists the minimum inspection frequencies for DPW CIP projects. The inspection frequency should be increased, if necessary, as dictated by CGP requirements. Additional inspections should also be conducted, as necessary, to confirm that the site reduces the discharge of pollutants to the maximum extent practicable (MEP) and effectively prohibits non-stormwater discharges. During phase(s) of the project in which there is no potential for stormwater, non-stormwater, or sediment discharge from the development area, the County may choose to reduce or completely suspend site inspections.

Table 4.4 - Department of Public Works, Capital Improvement Program Projects, Construction Inspection Frequencies

Project Priority	Minimum Inspection Frequency	Inspection Prioritization Criteria
Medium	Monthly	<ul style="list-style-type: none"> ▪ Project boundary is less than one acre (WPCP projects).
High	Weekly	<ul style="list-style-type: none"> ▪ Project boundary greater than or equal to one acre (SWPPP projects); or ▪ Project presents a high Threat to Water Quality*.
* The determination of the TTWQ is described in Section 4.2.4.		

DPR CIP Inspection Frequency

Most DPR CIP projects are small projects restricted to very small areas such as playgrounds. Project Managers make every effort to inspect active construction sites prior to rain events, and after rain events all active projects are inspected to ensure adequate BMP implementation. For projects of short duration, less than a week, projects are inspected at the beginning and end of the project. Table 4.5 lists the minimum inspection frequency for these projects. The inspection frequency may be increased, if necessary, as dictated by CGP requirements. Additional inspections may also be conducted, as necessary, to confirm that the site reduces the discharge of pollutants to the MEP and effectively prohibits non-stormwater discharges. During phase(s) of the project in which there is no potential for stormwater, non-stormwater, or sediment discharge from the development area, the County may choose to reduce or completely suspend site inspections.

Table 4.5 - Department of Parks and Recreation, Capital Improvement Program Projects, Construction Inspection Frequencies

Project Priority	Minimum Inspection Frequency	Inspection Prioritization Criteria
Low	As needed	<ul style="list-style-type: none"> ▪ Project boundary is less than one acre
Medium	Monthly	<ul style="list-style-type: none"> ▪ Project boundary is greater than or equal to one acre and is not tributary to an environmentally sensitive area
High	Weekly	<ul style="list-style-type: none"> ▪ Project boundary with active grading and planned grading greater than 5,000 cubic yards; or ▪ Project presents a high TTWQ.

DGS CIP Inspection Frequency

The Department of General Services CIP projects are categorized as high, medium, or low priority. Projects that are less than one acre are either classified as low or medium priority depending on the scale

Jurisdictional Runoff Management Program

of construction activity and soil disturbance occurring onsite. Table 4.6 below lists the minimum inspection frequency for these projects. The inspection frequency may be increased, if necessary, as dictated by CGP requirements. Additional inspections may also be conducted, as necessary, to confirm that the site reduces the discharge of pollutants to the MEP and effectively prohibits non-stormwater discharges. During phase(s) of the project in which there is no potential for stormwater, non-stormwater, or sediment discharge from the development area, the County may choose to reduce or completely suspend site inspections.

Table 4.6 - Department of General Services, Capital Improvement Program Projects, Construction Inspection Frequencies

Project Priority	Minimum Inspection Frequency	Inspection Prioritization Criteria
Low	As Needed	<ul style="list-style-type: none"> ▪ Project boundary is less than one acre in size and short duration or minimum soil disturbance. ▪ Project site is inactive
Medium	Monthly	<ul style="list-style-type: none"> ▪ Project boundary is less than one acre (WPCP projects).
High	Weekly	<ul style="list-style-type: none"> ▪ Project boundary greater than or equal to one acre (SWPPP projects); or ▪ Project presents a high TTWQ.

Jurisdictional Runoff Management Program

5.0 EXISTING DEVELOPMENT COMPONENT

5.1 REQUIREMENTS FOR ALL EXISTING DEVELOPMENT

The 2013 MS4 Permit establishes requirements for all existing development, including industrial, commercial, municipal, and residential facilities. The requirements relate to inventory and tracking, Best Management Practices (BMPs) implementation and maintenance, and inspections. This section discusses general requirements that are applicable to all existing development, while subsequent sections provide additional detail based on development type (i.e., Industrial/Commercial, Municipal, or Residential). Figure 5.1-1 shows the relationships between the different over-arching existing development requirements.

5.1.1 Inventory

The County must keep an inventory of all existing development. The inventories are watershed based and are updated at least annually, including maps. The inventory must include the following information for each facility or area:

- Name and location
- Description of facility
 - Industrial, Commercial, Municipal, or Residential
 - Status (active or inactive)
 - Identify if mobile or stationary
 - SIC Code or NAICS Code (if applicable)
 - Industrial General Permit Notice of Intent (NOI) and/or Waste Discharge Identification (WDID) number (if applicable)
 - Pollutants generated or potentially generated
 - Whether the facility is adjacent to an Environmentally Sensitive Area (ESA)
 - Whether the facility is tributary to an impaired water body

As shown in Figure 5.1-1, the information from the inventory, specifically pollutant-generating activities (PGAs) and pollutants of concern (POCs), is used to establish Threat to Water Quality as well as identify minimum required BMPs.

5.1.2 Best Management Practice Requirements

Each facility has the potential to discharge pollutants into the municipal separate storm sewer system (MS4) and impact local water quality. Pollution prevention methods are typically used as an initial mechanism for reducing discharges of pollutants into regional MS4s. Often, the most cost effective and simple solution to reducing pollution is to implement pollution prevention

Jurisdictional Runoff Management Program

techniques at the source. The County also requires minimum site and activity specific BMPs to be implemented, and inspections and enforcement procedures are conducted to verify compliance and, in some cases, to provide more site-specific direction for BMP implementation.

Minimum BMP requirements for each type of PGA are provided in Attachments 5.2 and 5.6 based on the requirements in the Watershed Protection Ordinance (WPO). The specific application of BMPs is determined on a site-by-site basis to address the specific PGAs applicable to each facility. As shown in Figure 5.1-1, potential sources for additional site specific BMPs include Stormwater Pollution Prevention Plans (SWPPPs), Facility Pollution Prevention Plans (F3Ps), and California Stormwater Quality Association (CASQA) Handbooks.

5.1.3 Inspections

5.1.3.1 Threat to Water Quality (TTWQ)

Threat to Water Quality is a metric used by the County to determine appropriate inspection frequency and/or inspection type. The specific criteria for determining TTWQ varies between industrial/commercial, municipal, and residential facilities, and is discussed in greater detail in the following sections.

5.1.3.2 Inspection Frequency

As required by the 2013 MS4 Permit, inventoried existing development will be inspected, at a minimum, once every five years, with an equivalent of at least 20 percent of the inventoried industrial, commercial, and municipal facilities undergoing onsite inspections annually. The inspections performed on the 5-year cycle can be onsite inspections, drive-by inspections, or visual inspections (publically accessible) by trained volunteers. The frequency of inspections may need to increase if the site is specifically identified as a priority in the Water Quality Improvement Plan (WQIP), in response to a valid public complaint, or in cases of continued non-compliance. The frequency must also be appropriate to confirm that BMPs are being implemented to reduce the discharge of pollutants and prohibit non-stormwater discharges.

5.1.3.3 Inspection Content

Inspections must include an assessment of the presence of non-stormwater discharges, potential discharge of pollutants, and potential illicit connections. The inspection should also confirm that the description of the facility has not changed from what is recorded in the current inventory.

Onsite inspections are intended to be more detailed and should assess the implementation of BMPs and verify coverage under the Industrial General Permit (if applicable).

5.1.3.4 Inspection Tracking and Records

Records of all inspection and re-inspections will be kept and retained in an electronic database. The records must include the following information:

- Name and location
- Date

Jurisdictional Runoff Management Program

- Inspection method (i.e., drive-by, onsite)
- Observations and findings
- Descriptions of any problems or violations
- Descriptions of any enforcement actions
- Date that problems or violations were resolved

Inspection results and records, in conjunction with monitoring results, will be considered as part of the ongoing adaptive management process, as shown in Figure 5.1-1.

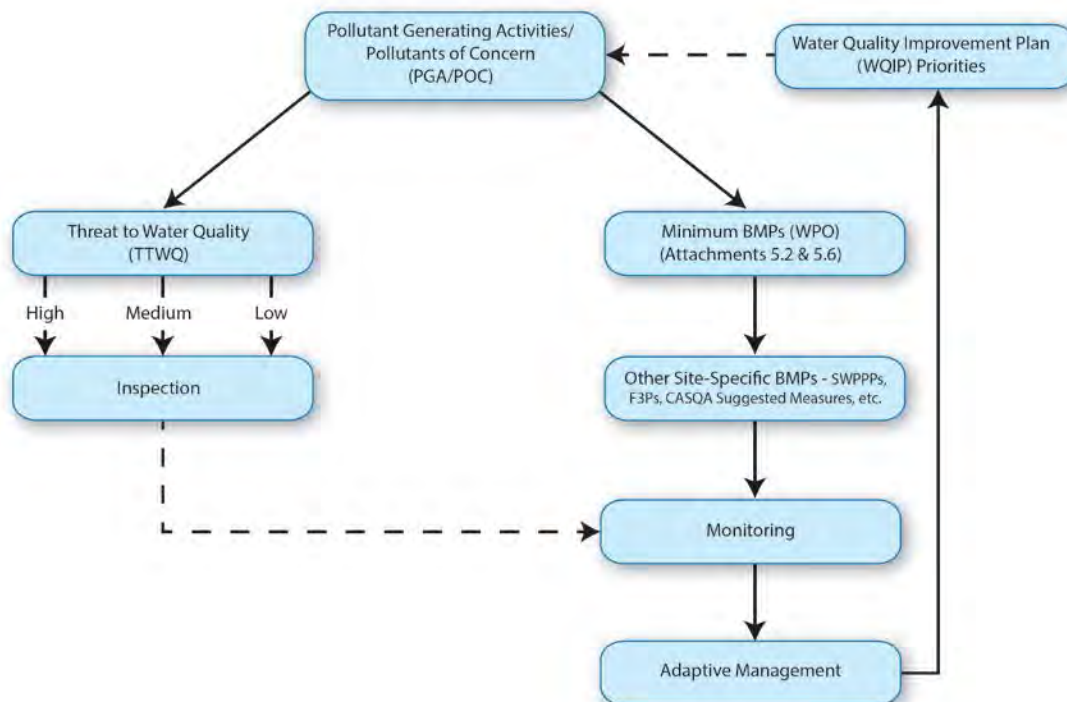

Figure 5.1-1 Existing Development Flow Chart

Jurisdictional Runoff Management Program

5.2 INDUSTRIAL AND COMMERCIAL

5.2.1 Introduction

The overall goal of the Industrial and Commercial section is to establish a programmatic framework for the implementation of activities to minimize or eliminate the impact of discharges from industrial and commercial businesses on receiving waters and other sensitive environmental resources. Two departments share responsibility for the oversight of business facilities and activities in the County Unincorporated area. The Department of Agriculture, Weights, and Measures (AWM) educates operators, inspects facilities, and oversees BMP implementation at agricultural businesses such as nurseries, greenhouses, pest control operations, golf courses, and cemeteries. The Department of Public Works (DPW) provides similar oversight for other commercial and industrial businesses in the County's inventory.

The framework in this section considers the fact that watershed-based WQIPs have been created to prioritize pollutants and develop reduction strategies that consider likely pollutant sources and associated land uses.

5.2.2 Inventory

The County's industrial and commercial inventories include commercial businesses and industrial facilities. Examples of industrial facilities include manufacturing facilities and fleet maintenance businesses. Commercial facilities include auto repair shops, restaurants, equine facilities, and wholesalers. Mobile business operations also are included in the commercial inventory. These facilities are mapped in Figure 5.2-1.

5.2.3 Best Management Practice Requirements

Industrial and commercial sites / sources must meet the applicable requirements set out in the WPO. These include operating practices and structural controls to reduce or eliminate the discharge of pollutants in runoff. The use of pollution prevention (P2) practices is always encouraged, and, where applicable, will be required to address the priorities and strategies in the WQIPs. BMP requirements and options for each type of PGA are provided in Attachment 5.2. The specific application of BMPs is determined on a site-by-site basis to address the specific PGAs applicable to each facility. The BMP requirements for industrial and commercial sites / sources are reviewed annually and updated as necessary.

Jurisdictional Runoff Management Program

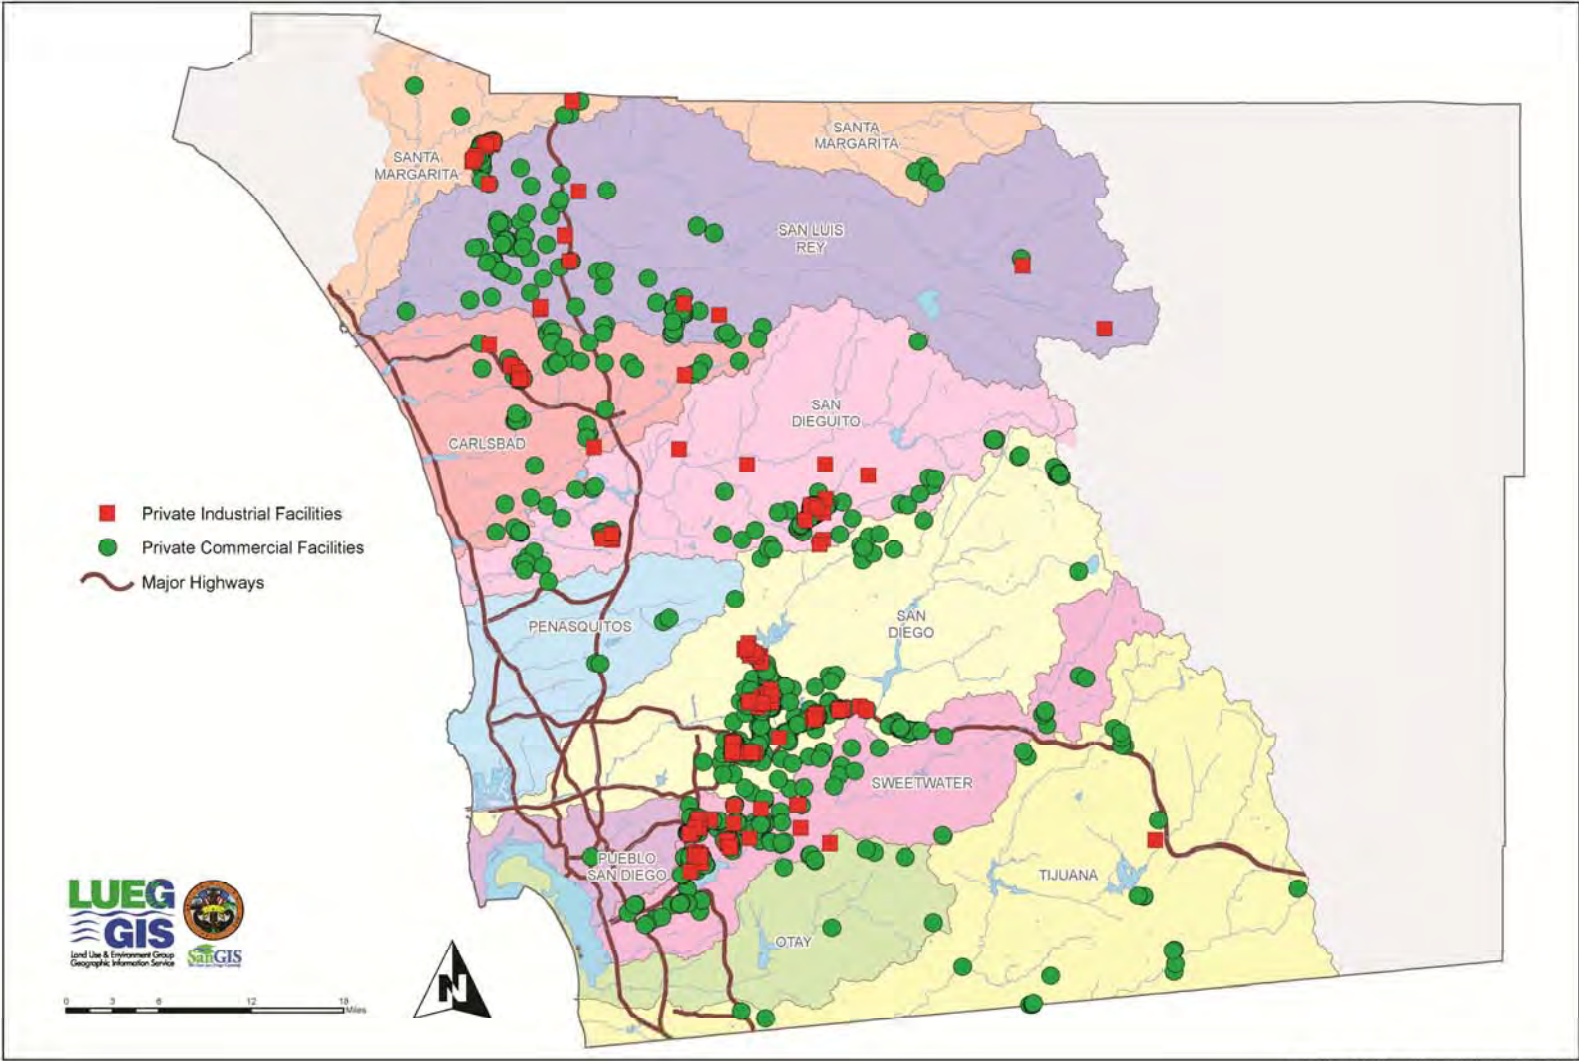

Figure 5.2-1 Industrial and Commercial Facilities in the County Unincorporated Area

Jurisdictional Runoff Management Program

5.2.4 Inspections

All industrial and commercial facilities must be inspected, at a minimum, once every five years, with an equivalent of at least 20 percent of the inventoried facilities undergoing onsite inspections annually. The inspections performed on the 5-year cycle can be onsite inspections, drive-by inspections, or visual inspections (publically accessible) by trained volunteers. The frequency of inspections may need to increase if the site is specifically identified as a priority in the WQIP, in response to a valid public complaint, or in cases of continued non-compliance. The frequency must also be appropriate to confirm that BMPs are being implemented to reduce the discharge of pollutants and prohibit non-stormwater discharges.

TTWQ should be used when selecting facilities for onsite inspections. The following items should be considered in determining TTWQ:

- Proximity to a Clean Water Act (CWA) section 303(d) impaired water body segment (that generates pollutants for which the water body segment is impaired).
- Proximity to coastal lagoons or other sensitive receiving waters or areas, and operations pose significant potential of discharging pollutants.
- Potential to discharge pollutants (from stormwater or non-stormwater) to the MS4, i.e., site design and construction, pollutant-generating activities, irrigation, and material and waste handling.
- Facility compliance history (for BMP deficiencies).
- Degree of management oversight, as determined by the inspector's observation of the shop operations and review of stormwater-related documents.

Other factors that influence the TTWQ determination include prioritization tools (e.g., GIS applications and various resource databases), knowledge of pollutant-generating activities and associated BMPs, and best professional judgment. The County continually provides refresher training and discussion in staff meetings to maintain inspector consistency in prioritization.

Jurisdictional Runoff Management Program

5.3 MUNICIPAL

5.3.1 Introduction

In compliance with the 2013 MS4 Permit, the following sections establish a programmatic framework to identify and characterize municipal pollution sources and recommend BMPs to minimize the impact of illegal discharges on receiving waters.

The County owns and operates a wide assortment of facilities. Facilities range from general office buildings to large-scale operations such as airports, wastewater treatment plants, and closed landfills. Attachment 5.8 presents a watershed-based list of County-owned and operated facilities. Linear infrastructure like streets and stormwater conveyance systems are also included within the County's municipal program. The County also participates in a variety of activities that are not associated with a fixed location. These activities include "Pesticide, Herbicide, and Fertilizer application," "Non-emergency Fire Fighting," and "Special Events." Chapter 2 Appendix 1 illustrates the organization relationship of the departments and groups primarily responsible for implementing the Municipal Component.

The remainder of this section is organized according to the following municipal source types:

- Roads, Streets, and Highways (section 5.3.2);
- Municipal Separate Storm Sewer System (MS4; section 5.3.3);
- Solid Waste Facilities (section 5.3.4);
- Wastewater Facilities (section 5.3.5);
- Road Stations (section 5.3.6);
- Fleet Maintenance (section 5.3.7);
- Municipal Airfields (section 5.3.8);
- Parks and Recreational Facilities (section 5.3.9);
- Office Buildings and Other Municipal Facilities including Household Hazardous Waste Collection Facility (section 5.3.10);
- Pesticide, Herbicide, and Fertilizer Management (section 5.3.11);
- Non-emergency Fire Fighting Activities (section 5.3.12); and
- Special Events (section 5.3.13).

5.3.1.1 *Regulatory Requirements*

Under 2013 MS4 Permit Section E.1.a., Legal Authority Establishment and Enforcement, the County "must establish, maintain, and enforce adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 through statute, ordinance, permit, contract, order, or similar means." The County's WPO regulates the protection of water resources and

Jurisdictional Runoff Management Program

water quality by controlling polluted run-off discharges from entering receiving waters and the waters of the state (see Attachment 2.2). Municipal Facilities must meet the requirements set out in the WPO.

5.3.1.2 Facility Threat to Water Quality and Prioritization

Many of the County's facilities and sites conduct activities in their ongoing operations which have the potential to generate pollutants. These areas include streets, parking facilities, MS4s, landfills, water and wastewater treatment plants, solid waste transfer facilities, land application sites, maintenance and storage yards, household hazardous waste facilities, airfields, parks and recreation facilities, and special events. Some of these are located in areas tributary to impaired water bodies. In order to proactively reduce the chances of pollutants impacting local waters, the County has developed a system of assessing its facilities and activities, and applying BMPs suitable to address the types of associated pollutants.

The first step is to assess the risk to water quality. For this purpose, the County has established a Threat to Water Quality (TTWQ) questionnaire, Attachment 5.5, to determine each municipal facility or property's potential TTWQ. For County-owned and operated linear facilities, such as roads and MS4 elements, a separate TTWQ assessment is made which is described in further detail in the corresponding sections below. Information generated from this questionnaire is used to determine the self-audit and formal inspections frequencies. The questionnaire helps to determine the TTWQ by asking questions about onsite activities with a focus on PGAs and their associated POCs, proximity to an ESA, and previous compliance history. Upon review of the questionnaire, each site or facility is assigned a TTWQ rating of low, medium, or high.

In support of the TTWQ determination and BMP selection, Table 5.1.17 is included in Attachment 5.1 to provide a list of PGAs that are typically associated with work performed within each of the municipal departments/divisions. Each of these municipal PGAs is described in detail in Attachment 5.4. The PGAs and related POCs for each Department and group of the County, whose operations are subject to the existing development requirements, are outlined for each subsection of the Municipal Component in tables included in Attachment 5.10.

5.3.1.3 Inspections

5.3.1.3.1 Municipal Self-Inspections

The County prioritizes self-inspections of its municipal inventory based on a site's TTWQ. Sites or facilities with the lowest threat level are required to annually conduct a self-inspection and maintenance as required. The moderate level threat establishes a medium priority and requires quarterly self-inspection and maintenance. Sites with the highest TTWQ are considered the highest priority and must perform monthly self-inspections and maintenance.

5.3.1.3.2 Stormwater Protection Program Audits

Audits are performed by the Watershed Protection Program (WPP) staff independent of the site's self-inspections. The TTWQ of a site determines the audit frequency by WPP. Sites determined to have the highest TTWQ are audited annually, while sites with a moderate threat are audited

Jurisdictional Runoff Management Program

twice per permit cycle, and sites with a low threat are audited once per permit cycle. Audits ensure periodic review of stormwater practices and self-audit documentation at County facilities and properties. The audit process validates compliance with minimum BMP requirements and reinforces the need for appropriate BMPs to meet the requirements of the 2013 MS4 Permit and WPO. Audits also ensure that water quality protecting BMPs are functioning as needed and are reducing the discharge of pollutants from the MS4 and helping to eliminate non-stormwater discharges. These audits are also conducted to pay particular attention to locations with the potential to discharge pollutants prioritized by each watershed's WQIP. Additionally, audits provide a mechanism to evaluate program effectiveness through annual reviews and inter-departmental reporting. These audits are counted toward the County's compliance with the 2013 MS4 Permit's minimum inspection frequency requirements.

Regardless of the priority, the County inspects 20 percent of its existing development inventory annually to determine compliance with ordinance and permit requirements as well as the condition of onsite BMPs. The data recorded during these inspections are maintained within a database used to track compliance and determine re-inspection progress where needed. These existing development audits and inspections include visual inspections for the presence of non-stormwater discharges, discharge of pollutants, illicit connections, and also a determination that the condition of the facility has not changed. Where appropriate, the State's stormwater Industrial General Permit coverage and BMP requirements are verified and enacted as required.

5.3.1.4 *Minimum Best Management Practices*

The County is required to designate, implement and maintain various types of BMPs for all of its existing development and those BMPs must be specific to the PGAs of that facility or area. The BMP requirements are outlined per the corresponding WPO Sections for each PGA in Section C of Attachment 5.2. These BMPs are being implemented, operated and maintained by the County on all municipal facilities and areas within its inventory of existing development within its jurisdiction. All facilities and sites classified as high TTWQ must establish and maintain either a SWPPP or a F3P to document the selection of designated BMPs appropriate for each site's PGAs. All other sites and facilities must implement the appropriate minimum BMPs as referenced in Attachment 5.2. Maintenance for BMPs follows a schedule which ensures the ongoing operation of these facilities and structures and follows intervals specific to each BMP category needed to minimize the discharge of pollutants.

This TTWQ determination and the resulting frequency of inspections for municipal facilities goes above and beyond the requirements of the 2013 MS4 Permit, and is emblematic of the County's commitment to protecting local water quality.

Jurisdictional Runoff Management Program

5.3.2 Roads, Streets, Highways, and Parking Facilities Element

5.3.2.1 Background

DPW Roads crews work in areas all over the County Unincorporated area, from bustling towns to scenic county roads, and are responsible for maintaining nearly 2,000 miles of roads. This County-maintained system serves approximately 400,000 residents each day. Many segments of roads in the County are maintained by other agencies. For example, freeways and state highways (SR 52, 76, 78, 94, etc.) are maintained by Caltrans, and private roads are maintained by adjacent property owners.

5.3.2.2 Inventory

The County operates an inventory of 1,939 miles of road surfaces. Table 5.3-1 provides a general inventory of roads, streets, and highways maintained by the County of San Diego and confined within the County limits. Due to its size, a more detailed roads inventory is not included in this report, but can be provided on request.

Table 5.3-1 General Inventory of County Roads

Type of Road Surface	Miles of Roads
Paved Roads	1,808
Unpaved Roads	104
Concrete Roads	27
Total	1,929

Figure 5.3-1 illustrates the general distribution of the County's road network. Detailed maps can also be accessed directly on-line at:

<http://www.sandiegocounty.gov/content/sdc/dpw/roads/crs.html>.

Jurisdictional Runoff Management Program

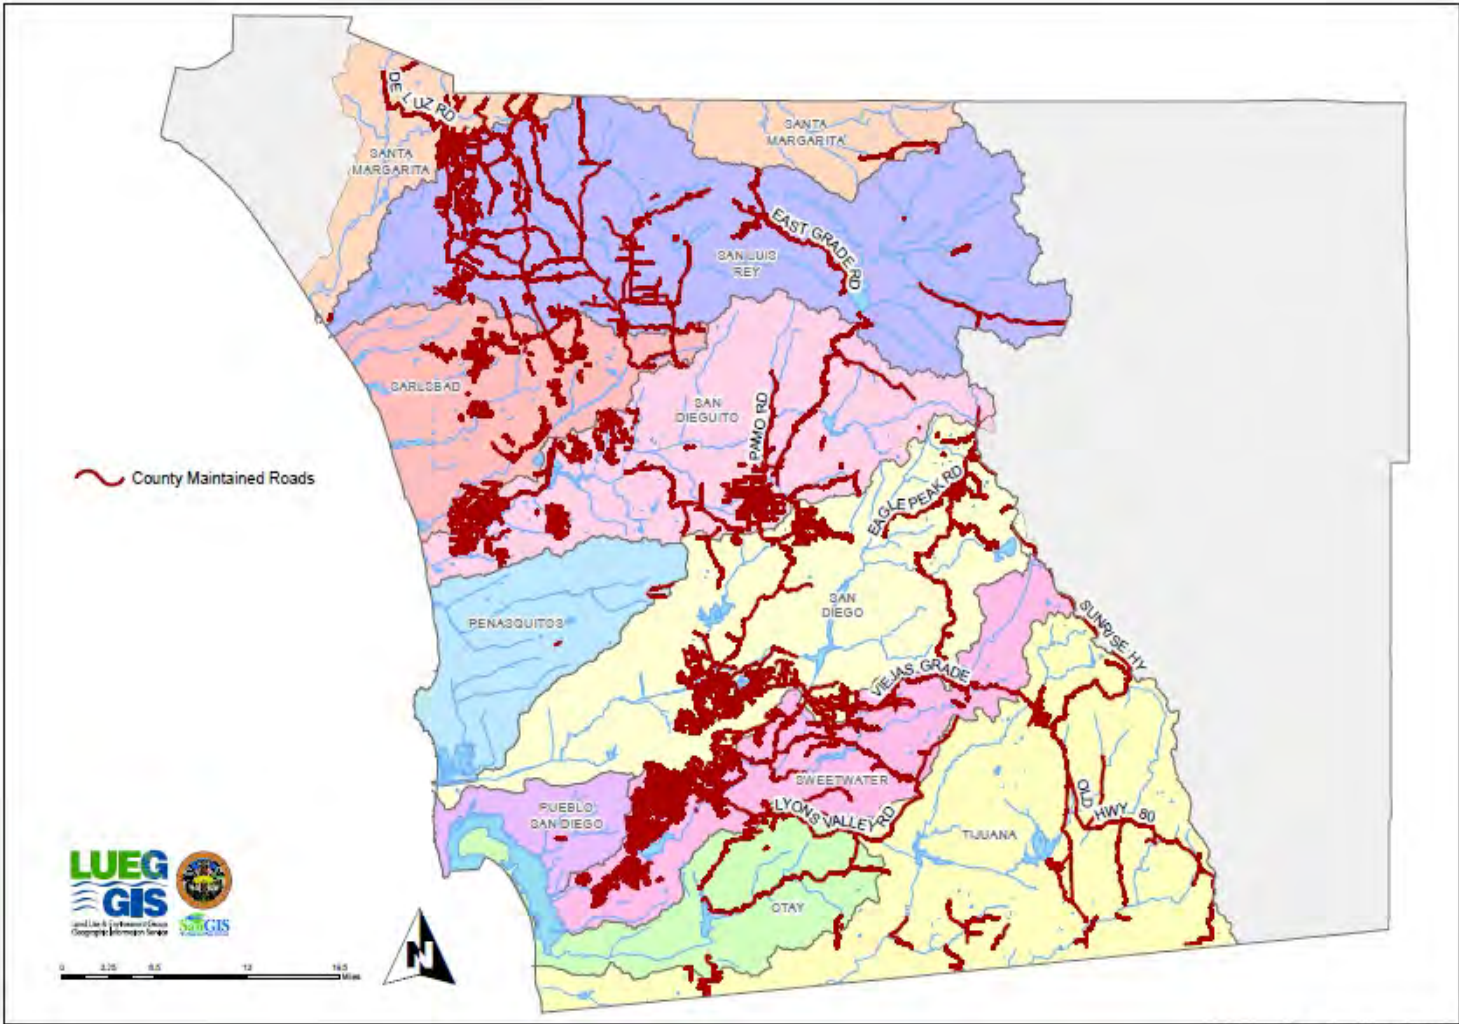

Figure 5.3-1 General Map of County Roads Network

Jurisdictional Runoff Management Program

Roads are among the highest priority sources of pollutants in the County Unincorporated area. Because waste generation for individual road segments tends to be highly variable, the County uses the Average Daily Traffic (ADT) as an indicator of the potential volume of trash and/or debris that may be generated. The table below presents the criteria used to prioritize roads, streets, and highways for sweeping. Individual roads, streets, and highways may also be re-prioritized as appropriate based on historical data, field observations, or other relevant factors.

Table 5.3-2 TTWQ Criteria for Roads, Streets and Highways

TTWQ	Category Description	Average Daily Traffic (ADT) Criterion
High	Roads, streets, highways, and parking facilities identified as consistently generating the highest volumes of trash and/or debris	ADT of more than 20,000 vehicles
Moderate	Roads, streets, highways, and parking facilities identified as consistently generating moderate volumes of trash and/or debris	ADT between 20,000 and 15,000 vehicles
Low	Roads, streets, highways, and parking facilities identified as generating low volumes of trash and/or debris	ADT of less than 15,000 vehicles

Parking facilities are assessed and reported individually in relation to the property or building in which it is associated. For example, parking-lots associated with road stations are assessed, maintained, and reported under the Road Stations Element (Section 5.3.6), as are lots associated with Parks (Section 5.3.9), Buildings (Section 5.3.10), etc.

Table 5.3-3 Overview of Program Activities Associated with Roads, Streets and Highways

Activity	Definition	Examples
Sweeping	Sweeping of roads provides two primary benefits to the County of San Diego. The more obvious benefit is the collection and removal of paper, leaves, and other visible debris in the gutters. Debris can block the catch basins and other stormwater facilities, causing localized flooding during heavy rains. An equally important, but less visible benefit is the removal of metal particles, and other toxic waste products left by passing vehicles.	<ul style="list-style-type: none"> ▪ Sweeping inspection ▪ Scheduled sweeping ▪ Sweeping reports
Maintenance	One of the responsibilities of the County of San Diego, Roads Division is the maintenance of roads, streets and highways. The goal of this service is to effectively and economically preserve the County's 1,929 miles of roads infrastructure. Roads generally break up because preventive maintenance work was not done in a timely manner, there is more and heavier traffic on the roadway than it was built to handle, or the soil beneath the roadway fails. In addition to other maintenance activities, such as weed abatement and striping.	<ul style="list-style-type: none"> ▪ Pothole repair ▪ Resurfacing ▪ Striping ▪ Weed abatement ▪ Pavement preventative maintenance

Jurisdictional Runoff Management Program

Activity	Definition	Examples
Public Service Requests	Besides presenting a poor appearance, litter and trash can cause traffic hazards and affect drainage. Each year DPW crews remove more than 1,300 tons of litter along County-maintained roads. Driving hazards and large items are their first priority for removal. The public can help by reporting trash.	<ul style="list-style-type: none"> ▪ Graffiti toll free hotline (1-877-684-8000) ▪ Trash Help Line (858-874-4040)
Other Programs	Other programs require public assistance from businesses, or community commitment to implement new activities that can help to keep roads litter-free.	<ul style="list-style-type: none"> ▪ Adopt-A-Road program: Designates certain road sections (two miles) for private assistance with litter removal.

5.3.2.3 *Activities and Pollutants*

The operation and maintenance of roads, streets, and highways involves a variety of activities with the potential to contribute to stormwater pollution. Table 5.3-3 above provides a general overview and description of key program activities. Appendix 5.10 lists the PGAs potentially associated with the operation of roads, streets, and highways, and indicates the POCs typically associated with them. Specific PGAs and POCs associated with Roads, Streets, and Highways vary depending on their actual uses and operations, and may therefore differ from those presented. Attachment 5.4 presents and defines a comprehensive listing of PGAs applicable to municipal operations and program implementation

Chapter 2 Appendix 1 shows the organizational relationship of DPW staff with primary responsibility for administering and implementing the Roads, Streets, and Highways element. Key roles and responsibilities are also summarized in Table 5.3-4.

Jurisdictional Runoff Management Program

Table 5.3-4 DPW Implementation Roles and Responsibilities for the Roads Element

Program Activity	Responsible Staff
Administrative Activities	
<u>Annual Program Reviews:</u> To ensure continued compliance with the 2013 MS4 Permit and implementation plans, program managers annually review applicable facilities inventories, BMP requirements, policies and procedures, and implementation strategies.	<ul style="list-style-type: none"> ▪ Roads Supervisors ▪ Equipment Operators
<u>Contract Administration:</u> For any construction, maintenance, repair, or other work with the potential to release pollutants to the MS4, contracts should include applicable provisions to prohibit releases and ensure BMP implementation. Regardless of the likelihood of discharging pollutants, contractors are responsible for meeting all applicable stormwater requirements.	<ul style="list-style-type: none"> ▪ Road Superintendents ▪ Asst. Road Superintendents ▪ Senior Civil Engineers
<u>Staff and Contractor Training:</u> DPW - Roads staff and contractors with runoff management responsibilities must receive training as determined and prioritized by County jurisdiction and/or watershed to address the highest priority water quality conditions identified in the WQIP. Contractor training may either be provided by County staff or required as a contract condition.	<ul style="list-style-type: none"> ▪ Roads Supervisors
BMP Implementation	
<u>BMP Implementation:</u> BMPs are implemented by DPW - Roads staff and contractors as needed to address the specific activities and pollutants identified.	<ul style="list-style-type: none"> ▪ Roads Supervisors ▪ Equipment Operators ▪ Construction Technicians
<u>Contract Work:</u> For any construction, maintenance, repair, or other work with the potential to release pollutants to the MS4, contracts should include applicable provisions to prohibit releases and ensure BMP implementation. Regardless of the likelihood of discharging pollutants, contractors are responsible for meeting all applicable stormwater requirements.	<ul style="list-style-type: none"> ▪ Contractors
Compliance Verification	
<u>Compliance Documentation and Reporting:</u> All staff is responsible for ensuring adequate documentation of urban runoff within their areas of defined responsibility.	<ul style="list-style-type: none"> ▪ Roads Supervisors ▪ Senior Civil Engineers
<u>Inspections:</u> Inspections are conducted to assess maintenance and cleaning requirements. The frequency of inspections is appropriate to confirm that BMPs are being implemented to reduce the discharge of pollutants in stormwater from the MS4 to the MEP and effectively prohibit non-stormwater discharges to the MS4 (Permit Section II.E.5.c.[1][a]ii)	<ul style="list-style-type: none"> ▪ Equipment Operators

Jurisdictional Runoff Management Program

<p><u>Special Investigations</u>: Special studies and investigations are occasionally needed to evaluate BMP options or to gather data and information necessary for program planning or assessment. These activities are determined on an as-needed basis.</p>	<ul style="list-style-type: none"> ▪ Management

5.3.2.4 *Best Management Practice Requirements*

2013 MS4 Permit Section II.E.5.b.(1) requires the implementation, use and maintenance of pollution prevention methods via BMPs at municipal facilities and areas. These BMPs are being implemented, operated and maintained by the County on all municipal facilities and areas within its inventory of existing development within its jurisdiction. Maintenance for its BMPs follows a schedule which ensures the ongoing operation of these facilities and structures and follows intervals specific to each BMP category needed to minimize the discharge of pollutants.

The most important BMP for roads, streets, and highways is sweeping. The County has previously established an annual street sweeping target as a minimum standard for all paved roads regardless of location, infrastructure improvements, or proximity to watercourses. In addition, regular inspections are conducted to assess specific sweeping needs. By ensuring minimum sweeping frequencies, and progressively increasing effort where needed, the County ensures an appropriate level of cleaning for all its roads. Paved roads in urbanized areas or with infrastructure improvements are swept, on average, three times annually. Additionally, roadways with bike lanes are swept at least monthly to remove bicycle hazards such as glass.

Sweeping data are collected by DPW Roads crews. Sweeping frequency and amounts of material collected vary by area, which may indicate regional variability in road conditions or may simply be a reflection of the size and characteristics of the road crew territory itself. Other variables include weather, linear feet of curb/gutter and sidewalk (more in urban station areas), unique occurrences (fire, flood, etc.), and contractor performance.

Roads, Streets, and Highways must also meet the applicable requirements set out in the WPO, municipal facilities must meet the BMP standards established by the County for equivalent operations conducted at commercial and industrial businesses. The use of pollution prevention (P2) practices is always encouraged where practicable. P2 practices that are generally recognized as being effective and economically advantageous at Roads, Streets, and Highways should be implemented. Specific BMP requirements are determined on a site-by-site basis to address the pollutant generating activities applicable to each facility. These requirements are reviewed annually and updated as necessary.

5.3.2.5 *Inspections*

The County inspects all of its existing municipal inventory in order to ensure that the 2013 MS4 Permit's requirements are being met and water quality protecting BMPs are functioning as needed and are reducing the discharge of pollutants from the MS4 and helping to eliminate non-stormwater discharges. These inspections are conducted to pay particular attention to locations with the potential to discharge pollutants prioritized by each watershed's WQIP. At a minimum, the County inspects 20

Jurisdictional Runoff Management Program

percent of its existing development inventory annually by utilizing visual inspections to determine compliance with ordinance and permit requirements as well as the condition of onsite BMPs. The data recorded during these inspections is maintained within a database used to track compliance and determine re-inspection progress where needed.

Jurisdictional Runoff Management Program

5.3.3 Municipal Separate Storm Sewer System (MS4) Element

5.3.3.1 Background

DPW Flood Control and DPW Road Maintenance crews share responsibility for the maintenance of existing stormwater drainage structures and the construction of new County MS4 structures. DPW Flood Control personnel build and maintain flood protection structures and flood warning systems, collect hydrologic data, assure projects meet flood control requirements, and comply with Federal Emergency Management Agency (FEMA) guidelines for the National Flood Insurance Program. DPW Road Maintenance crews are responsible for monitoring and maintaining portions of the MS4 that are affiliated with the maintenance of roads, streets, and highways in the County Unincorporated area. They are responsible for the curb and gutter systems, culverts, and storm drain structures that are part of these roads, streets, and highways. They are also responsible for some portions of the MS4 that are easily accessible by road personnel such as flood control channels immediately adjacent to a road or highway system and within the County right-of-way. DPW Flood Control personnel are responsible for all other MS4 structures that are not associated with a road, street, or highway system.

5.3.3.2 Inventory

The County maintains approximately 4 miles of open channel, 2,065 miles of linear MS4 systems, 18,973 drainage inlets, and 13 flood detention structures in the County Unincorporated area. Flood Control and Road Maintenance crews work in conjunction to inspect, repair, and clean the MS4 to ensure that the system is working correctly and that stormwater is diverted away from populated areas. Inventories are maintained and recorded by Road and Flood Control personnel in individual databases that are later combined for reporting purposes. Table 5.3-5 identifies the County's inspection prioritization criteria. Table 5.3-6 provides a summary of MS4 structure types and a brief description of each.

In order to ensure full compliance with the 2013 MS4 Permit, the County has established a TTWQ questionnaire to determine each municipal facility or property's potential threat and subsequent inspection priority rating. The questionnaire determines the TTWQ by asking questions about onsite activities, proximity to an ESA, and previous compliance history. The TTWQ of a site determines the audit frequency. Sites determined to have the highest TTWQ are inspected annually, while sites with a low threat are inspected every other year.

Jurisdictional Runoff Management Program

Table 5.3-5 TTWQ Criteria for MS4 Structures

TTWQ	Description	Inspection Criteria
High	MS4 structures that are inspected annually	<ul style="list-style-type: none"> ▪ All new structures added to the MS4 inventory ▪ MS4 structures prone to flooding ▪ MS4 structures subject to Regional General Permit 53 standards (inspected annually between May 1 and September 30) ▪ MS4 structures subject to excessive amounts of trash and debris (accumulates trash and debris greater than 33 percent design capacity annually) ▪ MS4 structures that do not have a minimum of 2 years inspection data reflecting a low accumulation of trash and debris
Low	MS4 structures that are inspected at least every other year	<ul style="list-style-type: none"> ▪ MS4 structures that do not meet the criteria for high priority and have 2 years of inspection data reflecting a low accumulation of trash and debris

Table 5.3-6 Inventory of MS4 Elements within the County Unincorporated Area

Flood Control Device / Structure	Description	Linear Miles	Number
MS4 Open Channels (Self Cleaning)	Lined concrete flood control channels are inspected and maintained by County Flood Control personnel. Inlets to flood control channels prevent trash and debris from entering and are considered self-cleaning.	4	Not applicable
Linear MS4 Systems (Non-Self Cleaning)	Drainage systems located on public land or easements are primarily inspected and maintained by Road crews. Linear road drainage systems include curbed streets, gutters, and ditches that run along the road. Tracked by centerline miles.	2,061	Not applicable
Storm Drain Inlets	Any entrance to an enclosed underground stormdrain system that, by design, accepts surface water. Storm drain inlets and outlets include culvert openings and storm drain inlet boxes and cleanouts. Inlets commonly have grates that prevent large pieces of debris from entering the storm drain system and/or have boxes to trap debris. Inlets have to be regularly inspected and cleaned of debris by both Road and Flood Control personnel.	Not applicable	18,960
Catch Basins	Above-ground, catch (detention) basins typically are open, dry, sometimes vegetated, that utilize an outlet structure with a small orifice at the bottom to control the outflow of the water volume. Sediment, litter, and debris are typically captured at the inlet of the basin, or within the entire basin. Catch basins are primarily maintained by Flood Control personnel.	Not applicable	13
Total MS4		2,065	18,973

Jurisdictional Runoff Management Program

5.3.3.3 *Activities and Pollutants*

Appendix 5.11 provides a comprehensive listing of the PGAs potentially associated with the operation and maintenance of MS4 structures, and indicates the POCs typically associated with them. Specific PGAs and POCs associated with individual structures vary depending on their actual uses and operations, and may therefore differ from those presented. Descriptions of PGAs applicable to these and other municipal operations and activities are provided in Attachment 5.4.

5.3.3.4 *Program Implementation*

Chapter 2 Appendix 1 shows the organizational relationship of DPW staff with primary responsibility for administering and implementing the MS4 element. Key roles and responsibilities are summarized in Table 5.3-7.

Table 5.3-7 DPW Implementation Roles and Responsibilities for the MS4 Element

5.3.3.5 *Best Management Practice Requirements*

2013 MS4 Permit Section II.E.5.b.(1) requires the implementation, use and maintenance of pollution prevention methods via BMPs at municipal facilities and areas. These BMPs are being implemented, operated and maintained by the County on all municipal facilities and areas within its inventory of existing development within its jurisdiction. Maintenance for its BMPs follows a schedule which ensures the ongoing operation of these facilities and structures and follows intervals specific to each BMP category needed to minimize the discharge of pollutants.

Operation and maintenance of MS4 structures must also be conducted in accordance with the applicable requirements set out in the WPO. The use of P2 practices is always encouraged where practicable. P2 practices that are generally recognized as being effective and economically advantageous for MS4 structures should be implemented.

The operation and maintenance of County MS4s also involves other BMPs such as gabions, rip rap energy dissipaters, debris gates, grates, filter inserts and linear gross solids removal devices (“Lizard”). These devices are inspected and cleaned regularly with vector trucks and manual methods to ensure that they are clear of debris to prevent system backup and flooding. Specific BMP requirements are determined on a site-by-site basis to address the pollutant generating activities applicable to the area. These requirements are reviewed annually and updated as necessary.

5.3.3.6 *Inspections*

The County inspects all of its existing municipal inventory in order to ensure that the 2013 MS4 Permit’s requirements are being met and water quality protecting BMPs are functioning as needed

Jurisdictional Runoff Management Program

and are reducing the discharge of pollutants from the MS4 and helping to eliminate non-stormwater discharges. These inspections are conducted to pay particular attention to locations with the potential to discharge pollutants prioritized by each watershed's WQIP. At a minimum the County inspects 20 percent of its existing development inventory annually by utilizing visual inspections to determine compliance with ordinance and permit requirements as well as the condition of onsite BMPs. The data recorded during these inspections is maintained within a database used to track compliance and determine re-inspection progress where needed.

Jurisdictional Runoff Management Program

5.3.4 Solid Waste Facilities Element

5.3.4.1 Background

The County DPW - Landfill Management Unit manages the County's inactive landfills and former refuse burning sites (burn sites). Although these sites no longer accept municipal solid waste (trash), continued monitoring and maintenance is required to minimize impacts to the environment and to protect public health and safety. To that end, the County regularly monitors landfill gas generation and migration, groundwater quality, and stormwater runoff quality. The County also maintains various systems at the sites to control landfill gas emissions, mitigate impacts to groundwater, and to manage the flow and discharge of stormwater. On most of the sites, vegetation is used to control surface erosion. The County maintains inactive transfer stations that were previously used for collection of municipal solid waste in the rural communities of Campo, Dulzura, Alpine, and Julian.

5.3.4.2 Inventory

All County Solid Waste facilities including inactive and closed landfills and burn sites are listed in the County's inventory of existing municipal development. Thus, they are treated like all other facilities in this inventory with applicable BMP and inspection requirements as mandated by the 2013 MS4 Permit. Several of these sites including the closed landfills and burn sites have additional ongoing pollution prevention activities onsite which are regulated through permits and requirements outside of the 2013 MS4 Permit, these include State Waste Discharge Requirements, which cover numerous aspects of pollution prevention from these sites including stormwater. The burn sites are located on private and public property and are inspected by the Department of Environmental Health (DEH) Local Enforcement Agency (LEA) to ensure compliance with California solid waste regulations. Maintenance of cover soils and post closure land use activities are regularly inspected to ensure there is no disturbance that could pose a threat to public health or the environment. The County ensures that all of these requirements are met, and additional information is available from the County's Solid Waste Local Enforcement Agency.

The County uses its TTWQ questionnaire to determine each Solid Waste facility's or property's potential threat and subsequent inspection priority rating. The TTWQ of a site determines the audit frequency. Sites determined to have the highest TTWQ are audited annually, while sites with a moderate threat are audited twice per permit cycle, and sites with a low threat are audited once per permit cycle.

Table 5.3-8 provides a summary of the Solid Waste facilities inventory maintained by the County. A complete inventory may be found in Attachment 5.8; Figure 5.3-2 shows the geographical distribution of these facilities.

Jurisdictional Runoff Management Program

Table 5.3-8 Overview of the County’s Solid Waste Facilities Inventory

Type of Property	Description
Burn Sites (Inactive)	Unauthorized areas formerly used to collect and burn wastes prior to the availability of public landfills and services. Known burn sites are generally capped with a soil barrier and monitored or may be remediated (removal of all debris & ash). Due to the accumulated burning of solid waste over time, these sites may contain heavy metals and chemicals of environmental concern.
Closed Landfills (Inactive)	Former solid waste disposal sites that have been capped and retired, but are routinely monitored to prevent any release of waste. These sites generally consist of slopes and fields with native vegetation and minimal activity.
Transfer Stations	A remote location where solid wastes and/or recyclables were collected and transferred to a larger permanent solid waste facility.
Mitigation Sites	Property preserved as open space for mitigation purposes. Remediated (clean closed) burn-sites may be used as mitigation lands.
Buffer Properties	County owned property adjacent to a solid waste facility. Generally open space areas with native vegetation.

Jurisdictional Runoff Management Program

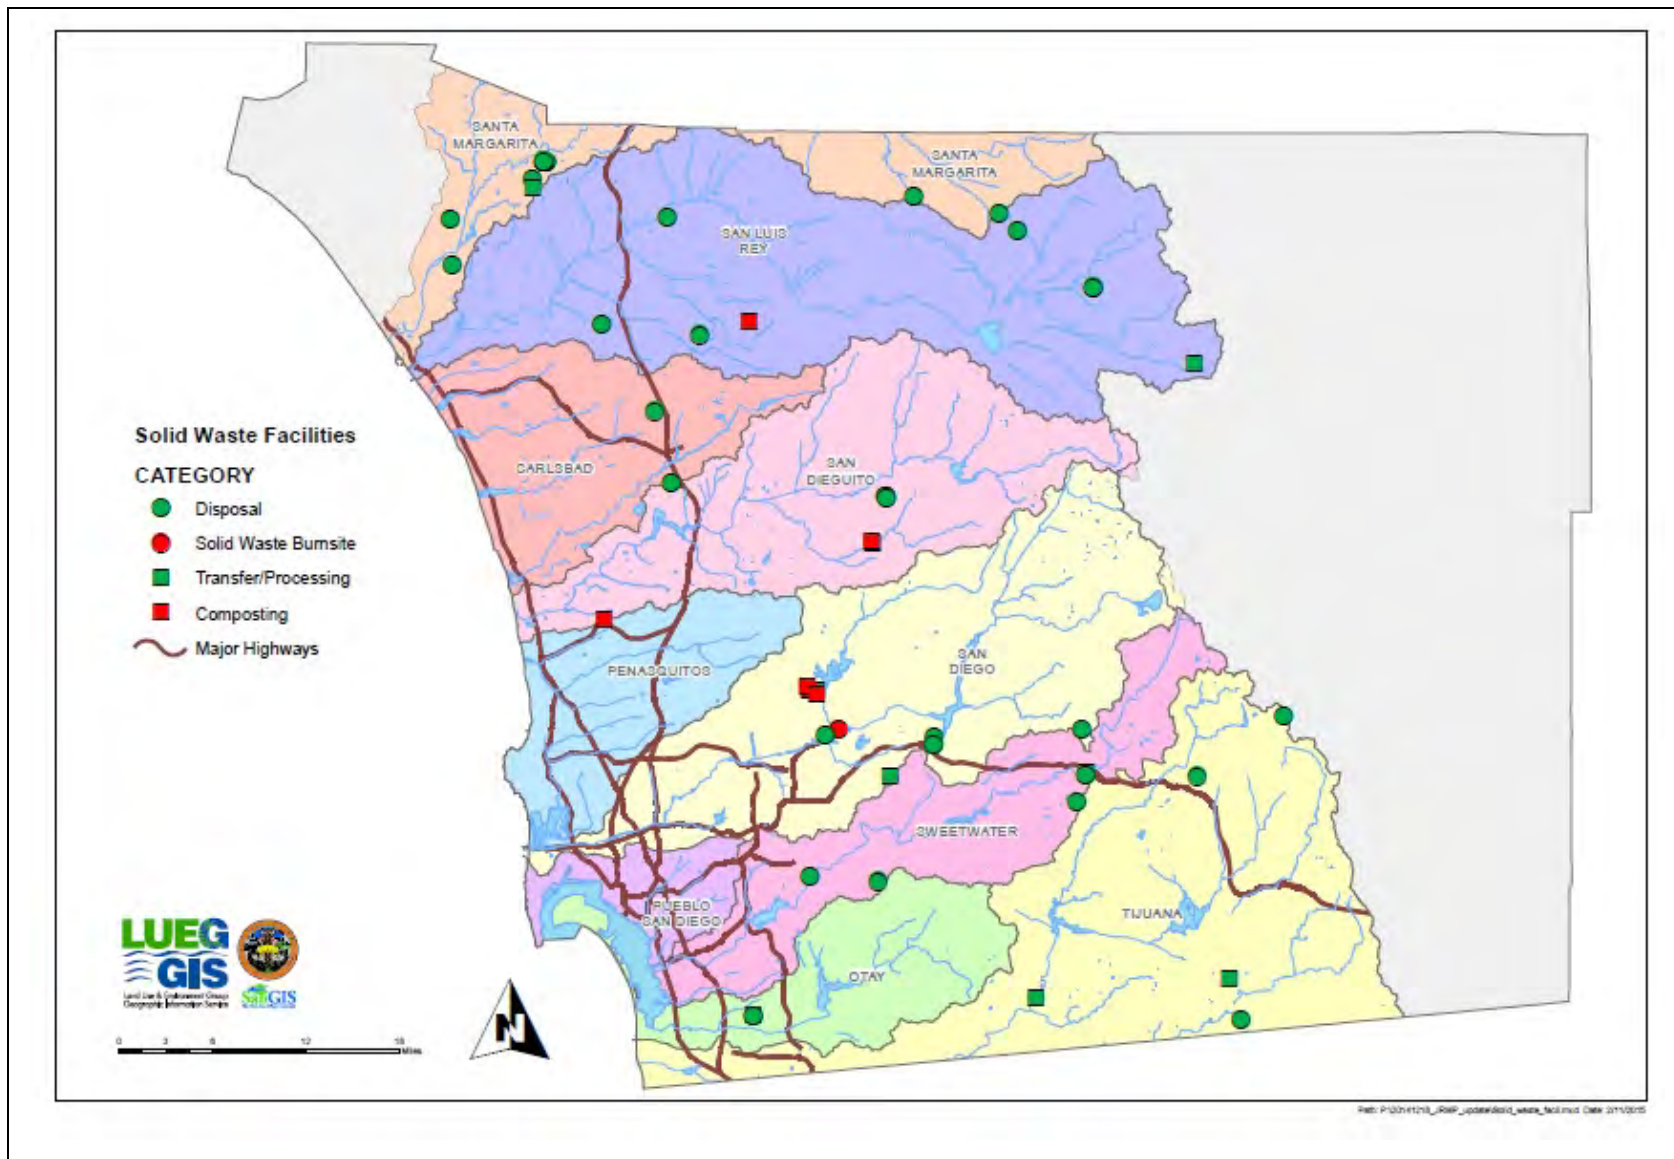

Figure 5.3-2 Solid Waste Facilities in the County Unincorporated Area

Jurisdictional Runoff Management Program

5.3.4.3 *Activities and Pollutants*

Appendix 5.11 provides a comprehensive listing of the PGAs potentially associated with the operation of Solid Waste facilities, and indicates the POCs typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual use and operation, and may therefore differ from those presented.

5.3.4.4 *Program Implementation*

Chapter 2 Appendix 1 shows the organizational relationship of DPW staff with primary responsibility for administering and implementing the Solid Waste Facilities element. Key roles and responsibilities are also summarized in Table 5.3-9.

Table 5.3-9 DPW Implementation Roles and Responsibilities for the Solid Waste Element

Program Activity	Responsible Staff
ADMINISTRATIVE ACTIVITIES	
<u>Annual Program Reviews:</u> To ensure continued compliance with the 2013 MS4 Permit and implementation plans, program managers annually review applicable facilities inventories, BMP requirements, policies and procedures, and implementation strategies.	<ul style="list-style-type: none"> ▪ Unit Manager ▪ Sr. Civil Engineer ▪ Program Coordinator
<u>Annual Pollution Prevention Plan Reviews:</u> Stormwater pollution prevention plans (SWPPPs) are required for all industrial high priority facilities. Facility Pollution Prevention Plans (F3Ps) are required for those facilities that are not under the Industrial General Permit, but covered under the 2013 MS4 Permit instead. Each SWPPP or F3P describes the facility location, identifies and describes onsite PGAs, describes BMP requirements, and identifies implementation roles and responsibilities. SWPPPs and F3Ps are reviewed annually and updated as needed.	<ul style="list-style-type: none"> ▪ Unit Manager ▪ Sr. Civil Engineer ▪ Program Coordinator ▪ Engineer Technician

5.3.4.5 Best Management Practice Requirements

2013 MS4 Permit Section II.E.5.b.(1) requires the implementation, use and maintenance of pollution prevention methods via BMPs at municipal facilities and areas. These BMPs are being implemented, operated and maintained by the County on all municipal facilities and areas within its inventory of existing development within its jurisdiction. Maintenance for its BMPs follows a schedule which ensures the ongoing operation of these facilities and structures and follows intervals specific to each BMP category needed to minimize the discharge of pollutants.

Solid waste facilities must meet the applicable requirements set out in the WPO. The use of P2 practices is always encouraged where practicable. P2 practices that are generally recognized as being effective and economically advantageous at solid waste facilities should be implemented.

Specific BMP requirements are determined on a site-by-site basis in each F3P or SWPPP to address the pollutant generating activities applicable to the facility. BMPs are implemented by Landfill Management and staff. BMP requirements are reviewed annually and updated as necessary.

Jurisdictional Runoff Management Program

5.3.4.6 *Inspections*

The County inspects all of its existing municipal inventory in order to ensure that the 2013 MS4 Permit's requirements are being met and water quality protecting BMPs are functioning as needed and are reducing the discharge of pollutants from the MS4 and helping to eliminate non-stormwater discharges. These inspections are conducted to pay particular attention to locations with the potential to discharge pollutants prioritized by each watershed's WQIP. At a minimum the County inspects 20 percent of its existing development inventory annually by utilizing visual inspections to determine compliance with ordinance and permit requirements as well as the condition of onsite BMPs. The data recorded during these inspections is maintained within a database used to track compliance and determine re-inspection progress where needed.

Jurisdictional Runoff Management Program

5.3.5 Wastewater Facilities Element

5.3.5.1 Background

The DPW Wastewater Management Program operates an extensive wastewater collection system consisting of approximately 432 miles of gravity and transmission force mains, pump stations, and water pollution control facilities. The DPW Wastewater Management Program operates and maintains these facilities to prevent any adverse impact to surface and groundwater, health hazards, property damage and service interruptions resulting from accidental Sanitary Sewer Overflows (SSO).

5.3.5.2 Inventory

The Wastewater Management Program manages a variety of facilities including publicly owned treatment works, pump stations, conveyance structures, and an office headquarters. Table 5.3-10 provides an updated overview of the types of facilities maintained and operated by the County. These facilities are also mapped in Figure 5.3-3; a complete inventory of wastewater facilities is included in Attachment 5.8.

Table 5.3-10 Overview of the Wastewater Facilities Inventory

Type of Property	Description
Publicly Owned Treatment Works	A wastewater processing facility that removes waste and toxins from the water in order to meet standards for human health and the environment prior to discharge.
Pump Station	Pumping facilities used to pressurize the waste so that it can be transferred to a wastewater processing facility. The remote areas of land are generally unmanned and fenced off from the public.
Gravity/Force Mains/Manholes	Wastewater structures designed and operated to convey wastewater from sources to a treatment plant or similar facility.
Headquarters	Base of operations for DPW Wastewater personnel. Office building only.

Each Publicly Owned Treatment Works (POTW) has a discharge permit issued by the Regional Water Quality Control Board (Regional Board).

<p><u>Contract Work:</u> For any construction, maintenance, repair, or other work with the potential to release pollutants to the MS4, contracts should include applicable provisions to prohibit releases and ensure BMP implementation. Regardless of the likelihood of discharging pollutants, contractors are responsible for meeting all applicable stormwater requirements.</p>	<ul style="list-style-type: none"> ▪ Contractors
Compliance Verification	
<p><u>Compliance Documentation and Reporting:</u> All staff is responsible for ensuring adequate documentation of runoff within their areas of defined responsibility.</p>	<ul style="list-style-type: none"> ▪ Collection Engineering & Operations Manager ▪ Sanitation Supervisors ▪ Wastewater Facilities Supervisor
<p><u>Facility Self-Inspection:</u> Quarterly and monthly facility inspections are conducted to assess compliance with runoff management requirements. These typically consist of visual inspections for the presence of actual non-stormwater discharges; visual inspections for the presence of actual or potential discharge of pollutants; visual inspections for the presence of actual or potential illicit connections; and verification that the description of the facility or area in the inventory, required pursuant to Provision E.5.a.(2), has not changed.</p>	<ul style="list-style-type: none"> ▪ Wastewater Facilities Supervisors ▪ Wastewater Plant Operators
<p><u>Facility Auditing:</u> Auditing of DPW - Wastewater Management facilities is conducted by the DPW WPP staff. Auditing schedules and frequencies are determined based on TTWQ and compliance history.</p>	<ul style="list-style-type: none"> ▪ DPW WPP Inspectors
<p><u>Special Investigations:</u> Special studies and investigations are occasionally needed to gather data and information necessary for program planning or assessment. These activities are determined on an as-needed basis.</p>	<ul style="list-style-type: none"> ▪ Varies

5.3.5.5 *Best Management Practice Requirements*

2013 MS4 Permit Section II.E.5.b.(1) requires the implementation, use and maintenance of pollution prevention methods via BMPs at municipal facilities and areas. These BMPs are being implemented, operated and maintained by the County on all municipal facilities and areas within its inventory of existing development within its jurisdiction. Maintenance for its BMPs follows a schedule which ensures the ongoing operation of these facilities and structures and follows intervals specific to each BMP category needed to minimize the discharge of pollutants.

Jurisdictional Runoff Management Program

Wastewater facilities must meet the applicable requirements set out in the WPO. The use of P2 practices is always encouraged where practicable. P2 practices that are generally recognized as being effective and economically advantageous at wastewater facilities should be implemented.

Specific BMP requirements are determined on a site-by-site basis in each facility's F3P to address the pollutant generating activities applicable to the facility. BMPs are implemented by Wastewater Management and staff. BMP requirements are reviewed annually and updated as necessary.

5.3.5.6 *Inspections*

The County inspects all of its existing municipal inventory in order to ensure that the 2013 MS4 Permit's requirements are being met and water quality protecting BMPs are functioning as needed and are reducing the discharge of pollutants from the MS4 and helping to eliminate non-stormwater discharges. These inspections are conducted to pay particular attention to locations with the potential to discharge pollutants prioritized by each watershed's WQIP. At a minimum the County inspects 20 percent of its existing development inventory annually by utilizing visual inspections to determine compliance with ordinance and permit requirements as well as the condition of onsite BMPs. The data recorded during these inspections is maintained within a database used to track compliance and determine re-inspection progress where needed.

Jurisdictional Runoff Management Program

5.3.6 Road Stations Element

5.3.6.1 Background

The DPW oversees the Roads Division, which manages road facilities servicing almost 2,000 miles of San Diego County public roads. The road station crews in bright orange vests, shirts and hard hats, are the most visible part of DPW, responding to requests for services including improvement projects, street sweeping, pothole repair, tree trimming, etc.

5.3.6.2 Inventory

The County operates a number of road facilities and oversees additional County-owned properties leased by third parties for commercial business. Roads Division crews oversee the operation of the following types of facilities: road stations, closed road stations, borrow pits, excess right-of-ways, and leased properties. The TTWQ of a site determines the audit frequency. Sites determined to have the highest TTWQ are audited annually, while sites with a moderate threat are audited twice per permit cycle, and sites with a low threat are audited once per permit cycle. The County has designated “Corporate yards” as high TTWQ and individual road facilities are assessed further for TTWQ by WPP. Attachment 5.8 provides a watershed-based inventory of the road facilities owned or operated by the County, and Table 5.3-12 provides a description of the major types of facilities. Figure 5.3-4 shows the geographical distribution of these facilities.

Table 5.3-12 Overview of the County’s Road Facilities Inventory

Type of Property	Description
Road Stations	County-owned and operated staging areas for County Road Maintenance. Facilities generally include DPW and DGS operations such as buildings for equipment and material storage, crew offices, garages for vehicle and equipment maintenance, vehicle wash rack, and fueling station.
Closed Road Stations	Vacant County-owned parcels of land that were once used as road stations.
Borrow Pits	Parcels of land used as temporary storage of raw materials during road maintenance.
Excess Right of Way	Open space area adjacent to roads for future expansion and clearance from private lands. May be used temporarily as a road maintenance staging area.
Leased Properties	County-owned properties leased by third parties for commercial business.

The data recorded during these inspections is maintained within a database used to track compliance and determine re-inspection progress where needed.

Jurisdictional Runoff Management Program

5.3.7 Fleet Maintenance Element

5.3.7.1 Background

The Department of General Services (DGS) oversees the Fleet Management Division which provides support, repair and preventive maintenance services for County-owned vehicles and equipment. Fleet Management maintains a part shop, manages the County's vehicle replacement program, supervises operations of the fueling station facilities, and manages yearly vehicle registration, licensing, emissions and safety inspection processes.

5.3.7.2 Inventory

The County of San Diego Fleet Management Division operates the County's garage facilities and oversees the fuel stations. The TTWQ of a site determines the audit frequency. Sites determined to have the highest TTWQ are audited annually, while sites with a moderate threat are audited twice per permit cycle, and sites with a low threat are audited once per permit cycle. "Corporate yards" are designated as high TTWQ by the County and individual fleet facilities are assessed further for TTWQ by WPP. Table 5.3-14 provides a description of the types of facilities. Attachment 5.8 provides a watershed-based inventory of all of the garage facilities and fuel stations.

Table 5.3-14 Overview of the County's Fleet Facilities Inventory

Type of Property	Definition
Garage	An establishment where cars are repaired, serviced, or parked. Commonly co-located with DPW Road Stations.
Fuel Station	A facility equipped to dispense fuel and lubricants for motor vehicles. Commonly co-located with DPW Road Stations.

5.3.7.3 Activities and Pollutants

Appendix 5.11 lists the PGAs potentially associated with the operation of each major category of Fleet Management Division facilities, and indicates the POCs typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Attachment 5.4 presents and describes a comprehensive listing of PGAs applicable to municipal operations and activities.

5.3.7.4 Program Implementation

Chapter 2 Appendix 1 shows the organizational flow chart for DGS staff with primary responsibility for administering and implementing the Fleet Maintenance element. Key roles and responsibilities are also summarized in Table 5.3-15.

5.3.7.5 *Best Management Practice Requirements*

2013 MS4 Permit Section II.E.5.b.(1) requires the implementation, use and maintenance of pollution prevention methods via BMPs at municipal facilities and areas. These BMPs are being implemented, operated and maintained by the County on all municipal facilities and areas within its inventory of existing development within its jurisdiction. Maintenance for its BMPs follows a schedule which ensures the ongoing operation of these facilities and structures and follows intervals specific to each BMP category needed to minimize the discharge of pollutants.

Fleet Management locations must meet the applicable requirements set out in the WPO. The use of P2 practices is always encouraged, as practicable. P2 practices that are generally recognized as being effective and economically advantageous at Fleet Management locations should be implemented.

Specific BMP requirements are determined on a site-by-site basis in each facility's F3P to address the PGAs applicable to the facility. BMPs are implemented by fleet management and staff. BMP requirements are reviewed annually and updated as necessary.

5.3.7.6 *Inspections*

The County inspects all of its existing municipal inventory in order to ensure that the 2013 MS4 Permit's requirements are being met and water quality protecting BMPs are functioning as needed and are reducing the discharge of pollutants from the MS4 and helping to eliminate non-stormwater discharges. These inspections are conducted to pay particular attention to locations with the potential to discharge pollutants prioritized by each watershed's WQIP. At a minimum the County inspects 20 percent of its existing development inventory annually by utilizing visual inspections to determine compliance with ordinance and permit requirements as well as the condition of onsite BMPs. The data recorded during these inspections is maintained within a database used to track compliance and determine re-inspection progress where needed.

Jurisdictional Runoff Management Program

5.3.8 Municipal Airports Element

5.3.8.1 Background

The County owns and operates four municipal airports within Region 9. These airports are located in the communities of Fallbrook, El Cajon, Carlsbad, and Ramona. Although all County airports share the basic similarity of providing flight and transportation services, each has unique surroundings and distinctive characteristics.

The DPW Transportation Division operates airports where activities typically include the maintenance of runways, ramps, terminals, hangars, and access roads. Airport operations also include leasing hangars, aircraft tie down space, and other areas of the airport property. Lessee's are required to comply with the "Rules and Regulations" for County Airports, which includes stormwater and water quality requirements.

5.3.8.2 Inventory

Table 5.3-16 is a summary inventory of County Airports. Attachment 5.8 contains a complete inventory of the municipal airfields. The TTWQ of a site determines the audit frequency. Sites determined to have the highest TTWQ are audited annually, while sites with a moderate threat are audited twice per permit cycle, and sites with a low threat are audited once per permit cycle.

Table 5.3-16 Overview of the County's Airports Inventory

Airport	Address	Acreage
Fallbrook Community Airport	2100 S. Mission Road, Fallbrook	290
Gillespie Field Airport	1960 Joe Crosson Drive, El Cajon	775
McClellan-Palomar Airport	2198 Palomar Airport Road, Carlsbad	487
Ramona Airport	2450 Montecito Road, Ramona	378

5.3.8.3 Activities and Pollutants

Appendix 5.11 provides a list of PGAs typically conducted at Airport Facilities. It also shows the POCs generally associated with each PGA type.

Aircraft maintenance, fueling and repair are the primary activities that occur at airports. Secondary activities such as ramp and runway inspection and maintenance are required due to safety and maintaining compliance with the Federal Aviation Administration (FAA) regulations. Many of these activities already incorporate effective BMPs that assist with the facilitation of water quality protection.

Specific BMP requirements are determined on a site-by-site basis in each SWPPP to address PGAs applicable to the facility. BMPs are implemented by airports management and staff. BMP requirements are reviewed annually and updated as necessary.

Jurisdictional Runoff Management Program

5.3.8.4 Program Implementation

Chapter 2 Appendix 1 shows an organizational flow chart for DPW staff with primary responsibility for administering and implementing the Airports element.

Two County airports are within the jurisdictional boundaries of incorporated cities: Gillespie Airport in the city of El Cajon and Palomar-McClellan Airport in the City of Carlsbad. Stormwater facility inspections may be coordinated with the County Airport representatives and stormwater inspectors from El Cajon and Carlsbad, respectively, to ensure compliance with water quality laws and regulations. Leases and contracts for fixed base operators, lessees, tenants, permit holders, and other airport users require each to abide by the “County of San Diego Airports Rules and Regulations,” which includes general and specific provisions for airport activities, as well as stormwater and water quality prohibitions.

Table 5.3-17 describes the designation of responsibilities and minimum frequencies for the program planning, facilitation activities, BMP implementation and feedback and verification review for Airport Facilities elements.

5.3.8.5 *Best Management Practice Requirements*

2013 MS4 Permit Section II.E.5.b.(1) requires the implementation, use and maintenance of pollution prevention methods via BMPs at municipal facilities and areas. These BMPs are being implemented, operated and maintained by the County in all municipal facilities and areas within its inventory of existing development within its jurisdiction. Maintenance for its BMPs follows a schedule which

Jurisdictional Runoff Management Program

ensures the ongoing operation of these facilities and structures and follows intervals specific to each BMP category needed to minimize the discharge of pollutants.

County Airports must meet the requirements set forth in the WPO.

Airports are designated as industrial facilities under the Standardized Industrial Classification: 4581. This designation requires airports to comply with the Industrial General Permit. SWPPPs and annual reports are completed for each airport and updated annually. The County Airports program participates in group monitoring to fulfill monitoring requirements for the Industrial General Permit.

All airport BMPs are implemented to the maximum extent practicable. However, they do not take precedence over federal and state safety regulations and associated requirements.

5.3.8.6 *Inspections*

The County inspects all of its existing municipal inventory in order to ensure that the 2013 MS4 Permit's requirements are being met and water quality protecting BMPs are functioning as needed and are reducing the discharge of pollutants from the MS4 and helping to eliminate non-stormwater discharges. These inspections are conducted to pay particular attention to locations with the potential to discharge pollutants prioritized by each watershed's WQIP. At a minimum the County inspects 20 percent of its existing development inventory annually by utilizing visual inspections to determine compliance with ordinance and permit requirements as well as the condition of onsite BMPs. The data recorded during these inspections is maintained within a database used to track compliance and determine re-inspection progress where needed.

Jurisdictional Runoff Management Program

5.3.9 Parks and Recreation Facilities Element

5.3.9.1 Background

Parks and Recreation Facilities enhance the quality of life in San Diego County by providing open space and recreational opportunities for residents and visitors. The Department of Parks and Recreation (DPR) manages many park locations totaling over 47,000 acres. A comprehensive program of maintenance, acquisition, and development of recreation facilities includes local and regional parks, fishing lakes, community centers, special use facilities, ecological preserves, and open spaces. Facilities are open year-round and are operated and maintained by County staff, volunteers, and service contracts.

5.3.9.2 Inventory

DPR crews oversee the operation and maintenance of open space parks, regional parks, local parks, sport parks, community centers, historical sites, and operation centers. Attachment 5.8 provides a watershed-based inventory of all of the Parks and Recreational facilities owned or operated by the County. Table 5.3-18 provides a description of each facility type. Figure 5.3-5 shows the geographical distribution of these facilities.

Table 5.3-18 Overview of the County’s Parks and Recreation Facilities

Type of Property	Description
Open Space Parks	Open Space Parks are areas generally free from development or developed with low intensity uses that respect natural environmental characteristics. Open Space Parks preserve natural resources and allow passive outdoor recreation and scenic enjoyment.
Regional Parks	Regional Parks are typically larger park facilities that can accommodate multiple uses or activities. These parks serve a population within a five-mile radius or greater.
Local Parks	Local Parks are typically smaller park facilities that serve a population within a 1-mile radius.
Sports Parks	These park lands commonly include sport fields, courts, and/or tracks.
Community Centers	Community Centers are facilities that meet the recreational, educational, and social needs of the local residents by offering services such as classes, events, and recreational activities.
Historic Sites	Buildings and property with historical significance have been preserved in the County as Historical Sites. Historical Sites offer the public recreational and educational opportunities through exhibits, collections, demonstrations, and activities.
Operations Centers	These facilities act as a base of operations for DPR personnel and provide storage for equipment and materials.

5.3.9.5 *Best Management Practice Requirements*

2013 MS4 Permit Section II.E.5.b.(1) requires the implementation, use and maintenance of pollution prevention methods via BMPs at municipal facilities and areas. These BMPs are being implemented, operated and maintained by the County in all municipal facilities and areas within its inventory of existing

Jurisdictional Runoff Management Program

development within its jurisdiction. Maintenance for its BMPs follows a schedule which ensures the ongoing operation of these facilities and structures and follows intervals specific to each BMP category needed to minimize the discharge of pollutants.

Parks and Recreation facilities must meet the applicable requirements set out in the WPO. The use of P2 practices is always encouraged where practicable. P2 practices that are generally recognized as being effective and economically advantageous at Parks and Recreation facilities should be implemented.

Specific BMP requirements are determined on a site-by-site basis in each facility's F3P to address the pollutant generating activities applicable to the facility. BMPs are implemented by DPR management and staff. BMP requirements are reviewed annually and updated as necessary.

5.3.9.6 *Inspections*

The County inspects all of its existing municipal inventory in order to ensure that the 2013 MS4 Permit's requirements are being met and water quality protecting BMPs are functioning as needed and are reducing the discharge of pollutants from the MS4 and helping to eliminate non-stormwater discharges. These inspections are conducted to pay particular attention to locations with the potential to discharge pollutants prioritized by each watershed's WQIP. At a minimum the County inspects 20 percent of its existing development inventory annually by utilizing visual inspections to determine compliance with ordinance and permit requirements as well as the condition of onsite BMPs. The data recorded during these inspections is maintained within a database used to track compliance and determine re-inspection progress where needed.

Jurisdictional Runoff Management Program

5.3.10 Office Buildings and Other Municipal Facilities Element

5.3.10.1 Background

The County owns and operates a variety of offices buildings and other municipal facilities throughout the San Diego Region. As part of the County's municipal obligation, these facilities are inspected and monitored internally. Due to the general nature of these offices and facilities many are inspected and maintained by the County DGS. While DGS monitors and inspects a majority of these facilities, other County departments such as DEH, Health and Human Services Agency (HHSA), DPW, AWM, Clerk of the Board (COB), Probation (DOP), Sheriff's Department, and the Controller and Assessors Office are obligated to meet stormwater standards for the activities they perform in respect to the facilities they occupy or use.

5.3.10.2 Inventory

The County operates a large inventory of office buildings and other municipal facilities. "Other municipal facilities" include all remaining miscellaneous facilities that are not easily categorized. Many of these facilities are occupied by a variety of County departments, but are maintained by DGS. Attachment 5.8 provides a watershed-based inventory of facilities that have the potential to affect the MS4 and receiving waters. Table 5.3-20 provides a description of each facility type.

Table 5.3-20 Overview of Office Buildings & Municipal Facilities

Type of Property	Description
Agriculture Weights and Measures Facilities	The Department of Agriculture, Weights and Measures operates a satellite location in Chula Vista with staff, vehicles, and chemicals.
Animal Shelters	Animal shelters are operated by County Department of Animal Services Control. These facilities temporarily house animals and serve as operational centers for Animal Control Services personnel.
Courthouses	Courthouses are operated by a multitude of County and State employees who provide legal services and civil protection.
Detention Facilities	Facilities operated by the County of San Diego Probation or Sheriff's Department that house those suspected or convicted of a crime and/or provide monitoring and outreach for offenders.
Libraries	Facilities primarily operated by the County Library Department that distribute books and other media information to the general public.
General Offices	Office buildings where County workers perform work tasks, documentation, etc.
Household Hazardous Waste (HHW) Collection Facilities	DEH Community Health Division oversees collection facilities providing services for approximately 169,000 households in the County Unincorporated area. The facilities provide residents with a responsible way to dispose or recycle their HHW. HHW collection occurs outdoors, however HHW is stored in containers under cover.

Jurisdictional Runoff Management Program

Type of Property	Description
HHSA Facilities	Facilities operated by the Health and Human Service Agency include health centers, family resource centers, children housing centers, psychiatric hospitals, senior citizen assistance centers, drug rehabilitation assistance centers, and other health related facilities. Some of these facilities act as housing for their clients.
Regional Operations Centers	Regional and operations centers usually contain various County departmental offices and/or operations within a business park like campus. Many of the activities that occur at these facilities are common, which make it difficult to assign responsibilities to individual departments.
Sheriff's Facilities	Facilities operated by the County of San Diego Sheriff's Department which include communication centers, crime labs, stations and substations used to store sheriff equipment and offices for personnel.

5.3.10.3 Activities and Pollutants

Appendix 5.11 lists the PGAs potentially associated with the operation of each major category of office buildings and other municipal facilities and indicates the POCs typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Attachment 5.4 presents and describes a comprehensive listing of PGAs applicable to municipal operations and activities.

5.3.10.4 Program Implementation

Table 5.3-21 summarizes key roles and responsibilities in implementing this element.

5.3.10.5 *Best Management Practice Requirements*

2013 MS4 Permit Section II.E.5.b.(1) requires the implementation, use and maintenance of pollution prevention methods via BMPs at municipal facilities and areas. These BMPs are being implemented, operated and maintained by the County on all municipal facilities and areas within its inventory of existing

Jurisdictional Runoff Management Program

development within its jurisdiction. Maintenance for its BMPs follows a schedule which ensures the ongoing operation of these facilities and structures and follows intervals specific to each BMP category needed to minimize the discharge of pollutants.

Office buildings and other municipal facilities must meet the applicable requirements set out in the WPO. The use of P2 practices is always encouraged where practicable. P2 practices that are generally recognized as being effective and economically advantageous at offices buildings and other municipal facilities should be implemented.

Specific BMP requirements are determined on a site-by-site basis in each facility's F3P to address the pollutant generating activities applicable to the facility. BMPs are implemented by DGS or other assigned county staff. BMP requirements are reviewed annually and updated as necessary.

5.3.10.6 Inspections

The County inspects all of its existing municipal inventory in order to ensure that the 2013 MS4 Permit's requirements are being met and water quality protecting BMPs are functioning as needed and are reducing the discharge of pollutants from the MS4 and helping to eliminate non-stormwater discharges. These inspections are conducted to pay particular attention to locations with the potential to discharge pollutants prioritized by each watershed's WQIP. At a minimum, the County inspects 20 percent of its existing development inventory annually by utilizing visual inspections to determine compliance with ordinance and permit requirements as well as the condition of onsite BMPs. The data recorded during these inspections is maintained within a database used to track compliance and determine re-inspection progress where needed.

Jurisdictional Runoff Management Program

5.3.11 Pesticides, Herbicides and Fertilizer Management Element

5.3.11.1 Background

All pesticide, herbicide, and fertilizer applications conducted by county staff are performed consistent with the laws and regulations set forth in the California Food and Agricultural Code, the California Code of Regulations, and the State General Permit for aquatic pesticide application to waters of the United States. Environmental and atmospheric conditions are considered prior to a pesticide application. Pesticide applications are monitored through inspections conducted by the County Department of Agriculture's Pesticide Regulatory Program (PRP). Required permits for the application of Restricted Use Pesticides are obtained through the PRP program that conducts an assessment of environmental factors as part of the permitting process. The County requires the implementation of all required BMPs associated with the application, storage, and disposal of pesticides, herbicides and fertilizers to reduce their exposure to stormwater to the maximum extent practicable. These BMPs include educational activities, permits, certifications, and other measures for applicators and distributors as appropriate.

Pesticide applicators employed by the County are required to obtain and maintain Qualified Applicator Certification (QAC) in categories consistent with the scope of pesticides applications they perform. Certification is obtained through the California Department of Pesticide Regulation and maintenance of certification includes fulfillment of continuing education credit requirements. The County of San Diego also employs Integrated Pest Management (IPM) methodology. IPM assesses the entire life cycle of a pest and its interaction with the environment and determines the most suitable techniques to reduce pest populations to acceptable levels while minimizing the use of pesticides and herbicides thus reducing their potential impact upon humans and the environment.

The management of pesticides, herbicides and fertilizers in parks as well as all other County-owned open spaces is the responsibility of the respective department. The Department of Parks and Recreation has certified applicators within their personnel and other departments, such as General Services, have certified contractors that provide the service on behalf of the County. AWM has certified applicators that provide support and oversee the proper use of pesticides, herbicides, and fertilizers along County paved and unpaved roads, excess right of ways, grounds landscaping, etc.

5.3.11.2 Activities and Pollutants

Appendix 5.11 provides a comprehensive listing of the PGAs potentially associated with the application of pesticides, herbicides, and fertilizers and indicates the POCs typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Descriptions of PGAs applicable to these and other municipal operations and activities are provided in Attachment 5.4.

5.3.11.3 Program Implementation

Chapter 2 Appendix 1 shows the organizational flow chart for AWM staff with primary responsibility for administering and implementing the Pesticides, Herbicides, and Fertilizer Element. Key roles and responsibilities are also summarized in Table 5.3-22.

5.3.11.4 *Best Management Practice Requirements*

2013 MS4 Permit Section II.E.5.b.(1) requires the implementation, use and maintenance of pollution prevention methods via BMPs at municipal facilities and areas. These BMPs are being implemented, operated and maintained by the County on all municipal facilities and areas within its inventory of existing development within its jurisdiction. Maintenance for its BMPs follows a schedule which ensures the ongoing operation of these facilities and structures and follows intervals specific to each BMP category needed to minimize the discharge of pollutants.

Examples of pesticide-application BMPs include the following:

- Use IPM to reduce pesticide and herbicide use and avoid runoff or leaching from excess chemical applications.
- Track pesticide applications by maintaining required pesticide application records.
- If rain or excessive wind is in the forecast, pesticide applications should be re-scheduled to avoid unnecessary runoff as required and in accordance with appropriate regulations.
- Storm drains in the immediate vicinity of pesticide application must be covered during treatment and all other required BMPs will be implemented.

Pesticide, herbicide, and fertilizer management must meet the applicable requirements set out in the WPO.

BMP requirements are reviewed annually and updated as necessary.

5.3.11.5 *Inspections*

The County inspects all of its existing municipal inventory in order to ensure that the 2013 MS4 Permit's requirements are being met and water quality protecting BMPs are functioning as needed and are reducing the

Jurisdictional Runoff Management Program

discharge of pollutants from the MS4 and helping to eliminate non-stormwater discharges. These inspections are conducted to pay particular attention to locations with the potential to discharge pollutants prioritized by each watershed's WQIP. At a minimum, the County inspects 20 percent of its existing development inventory annually by utilizing visual inspections to determine compliance with ordinance and permit requirements as well as the condition of onsite BMPs. The data recorded during these inspections is maintained within a database used to track compliance and determine re-inspection progress where needed.

Jurisdictional Runoff Management Program

5.3.12 Non Emergency Fire Fighting and Related Activities Element

5.3.12.1 Background

On June 25, 2008, the Board of Supervisors created the San Diego County Fire Authority (SDCFA) as a zone within County Service Area (CSA) 135 (Regional Communications). The SDCFA zone includes approximately 1.57 million acres of County Unincorporated area. The SDCFA was formed as the administrative agency to implement policy decisions, budgeting processes and integrate fire agencies into CSA 135. Additionally, the Fire Authority manages contracts with cooperative partners for fire services. The SDCFA sets the service standards and monitors the ability of each cooperative partner to comply, and develops, in cooperation with them, remediation plans as required.

The Fire Warden provides Executive Management-level direction to SDCFA. The Fire Warden acts as a liaison between local Chiefs and County land use officials. Day-to-day, direct leadership for the program is performed by the Program Manager. The mission of the SDCFA is to implement the building and fire codes in the County Unincorporated area and to assist fire agencies and organizations with equipment, training and apparatus in the protection of life, property and the environment. The County of San Diego is unique within the State of California in having 13 fire protection districts within its boundaries. Responsibility for the prevention and suppression of fire and emergency services in the County Unincorporated area is vested in a number of local, federal, state, and volunteer agencies. Generally, each local agency is responsible for structural fire protection and emergency medical response within their area of responsibility. Wild-land fires are the responsibility of the State (CAL FIRE) on state, Bureau of Indian Affairs land (BIA) and private lands and the federal government (U.S. Forest Service, Bureau of Land Management, BLM, etc.) on federally owned lands. However, mutual and automatic aid agreements enable non-lead fire agencies to respond to fire emergencies outside their district boundaries¹. Since most fire fighters are Emergency Medical Technician (EMT) certified, the County generally relies on fire departments, local districts and service areas to provide first responder medical service in the County Unincorporated area. Advanced life support and basic life support ambulance services are provided by various public and private agencies.

5.3.12.2 Inventory

In the County Unincorporated area, fire and emergency services outside of state and federally owned lands are provided by 13 fire protection districts, three County Service Areas, and five Municipal Water Districts (see Table 5.3-23). Tribal Lands Reservations also have fire departments that provide mutual fire service assistance to County Unincorporated areas that are near or bordering tribal lands. Fire and municipal water districts are also responsible for the enforcement of fire regulations as they relate to planning, construction and development.

The California Department of Forestry and Fire Protection (CAL FIRE) provides wild-land fire protection services for state owned and private lands outside of incorporated cities and designated by the State as State Responsibility Areas (SRA). CAL FIRE operates 18 fire stations and one Air Attack Base. Stations are open year-round with winter staffing funded by the state for a number of stations and the County up to an

¹ In San Diego County, most fire protection agencies are agency signatory to the State Master Mutual Aid Agreement, which enables non-lead agencies to respond to a fire emergency if requested. Independent fire districts may also choose to participate in automatic aid agreements, intended to have the closest fire station respond at the time of the call.

Jurisdictional Runoff Management Program

additional ten fire stations. Additional engines are funded by the state during the fire season (normally May through November). They respond to structural and vehicular fires and medical emergencies as well as wild-land fires. CAL FIRE provides structural fire protection services under contract to some local agencies.

The United States Forest Service (USFS) is responsible for fire protection, prevention and land management on federal lands within the boundaries of the Cleveland National Forest. USFS operates a total of 13 wild-land fire stations in San Diego County. The United States Fish and Wildlife Service (FWS) is responsible for fire protection, prevention and land management on federal preserve lands. FWS operates one wild-land fire station in San Diego County. The Bureau of Land Management contracts with CAL FIRE for suppression of fires on BLM land. Private land within or adjacent to federal land may be protected by the federal agencies under an agreement with CAL FIRE.

The phrase “Fire Departments,” as defined by the Consolidated Fire Code, refers to any regularly organized fire department, fire protection district, a legally formed volunteer fire department, or fire company regularly charged with the responsibility of providing fire protection to the jurisdiction. The term emergency, describes a situation that, in the opinion of the incident commander, is declared to be an emergency, and exists from the receipt of an alarm notification until the emergency has concluded and equipment is returned to service.

Fire fighting flows originating during emergency operations are exempted from discharge requirements as articulated by the 2013 MS4 Permit. However, other discharges related to fire agency activities (non-emergency) must be conducted in a manner consistent with stormwater management requirements.

5.3.12.3 Activities and Pollutants

Appendix 5.11 lists the PGAs potentially associated with the typical operations and responsibilities of each Fire Department. Specific PGAs occurring at individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. A complete listing of PGAs along with detailed descriptions of each is included in Attachment 5.4.

5.3.12.4 Program Implementation

Chapter 2 Appendix 1 shows the organizational flow chart for staff with primary responsibility for administering and implementing the non-emergency fire fighting element. The County will continue to work with Fire Departments to identify, update, and provide guidance on implementation of the stormwater program. However, the ultimate responsibility for ensuring compliance with stormwater requirements will reside with the individual Fire Departments. Key roles and responsibilities are also summarized in Table 5.3-24.

Jurisdictional Runoff Management Program

Table 5.3-24 SDCFA Implementation Roles and Responsibilities for the Non-emergency Fire Fighting Element

Significant Activity	Description	Responsible Staff
Administrative Activities		
Source Characterization	Activities and pollutant sources should be evaluated to ensure that all potential pollutants are accounted for and sufficiently addressed.	<ul style="list-style-type: none"> ▪ Fire Services Coordinator-Support Services
BMP Requirements and Recommendations	Regular review of BMPs will help identify improvement needs and corrective actions that should be taken. Where appropriate, BMPs should be revised to meet the MEP requirements.	<ul style="list-style-type: none"> ▪ Contract CAL FIRE Deputy Chief assign to the SDCFA
Implementation Strategies and Tools	Strategies to include outreach and education for communities through partnerships with associations, member agencies, and fire districts.	<ul style="list-style-type: none"> ▪ Contract CAL FIRE Deputy Chief assign to the SDCFA
Staff Training	Staff must receive training as determined and prioritized by the County and/or watershed to address the highest priority water quality conditions identified in the WQIP. Staff must be knowledgeable of stormwater requirements and be able to properly conduct their job responsibilities and implement BMPs.	<ul style="list-style-type: none"> ▪ Contract CAL FIRE Deputy Chief assign to the SDCFA, Fire Services Coordinator-Support Services
Facilitation of Targeted Outcomes		
Formal Agreements	Contracted services needs to include stormwater language and requirements included within the document. Stormwater requirements should also be provided to ensure that contractor is aware of issues or any specific requirements such as use of specific BMPs.	<ul style="list-style-type: none"> ▪ Fire Services Coordinator-Support Services
Permits	Where permits are required & issued by a County employee, language can be incorporated to include any applicable stormwater requirements.	<ul style="list-style-type: none"> ▪ Fire Services Coordinator-Support Services
Inspections	Inspections conducted by Fire Departments or County staff, should also address any applicable stormwater requirements. Inspection types include, fire extinguishing systems, storage lots (wood chips, compost, yard waste, recycling, etc.), etc.	<ul style="list-style-type: none"> ▪ Fire Services Coordinator-Fire Marshal/Fire Prevention Staff
Outreach	Community outreach will assist with customer acceptance and understanding of stormwater activities. Additionally, there are many considerations that home owners should make when implementing defensible space and maintaining surrounding vegetation. Opportunities include community events, association meetings, and fire station open house events.	<ul style="list-style-type: none"> ▪ All program staff

Jurisdictional Runoff Management Program

Significant Activity	Description	Responsible Staff
Training (municipal staff or contractors; “target audience”)	All County staff will receive annual stormwater training which is tailored to their specific job responsibilities. Since fire personnel are not employed by the County, the Fire Departments within the County Unincorporated area in Region 9 will receive a stormwater training presentation and handout materials.	<ul style="list-style-type: none"> ▪ All program staff
Partnerships (professional and industry organizations, etc.)	Partnerships with organizations help facilitate acceptance and implementation of stormwater requirements by the fire community. Partnerships provide a venue to provide training and outreach to the community as well as Fire Department personnel. Organizations that should be considered include: CDF, DFG, USFWS, Fire Chief Assoc., Fire District Assoc., SD County Fire Protection Districts (16), community groups and clubs, etc.	<ul style="list-style-type: none"> ▪ All Program Staff
Compliance Verification		
Internal Tracking by Program Staff	Document review/verification, and post activity observations via random sampling are means in which staff can verify that program responsibilities are appropriately implemented.	<ul style="list-style-type: none"> ▪ Contract CAL FIRE Deputy Chief assign to the SDCFA, Fire Services Coordinator-Support Services
Complaint Investigations	Complaints received regarding fire department discharges will be investigated as necessary to ensure compliance with stormwater regulations. Customer complaints, complaint referrals, and coordination with the WPP are methods which can provide feedback on the effectiveness of the program.	<ul style="list-style-type: none"> ▪ Contract CAL FIRE Deputy Chief assign to the SDCFA, Fire Services Coordinator-Support Services and WPP Inspectors

Jurisdictional Runoff Management Program

5.3.12.5 *Best Management Practice Requirements*

Fire Departments must meet the applicable requirements set out in the WPO. The use of P2 practices is always encouraged, and required where applicable and feasible. Specific application of BMPs is determined on a site-by-site basis to address the specific PGAs applicable to each activity. BMP requirements are to be reviewed annually by the SDCFA, and updated as necessary.

The WPO requires all Fire Departments to comply with two inter-related sets of directives: (1) compliance with applicable discharge prohibition requirements, and (2) implementation of BMPs to prevent non-stormwater discharges and to reduce contaminants in stormwater discharges. The County will generally consider failure to comply with applicable discharge prohibitions as evidence of inadequate BMPs, staff training, and/or outreach and education. Applicable discharge prohibitions and BMP requirements are further described below.

Table 5.3-25 Summary of Discharge Prohibitions and BMP Requirements

Activity Type
E.2.a.(5)(a)(i) To be treated as illicit discharges unless BMPs prevent discharge of pollutants associated with such discharges to the MS4
1. Discharges associated with fire suppression system testing or maintenance (e.g., hydrant testing, fire sprinkler testing or flushing, tank flushing)
E.2.a.(5)(a)(ii) Must be addressed by program to reduce or eliminate pollutants in such discharges from entering the MS4
1. Discharges Associated with Post-Emergency Fire Fighting Activities
2. Discharges Associated with Fire-related Field Training
E.2.a.(5)(b) County should develop and encourage implementation of BMPs to reduce or eliminate pollutants in emergency firefighting discharges to the MS4.
1. Emergency firefighting

5.3.13 Special Events Element

5.3.13.1 Background

Within the County of San Diego, a large and diverse array of temporary community events are held at a variety of venues. Special events include festivals, fairs, cultural events, parades, sporting events, charity runs, and carnivals. These events showcase unique aspects of the community or rural area, and represent one of the few opportunities when residents and businesses can come together to celebrate what makes their community special. Special events may generate significant trash and litter, and therefore, event organizers are required to implement BMPs to prevent non-stormwater and stormwater discharges.

Special events are held at a wide variety of venues throughout the County including parks, recreational facilities, parking lots, streets and highways, airports, and places of worship and community centers. Venues typically include those that are located at fixed facilities as well as remote locations.

The County's diverse events frequently have a targeted community or special interest groups. Event categories include: landscape or agricultural, aviation or automobile, antiques, cultural, holidays, arts, and environmental. Some events are held annually and draw attendees from all parts of the County and beyond. They include: the Fallbrook Avocado Festival; the Quail Botanical Garden Insect and Garden Festival; the Ramona Air Fair; the Lakeside Rodeo; and the Julian Apple Days Harvest Festival.

There are two distinguishing classifications of events: County-permitted events and events held at County facilities.

County permitted events. These events are defined as: temporary community events that occur within the County Unincorporated area; are sponsored by either a for-profit or non-profit organization; and are planned for a time period of between four hours to four days. Organizers of events which meet this criteria must obtain a permit by the appropriate permitting County department(s) depending on the activities being planned.

Events held at County facilities. These temporary community events occur at a County parks or recreational facility or on a County road that is closed for the event, such as a parade, bicycle road race, street fair, neighborhood block party, or other activity. County employees may host and sponsor special events at County facilities. Parks and other recreational facilities may be reserved for events such as corporate events, team building programs, wedding receptions, or family reunions. The County hosts various types of events for its employees for informational, educational, cultural, or celebratory reasons. Examples of events held for County employees include: employee benefits fairs; health and wellness fairs; earth day celebrations; energy conservation fairs; and department meetings.

5.3.13.2 Inventory

Temporary community events occur both regularly (e.g. monthly or annually), although some occur on a one-time only basis. Due to the fluctuating nature of special events there isn't a pre-event inventory, but a list of potential special events can be drafted based on the previous year's temporary community events. Therefore a complete inventory of temporary community events can usually only be generated post-event at the completion of the reporting period. Since events held at County facilities have onsite staff responsible for regular grounds and housekeeping, these events have continuous oversight and ongoing stormwater BMP

Jurisdictional Runoff Management Program

implementation and maintenance. Compliance is incorporated into regular facility activities and reporting, and therefore, is not reported separately from the permitted events inventory.

5.3.13.3 Activities and Pollutants

Appendix 5.11 provides a comprehensive listing of the significant pollutant generating activities (PGAs) which may be associated with Special Events, and indicates the pollutants of concern (POCs) typically associated with each. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. The pollutants most commonly associated with special events are trash and litter. Descriptions of each PGA applicable to Special Events and other municipal operations and activities are provided in Attachment 5.4. Special Events must consider all PGAs taking place at the event and must apply the BMPs appropriate for those activities.

5.3.13.4 Program Implementation

The temporary Community Events Permit (CEP) program is implemented by multiple County departments involved directly in the review of the CEP application, but is dependent on the type of activities being planned. Departments and programs include:

- Department of Environmental Health (DEH) for Food and Housing Division;
- Department of Planning and Development Services (DPDS), Zoning, Noise Abatement, and Building Inspection;
- Department of Human Resources (DHR) Risk Management Division;
- Sheriff's Department Licensing;
- Alcohol Beverage Control (ABC);
- Department of Parks and Recreation (DPR);
- Department of Public Works (DPW) for Roads;
- DPW Recycling Program;
- Animal Services; and
- San Diego County Fire Authority (SDCFA) and contract Fire Protection Districts

County Permitted Events

The County of San Diego requires event organizers to apply for a County Permit for any event meeting the definition of County Permitted events. Event organizers submit an application (available online at <http://www.sandiegocounty.gov/content/sdc/deh/fhd/food/cep.html>) that gets routed for approval from each department having jurisdiction over the various aspects of the event. The permit and guidance provided addresses numerous concerns including issues related to: animal services, food and beverage, risk management, waste management and recycling, public health and safety, and transportation. Stormwater BMPs are incorporated into the permit requirements, requiring event coordinators to comply with CEP permit conditions. There is significant coordination between County departments and external agencies such as the California Highway Patrol, State Board of Equalization, and Alcoholic Beverage Control.

Jurisdictional Runoff Management Program

The application requires the event organizer to prepare a clean-up plan, which is approved prior to issuing the permit. The development of a clean-up plan particularly addresses post-event cleanup. Recycling, composting, and waste minimization are also important targets for special events clean-up plans. County Permitted Events can occur anywhere throughout the County, therefore, event organizers are required to complete an application which includes BMP implementation during and after the event to ensure proper event set-up and clean-up. For Special Events which “are expected to generate significant trash and litter,” additional documentation detailing specific BMPs to prevent stormwater discharges may be required in the form of a recycling and waste management plan.

The current program addresses litter enforcement, waste reduction, and recycling, which all directly relate to preventing litter and trash from entering the storm drains.

Current stormwater considerations for special events include the following, when applicable:

- Provide waste hauler information contracted for solid waste cleanup;
- Increase number of trash containers and recycling bins provided for the event (as well as additional pickups by the hauler, if needed for multiple day events);
- Clean-up plan to ensure post-event cleanliness and preservation of event area;
- Designated responsibility for cleaning up after animals during and after the event;
- Portable toilet availability, maintenance and spill response;
- Fuel handling;
- Parking considerations;
- Provide equipment or utensil washing facilities for food booth operations and proper disposal of wastewater to the sanitary sewer;
- Provide a special event waste management plan which describes:
 - Garbage/trash disposal;
 - Collection of recyclables;
 - Amount recycled and disposed; and
 - Description of materials and a waste plan for recycling or disposal (e.g. cardboard, paper, beverage containers, food waste, plastics, other);
- For athletic events, water/feed areas must be established in permeable areas where possible, or the area must be cleaned immediately post event;
- Non-hazardous wastewater must drain to sanitary sewer. No wastewater may be discharged to ground or storm drains; and
- Street sweeping for cleaning up streets and gutters, as needed.

Applicable County departments review the applications for the special event permits for the issues and topics that each is responsible for. During the permit application review process, if the applicant is unable or

Jurisdictional Runoff Management Program

unwilling to comply with any of the stated requirements or if the applicant has had poor compliance history in the past, the permit application will be denied. After careful review, department staff either approves or deny the permit application.

At the conclusion of the event, if it is determined that the CEP clean-up has not been sufficiently completed, appropriate crews are dispatched to conduct the clean-up at the event organizers expense. Should the clean-up plan not be implemented as approved, the event organizer/manager may be required to provide a cash deposit or surety bond, to ensure the clean-up funding is available if needed for future events.

5.3.13.5 Best Management Practices Requirements

2013 MS4 Permit Section II.E.5.b.(1) requires the implementation, use and maintenance of pollution prevention methods via BMPs at municipal facilities and areas. These BMPs are being implemented, operated and maintained by the County on all municipal facilities and areas within its inventory of existing development within its jurisdiction. Maintenance for its BMPs follows a schedule which ensures the ongoing operation of these facilities and structures and follows intervals specific to each BMP category needed to minimize the discharge of pollutants.

Special Events must meet the applicable requirements set out in the WPO. The use of P2 practices is always encouraged, and required where applicable and feasible. Specific application of BMPs is determined on a site-by-site basis to address the specific PGAs applicable to each event. Special Event related BMP handouts are distributed to event organizers prior to obtaining a permit. Event organizers are required to complete a certification form to ensure they have a full understanding of the BMP requirements for their specific event and to acknowledge that they are fully responsible for post-event clean-up.

5.3.13.6 Inspections

The County inspects all of its existing municipal inventory in order to ensure that the 2013 MS4 Permit's requirements are being met and water quality protecting BMPs are functioning as needed and are reducing the discharge of pollutants from the MS4 and helping to eliminate non-stormwater discharges. These inspections are conducted to pay particular attention to locations with the potential to discharge pollutants prioritized by each watershed's WQIP. At a minimum, the County inspects 20 percent of its existing development inventory annually by utilizing visual inspections to determine compliance with ordinance and permit requirements as well as the condition of onsite BMPs. The data recorded during these inspections is maintained within a database used to track compliance and determine re-inspection progress where needed.

Jurisdictional Runoff Management Program

5.4 RESIDENTIAL

5.4.1 Introduction

The overall goal of this section is to establish a programmatic framework for the implementation of activities that will minimize the impact of discharges from residential areas to receiving waters and other environmental resources in the County of San Diego. Nearly half a million people live and work in the County Unincorporated area. To varying degrees, each of them can contribute to existing water quality problems and therefore plays a role in the solution.

5.4.2 Inventory

The County Unincorporated area consists of more than 3,500 square miles. While residential land use comprises less than 5 percent of this total area, this relatively small area supports an estimated population of 486,604⁴. Residential areas are thought to be a prevalent source of pollution from runoff within the County Unincorporated area. Where possible, the County tailors program implementation to the specific characteristics of individual communities and water quality priorities of their designated watersheds. In general, urban communities receive more of the County educational and compliance resources due to the higher number of residential housing units. Efforts are made to direct program activities and expenditures aimed at key water quality issues, contributing sources, and common pollutant-generating activities.

5.4.2.1 County Unincorporated Area Residential Management Areas

Provision E.5.a of the 2013 MS4 Permit requires each Copermittee to maintain and update a watershed-based inventory of the existing development within its jurisdiction that may discharge a pollutant load to and from the MS4. The County has developed a GIS-based residential inventory to track Residential Management Areas (RMAs) by hydrologic subarea. Each RMA represents a complete drainage basin. This structure is consistent with the watershed-based approach of the 2013 MS4 Permit, and with the County's water quality approach. The County has 112 hydrologic subareas; however, two of them are located within the San Juan Watershed and are under the jurisdiction of Camp Pendleton. Of the remaining 110, eight do not currently contain residential land uses at this time. As such, the County's residential inventory contains 102 RMAs at this time. The RMAs and their locations within the region's watersheds are shown in Figure 5.4-1. Figure 5.4-1 also includes the locations of known Common Interest Areas, Homeowners Association (HOAs), and Mobile Home Parks. The GIS inventory contains the applicable information for RMAs that is specified in Provisions E.5.a.2.a-i of the 2013 MS4 Permit, and is updated annually.

Jurisdictional Runoff Management Program

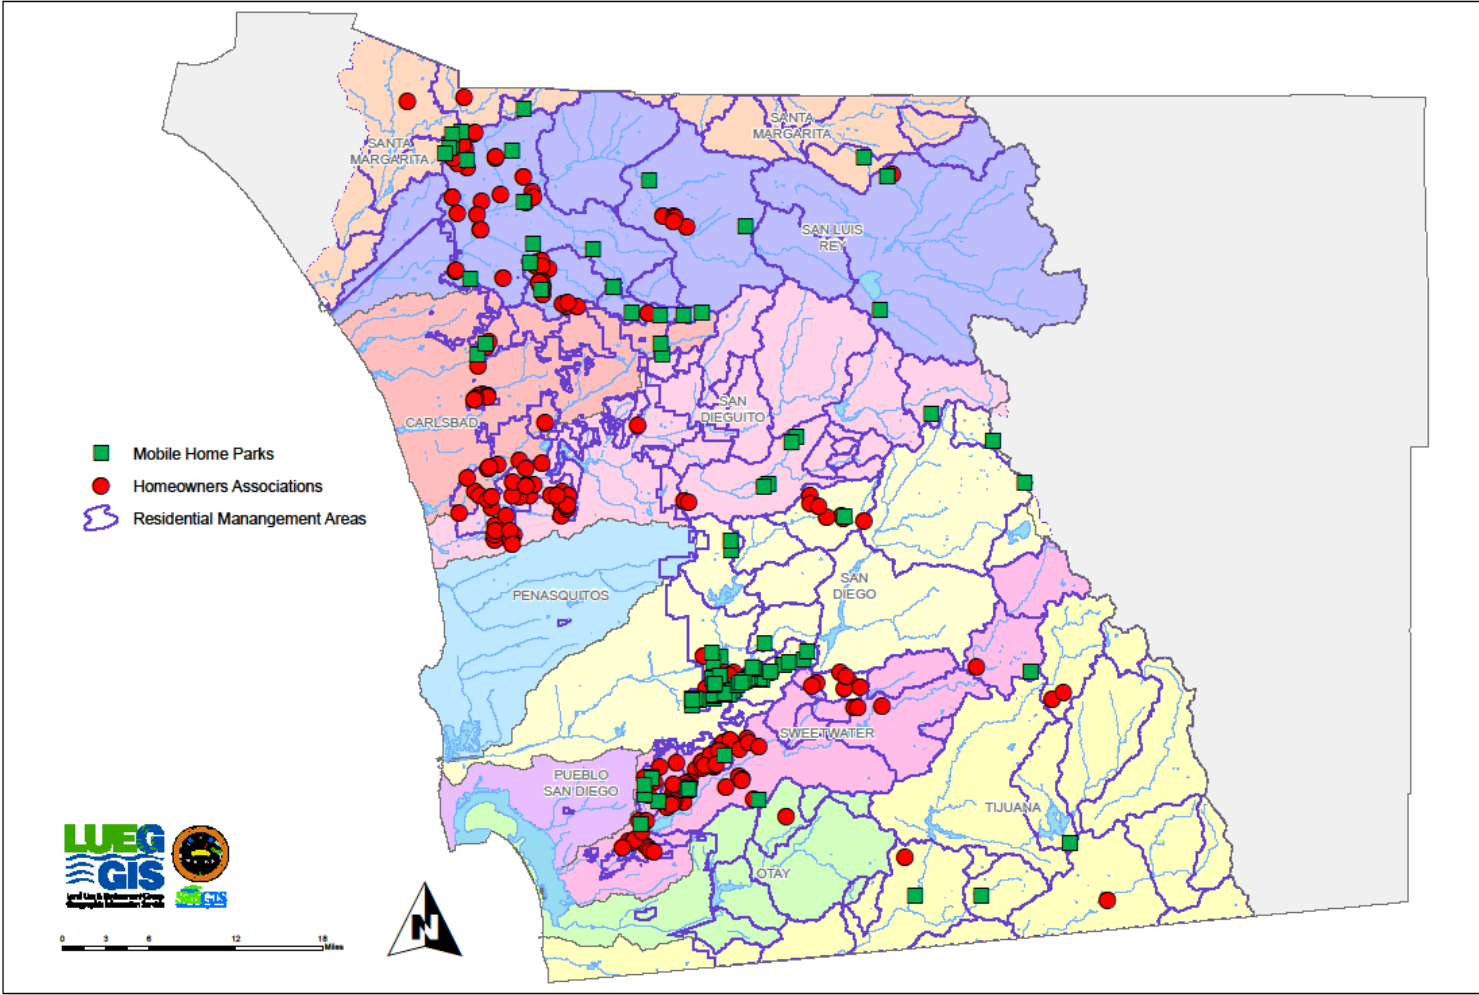

Figure 5.4-1 Location of Residential Management Areas

Jurisdictional Runoff Management Program

5.4.2.2 Residential Activities

2013 MS4 Permit Provision E.5.a.2.g requires the County to identify pollutants generated or potentially generated by RMAs. The County identified its highest priority water quality conditions (HPWQC) for each watershed with a WQIP. The County has considered the residential activities and areas within its jurisdiction and established program priorities and requirements to address the HPWQCs, in addition to other pollutants previously identified as threats to water quality under the 2007 MS4 Permit. In accordance with these pollutants, the County has established programmatic requirements which address the following types of residential activities:

- Lawn and Garden Care Activities and Product Use;
- Household and Home Care and Maintenance;
- Automobiles and Boats (parking, storage, maintenance, repair, and cleaning);
- Pet Waste Management; and
- Livestock and Large Animals Waste Management.

In addition, the County considers the following sources to be high priority:

- Any other residential source that the Copermittee determines may contribute a significant pollutant load to the MS4;
- Any residential areas tributary to a CWA section 303(d) impaired water body, where the residence generates pollutants for which the water body is impaired; and
- Any residential areas within or directly adjacent to or discharging directly to a coastal lagoon or other receiving waters within an environmentally sensitive area.

A comprehensive list of residential PGAs is presented in Table 5.4-1.

Jurisdictional Runoff Management Program

Table 5.4-1 Residential Pollutant-Generating Activities

Pollutant-Generating Activity	Description
Lawn and Garden	
Over-irrigation	Watering after rain events leads to excess run-off because the soil is too soaked to hold additional water. Using too much water leads to excess run-off, which often carries pollutants. Leaks in irrigation systems or improperly adjusted sprinklers can cause irrigation water to enter the stormwater conveyance system.
Chemical product use (fertilizers, pesticides, and herbicides)	Overuse of fertilizer, pesticide, and herbicide can cause polluted run-off. Use of spray pesticides increases the likelihood of stormwater pollution. Spraying pesticides on sidewalks or impervious surfaces allows chemicals to wash into storm drains more readily. Spraying pesticides before rain events increases the chance that they will be washed into nearby storm drains. Dumping leftover pesticides in the storm drain or conveyance system causes stormwater pollution. Improper storage and disposal of pesticides may allow them to enter storm drain.
Materials and waste storage	Storage of hazardous materials that are inappropriately contained or covered has the potential to be washed into the stormwater conveyance system.
Waste management and disposal	Improper disposal of lawn and garden materials or waste into waste receptacles may enter the stormwater conveyance system.
Household and Home	
Painting	Home painting involves hazardous materials such as paints and solvents. Improper containment, storage, cleaning of painting equipment and disposal of the wash water can contribute polluted runoff to the stormwater conveyance system.
Repair and maintenance	Home repair and maintenance projects may involve hazardous materials and waste. Improper containment, storage, cleaning of equipment and disposal of the wash water can contribute polluted runoff to the stormwater conveyance system.
Outdoor cleaning	Cleaning outdoor areas such as sidewalks, driveways, and exterior of home, as well as outdoor furniture by power washing or use of hazardous chemicals. Improper containment and disposal of the wash water can contribute polluted runoff to the stormwater conveyance system.
Pool, spa, and fountain care	Maintenance of swimming pools, spas, and ornamental water fixtures require chemical application and the discharging of polluted water and wash water. Improper disposal of wash water can contribute polluted runoff to the stormwater conveyance system.
Septic system maintenance	Proper operation and maintenance of septic systems to prevent inadequately treated domestic waste from reaching the groundwater and stormwater conveyance system.
Materials and waste storage	Storage of materials and waste that are improperly contained and have the potential to be washed into the stormwater conveyance system.
Waste management and disposal	Improper disposal of household hazardous material or waste into waste receptacles may enter the stormwater conveyance system.

Jurisdictional Runoff Management Program

Pollutant-Generating Activity	Description
Automobiles and Boats	
Parking and storage	Parking or long-term storage of vehicles can cause accumulations or discharges of grease, oils, and trash.
Maintenance and repair	Repair and maintenance performed on the street or driveway with hazardous materials that have the potential to leak or spill onto surfaces.
Washing and cleaning	Cleaning and washing can cause detergent and wash waters with pollutants to run directly into the stormwater conveyance system.
Material and waste storage	Materials and waste that are improperly contained and covered have the potential to be washed into the stormwater conveyance system.
Waste management and disposal	Improper disposal of household hazardous material or waste into waste receptacles may enter the stormwater conveyance system.
Pets	
Pet waste disposal	Pet waste left around yards, left behind during walks, or disposing of pet waste inappropriately, can contribute to pollution of the stormwater conveyance system or receiving waters when it is carried away by water from storm events or irrigation.
Pet cleaning	Pet cleaning and washing can cause detergent and wash waters with pollutants, to run directly into the stormwater conveyance system.
Livestock and Large Animals	
Manure management	Exposed manure from livestock, horses, or other large animals can contribute to pollution of the stormwater conveyance system or receiving waters when it is carried away by water from storm events or over-irrigation.
Manure disposal	Improper disposal of manure may contribute to pollution of the stormwater conveyance system or receiving waters.
Composting	Improperly locating compost areas near stormwater conveyance systems or receiving waters and not properly containing composting material may contribute pollution runoff.

Jurisdictional Runoff Management Program

5.4.3 Best Management Practice Requirements

2013 MS4 Permit Provision E.5.b.2 provides the following four BMP requirements for residential areas:

- a) Promote and encourage P2 practices;
- b) Promote and encourage BMP Implementation;
- c) Operate and maintain BMPs; and
- d) Promote and encourage Pesticide, Herbicide, and Fertilizer BMPs.

The County has established, in its WPO, minimum BMP requirements that residential dischargers must meet. The BMP requirements in the WPO fulfill the 2013 MS4 Permit requirements listed above. Residential dischargers must meet the applicable requirements set out in the WPO. Attachment 5.6 contains a detailed matrix of BMP requirements organized by pollutant-generating activity. These requirements are reviewed annually and updated as necessary. Additional information and implementation guidance can be found in the BMP Guidance Handbook.

As shown in Attachment 5.6, the use of P2 practices is promoted and encouraged wherever possible. Residents are encouraged to use P2 methods through a variety of educational programs and activities. A primary objective of the County's runoff management programs is to promote the use of these practices by residents.

Jurisdictional Runoff Management Program

5.4.4 Program Implementation

This section describes the steps that will be taken to require implementation and proper operation and maintenance of designated BMPs at residential areas in its inventoried existing development (2013 MS4 Permit Provision E.5.b.2.c), as well as inspection of residential areas (2013 MS4 Permit Provision E.5.c). These standards are required within Region 9 of the County’s jurisdiction for the activities to which they apply.

5.4.4.1 Departments and Programs

The County’s DPW WPP is the lead in implementing a residential program to reduce residential discharges of pollutants from the MS4 to the maximum extent practicable (MEP) and prevent residential discharges from the MS4 from causing or contributing to a violation of water quality standards. Additionally, the County conducts a variety of programs across multiple departments that directly or indirectly reduce pollution or prevent discharges from residential areas in the County Unincorporated area. These programs emphasize changes in knowledge and awareness necessary to effect and sustain responsible behavior. However, applicable legal authorities are also enforced as necessary. The County tailors its programs to address the unique characteristics of the many diverse unincorporated communities and land uses.

The primary programs involved in implementation of the residential stormwater-related programs are summarized in Table 5.4-3. Each program is briefly described and classified by areas of activities commonly participated in. Additionally, several other County departments, such as the County Sheriff Department or Department of Planning and Development Services, Code Compliance, have a presence in the unincorporated residential areas regularly and their activities performed assist in preventing or reducing residential discharges and stormwater pollution. Through interdepartmental communication and training, WPP receives valuable information from these departments for implementation of the residential stormwater-related programs.

Table 5.4-3 Description and General Focus of Residential Stormwater Programs

Programs	Description	Sources Addressed				
		Automobiles & Boats	Lawn & Garden	Household & Home	Pets	Livestock & Large Animals
Department of Animal Services	The County’s Animal Services provides animal-related public education, law enforcement, sheltering, medical services, and pet adoption services.				⊙	⊙
Department of Public Works Watershed	WPP is the lead in implementing a residential program to reduce residential discharges of pollutants from the MS4 to the MEP and prevent residential discharges	⊙	⊙	⊙	⊙	⊙

Jurisdictional Runoff Management Program

Programs	Description	Sources Addressed				
		Automobiles & Boats	Lawn & Garden	Household & Home	Pets	Livestock & Large Animals
Protection Program (WPP)	from the MS4 from causing or contributing to a violation of water quality standards. WPP maintains the inventory of RMAs, and conducts inspections of RMAs.					
Department of Public Works, Solid Waste Planning and Recycling (Recycling)	Recycling conducts public education, establishes recycling infrastructure, supports existing recycling operations, enforces solid waste hauler franchise agreements, operates residential composting programs contracted to the Solana Center, and reports local recycling and countywide waste disposal data.	◦	◦	◦		◦
Department of Environmental Health (DEH)	The DEH protects public health and environmental quality. It regulates public housing, small drinking water systems, mobile home parks, and onsite wastewater systems. The DEH Household Hazardous Waste (HHW) Program promotes safe household hazardous material use and disposal, and encourages the use of low-toxic substitutes.	◦	◦	◦		
Planning and Development Services (PDS) Code Compliance	PDS Code Compliance responds to requests from residents to investigate concerns and educate the public about County codes in order to gain voluntary compliance.	◦	◦	◦	◦	◦
University of California Cooperative Extension (UCCE)	The UCCE, San Diego County Extension Office promotes increased utilization of ecologically based integrated pest management programs by providing leadership, development of science-based pest management programs that are economically and environmentally sustainable and socially appropriate, and protecting human health.		◦			

5.4.4.2 Program Implementation Categories

Program implementation for residential activities is divided into two main categories: Program Planning and Administration, and Program Activities. Detailed sub-categories and programs - involved with the implementation are displayed in Table 5.4-4 below.

Jurisdictional Runoff Management Program

Table 5.4-4 Residential Stormwater Program Implementation Roles

Complaints & Enforcement		◉		◉	◉	

5.4.4.2.1 Program Planning and Administration

The County’s WPP is the lead in implementing a residential program to reduce residential discharges of pollutants contributing to violations of water quality standards. Source characterizations and priorities are assessed to maintain 2013 MS4 Permit compliance with current and relevant data and information. BMP requirements are reviewed to ensure that recommended or required practices are correctly targeted to the pollutant-generating activities identified for all priority sources. Furthermore, implementation strategies and tools are analyzed to ensure that activities and requirements are properly targeted, and necessary modifications are made in response to ongoing implementation experience, effectiveness assessment, and other available information. All program planning and administration activities are reviewed at least annually.

The WPP is responsible for reporting all requirements in accordance with Section F of the 2013 MS4 Permit in the JRMP Annual Report. In collaboration with other programs, WPP compiles data to report in the JRMP Annual Report.

5.4.4.2.2 Program Activities

Inspections of Residential Areas

The County has structured its residential inspection program in compliance with 2013 MS4 Permit Provision E.5.c. Inspections are conducted as drive-by inspections by County staff, with onsite inspections as necessary. Every RMA will be inspected at least once every five years. Inspections, where possible, are drainage-based, and areas with major outfalls with known persistent flow are prioritized.

Jurisdictional Runoff Management Program

The inspections are education and outreach based, with targeted educational material distributed at residences in response to observations (e.g., promoting proper irrigation practices, trash containment). In addition, the County is targeting outreach material towards common residential pollutant-generating activities. The County is working to establish relationships with HOAs, Mobile Home Parks, and Common Interest Areas and is developing outreach material specific to these sources.

Outreach and Education

Outreach is a central tenant of the residential stormwater program implementation strategy. Various types of outreach are used to bring about changes in knowledge or awareness in target populations. All residential programs use a wide variety of activities to reach residents throughout the year. Examples of consistently utilized outreach activities include material distribution, workshops, trainings, seminars, community and special events, news releases, and material displays (billboards, signs, kiosks, movie theatre slides, etc.). Specific program outreach and education activities are discussed in Sections 7 and 8 of the JRMP.

Waste Collection and Recycling

A variety of waste collection and recycling services are used to assist residents and businesses in properly disposing of wastes. The County is responsible for these services in the County Unincorporated area and holds numerous events throughout the year.

Recycling has curbside collection services, drop-off recycling centers, oil recycling services, tire recycling services and compost, yard waste, and animal waste management. In addition, Recycling holds specific one-day recycling events such as free composting workshops and tire recycling day.

The Household Hazardous Waste program supports waste collection from unincorporated residents at facilities located in Chula Vista, El Cajon, Miramar, and Ramona. Like recycling, one-day collection events are held and take place in residential areas such as local high schools, churches, and road stations.

Complaint Investigations

Complaint investigations are used to gather data and information as a response to reports of potential violations, through complaints received from the Stormwater Hotline, online or from staff referrals. Investigations typically consist of observations, record reviews, and sampling as needed. All reported incidents of pollution originating from residential areas will be investigated and resolved. The lead for the investigations of residential stormwater complaints is the WPP. The WPP collaborates with other departments and agencies as necessary to address stormwater issues. The Illicit Discharge Detection and Elimination program is described in Section 6 of the JRMP.

Compliance and Enforcement

Jurisdictional Runoff Management Program

The objectives of the County's residential enforcement program are to educate the community, promote compliance with applicable ordinances, and return violators to compliance. Although education is emphasized as the primary means of achieving compliance, the County has established the necessary authority and programs to investigate and enforce all potential stormwater violations. The County may take necessary enforcement actions as described in the Enforcement Response Plan to obtain compliance from residential dischargers.

Jurisdictional Runoff Management Program

5.5 RETROFIT AND REHABILITATION

5.5.1 Background

2013 MS4 Permit Section E.5.e requires the County to develop programs to retrofit areas of existing development, and to rehabilitate streams, channels, and habitats. In addition to removing pollutant loads, these programs are intended to support the protection of downstream channels, reductions in flooding, and restoration of beneficial uses and natural hydrology. The primary focus of both program elements is to address HPWQCs identified in the WQIPs for each WMA, but it is expected that other water quality benefits will also be realized through their implementation. The County's approach to complying with its retrofit and rehabilitation program requirements is described below.

5.5.2 Identification of Candidate Areas of Existing Development

Prior to the identification of specific projects or project types, areas of existing development will be evaluated for their potential to contribute or mitigate pollutants or stressors that contribute to the HPWQCs identified in each WQIP. Candidate areas that support other implementation objectives (reductions in dry weather flows, mitigation of hydromodification impacts, targeted pollutant reductions, etc.) will also be identified and considered.

The selection and prioritization of candidate areas will reflect a variety of considerations such as the following:

- Identified WQIP priorities;
- Available monitoring results (wet and dry);
- Applicable regulatory drivers (TMDLs, 303(d) listings, etc.);
- Drainage area characteristics (existing or projected land uses, zoning, topography, drainage patterns, perviousness, vegetation, etc.);
- Source attributes (type, frequency, distribution, threat to water quality, etc.); and
- Opportunities for structural and non-structural interventions.

5.5.3 Identification of Candidate Projects

Following the identification of priority areas of existing development, candidate retrofit and rehabilitation projects will also be identified.

5.5.3.1 Development of Candidate Project Lists

Candidate project lists will form the basis for project identification and selection. These lists will be developed from a variety of sources as appropriate and available (e.g., public calls, GIS mapping, mitigation banks, project applicants, and reviews of existing documents such as Comprehensive Load Reduction Plans [CLRPs], Park Master Plans, Trails Management Plans,

Jurisdictional Runoff Management Program

and the County Multiple Species Conservation Program [MSCP]). Candidate projects may be identified individually or categorically. The selection and prioritization of projects will reflect a variety of considerations such as:

- Expected efficacy (pollutant or flow reductions, etc.);
- Community support (e.g., access, safety, and aesthetics);
- Potential for multiple benefits (pollutant or volume reduction, groundwater recharge, recreational use, education, etc.);
- Lifecycle costs (e.g., for acquisition, design, construction, maintenance, monitoring, and regulatory oversight), cost-effectiveness, and return on investment; and
- Potential funding opportunities (grants, foundations, program funding, etc.);

Project lists will be periodically reviewed and updated as new data and information become available.

5.5.3.2 Retrofit Projects

The primary purposes of implementing retrofit projects are to reduce pollutants or mitigate stormwater flows and durations from areas of existing development. Examples of potential project types include:

- Regional BMPs (e.g., detention, retention, wetland systems, or infiltration systems);
- Medium-scale distributed BMP retrofits (e.g., parking lot retrofits at businesses);
- Retrofits of existing infrastructure (e.g., LID conversions, inlet filters, green streets, or dry weather flow diversions);
- Groundwater recharge projects and infiltration systems;
- Water supply augmentation projects (e.g., capture and use of water, cisterns, and stormwater vaults); and
- Small-scale retrofits of residential properties (e.g., rain barrels, smart irrigation systems, turf replacement, and downspout redirects).

5.5.3.3 Stream, Channel, and Habitat Rehabilitation Projects

The primary purposes of implementing stream, channel, and habitat rehabilitation projects are to mitigate stormwater flows and durations from areas of existing development, rehabilitate channelized or hydromodified streams, restore wetland and riparian habitat, restore watershed functions, and restore beneficial uses of receiving waters. Examples of potential rehabilitation project types include:

- Restoration of streams and creeks;
- Restoration of wetland, riparian, and upland habitat;
- Acquisition, restoration, and preservation of open space;

Jurisdictional Runoff Management Program

- Invasive species removal; and
- Restoration and stabilization of channels.

5.5.4 Development of Strategies to Facilitate the Implementation of Identified Candidate Projects

The lead for the development and management of these program elements will reside with the DPW WPP. However, they will be implemented across multiple departments including DPW, DGS, and DPR. At a minimum, facilitation strategies will identify specific program functions, roles, and responsibilities that include the following:

- Identification, evaluation, and prioritization of candidate projects;
- Selection of projects for implementation;
- Project design and engineering;
- Coordination with regulatory agencies;
- Outreach and coordination with stakeholders and project partners;
- Acquisition and management of project funding;
- Monitoring and assessment of project and program effectiveness; and
- Regulatory reporting.

The detailed strategies needed to facilitate the implementation of priority candidate projects will ultimately depend on the results of the project selection and prioritization processes described above. These strategies will likely encompass a number of potential implementation pathways such as the following:

- County-funded projects;
- Agency-funded projects (e.g., through grants);
- Privately-funded projects (e.g., parking lot retrofits by businesses);
- Public-private partnerships (e.g., regional treatment controls);
- Compliance programs (e.g., through progressive enforcement);
- Incentive programs (e.g., rain barrel rebates);
- Voluntary initiatives (e.g., through education programs); and
- Offsite alternative compliance projects (to be considered only if the County elects to implement an Alternative Compliance Program).

Jurisdictional Runoff Management Program

In all cases, the implementation or construction of projects will be subject to the availability of funding or other equivalent means of requiring or incentivizing project completion. The County will continue to seek grants and other sources of funding to implement these program elements.

Attachment 5.1 – Industrial, Commercial, Municipal Source Profiles

Attachment 5.1 - Commercial, Industrial, and Municipal Source Profiles

1. **Automobile Repair, Maintenance, Fueling, and Cleaning**
2. **Airplane and Boat Repair, Maintenance, Fueling and Cleaning**
3. **Equipment Repair, Maintenance, Fueling, and Cleaning**
4. **Vehicle Body Repair and Painting**
5. **Parking Lots and Storage Facilities**
6. **Retail and Wholesale Fueling**
7. **Eating and Drinking Establishments**
8. **Pest Control Services**
9. **Nurseries and Greenhouses**
10. **Cemeteries**
11. **Golf Courses**
12. **Parks and Other Recreational Facilities**
13. **Equine Facilities**
14. **Pet-related Facilities**
15. **Building Material Retailers and Storage**
16. **Marinas**
17. **Municipal Development**

1. Automobile Repair, Maintenance, Fueling, and Cleaning

Applicable SIC Codes

4173 – Bus Terminals and Service Facilities
4231 – Terminal and Joint Terminal Maintenance Facilities for Motor Freight Transportation
7533 – Automotive Exhaust System Repair Shops
7534 – Tire Re-treading and Repair Shops
7537 – Automotive Transmission Repair Shops
7538 – General Automotive Repair Shops
7539 – Automotive Repair Shops, NEC
7549 – Automotive Services (wrecking, undercoating, rust proofing, lubrication)

Description

This category includes establishments engaged in the repair, maintenance, fueling and cleaning of automobiles or similar vehicles. General operations at these facilities consist of repairing engines, transmissions, suspensions, and other mechanical components of the vehicle not generally associated with the body or interior. Additional operations include the removal and replacement of vehicle fluids including fuel and the cleaning of automotive parts and equipment. This category includes but is not limited to service stations, auto mechanics, tire repair and replacement, lube and oil service facilities.

Table 5.1.1 lists the Pollutant-generating Activities potentially associated with automobile repair, maintenance, fueling and cleaning, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.1 – Pollutant-generating Activities and Associated Pollutants of Concern for Automobile Repair, Maintenance, Fueling, and Cleaning

Priority PGA (◆)	PGA Reference Number (see Attachment 5.2)	Pollutant-generating Activity (PGA)	Potential Pollutants-of-Concern (POCs)							
			Sediment	Nutrients	Trash	Metals	Bacteria	Oil & Grease	Organics	Pesticides

2. Airplane and Boat Repair, Maintenance, Fueling and Cleaning

Applicable SIC Codes

4581 – Airports, Flying Fields, and Services (Aircraft Servicing, Maintenance and Cleaning)
 3731 – Ship Building and Repairing
 3732 – Boat Building and Repairing

Description

This category includes establishments primarily engaged in operating and maintaining airports and flying fields; in servicing, repairing (except on a factory basis), maintaining, and storing aircraft; and in furnishing coordinated handling services. Operations at these facilities generally consist of mechanical maintenance of the airplane, which may include engine repair, hydraulic repair, fluid removal/replacement and for this category could include body and interior components that are mechanical in nature.

It also includes establishments primarily engaged in the repair, maintenance fueling and cleaning of ships, barges, boats and lighters. Operations include boat and ship repairs not conducted in marinas, which usually consist mechanical maintenance of ships, boats etc., which may include engine repair, driveline repair, fluid removal/replacement and for this category could include body and interior components that are mechanical in nature.

Table 5.1.2 lists the Pollutant-generating Activities potentially associated with airplane and boat repair, maintenance, fueling, and cleaning, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.2 – Pollutant-generating Activities and Associated Pollutants of Concern for Airplane and Boat Repair, Maintenance, Fueling, and Cleaning

Priority PGA (◆)	PGA Reference Number (see Attachment 5.2)	Pollutant-generating Activity (PGA)	Potential Pollutants-of-Concern (POCs)

3. Equipment Repair, Maintenance, Fueling, and Cleaning

Applicable SIC Codes

7519 – Utility Trailer Rentals
7353 – Heavy Construction Equipment Rentals
7359 – Equipment Rental
7623 – Refrigeration Services and Repair (Refrigerator, HVAC, etc.)
7692 – Welding Repair
7699 – Equipment Repair
7623 – Refrigeration Service and Repair
7699 (Repair Shops and Related Services, Not Else Classified)

Description

Establishments primarily engaged in the repair, maintenance, fueling and cleaning of equipment. Operations generally include engine repair, driveline repair, fuel system maintenance and repair, fluid removal/replacement and degreasing of components and parts.

Table 5.1.3 lists the Pollutant-generating Activities potentially associated with equipment repair, maintenance, fueling and cleaning, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.3 – Pollutant-generating Activities and Associated Pollutants of Concern for Equipment Repair, Maintenance, Fueling and Cleaning

Priority PGA (◆)	PGA Reference Number (see Attachment 5.2)	Pollutant-generating Activity (PGA)	Potential Pollutants-of-Concern (POCs)

4. Vehicle Body Repair and Painting

Applicable SIC Codes

7532 – Top & body repair & paint shops

7536 – Automotive Glass Replacement Shops

7549 – Automotive Services (wrecking, undercoating, rust proofing, lubrication)

Description

Establishments primarily engaged in the repair of automotive tops, bodies, and interiors, or automotive painting and refinishing. Operations at these facilities generally include exterior, interior and frame repair of vehicles, which may include windshield removal/replacement, metal parts fabrication, and removing and replacing fluids to gain access to areas requiring repair.

Table 5.1.4 lists the Pollutant-generating Activities potentially associated vehicle body repair and painting, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.4 – Pollutant-generating Activities and Associated Pollutants of Concern for Vehicle Body Repair and Painting

Priority PGA (◆)	PGA Reference Number (see Attachment 5.2)	Pollutant-generating Activity (PGA)	Potential Pollutants-of-Concern (POCs)

5. Parking Lots and Storage Facilities

Applicable SIC Codes

4225 – General Warehousing and Storage

4226 – Special Warehousing and Storage, Not Elsewhere Classified

7521 – Automotive Parking

Description

Establishments provide storage and parking facilities for short term and long term automotive storage. Operations at these facilities generally consist of supplying a location for cars to be securely stored or parked, which may include preparing cars for long term storage by removing fluids parts or generally moth balling the vehicle.

Table 5.1.5 lists the Pollutant-generating Activities potentially associated with parking lots and storage facilities, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.5 – Pollutant-generating Activities and Associated Pollutants of Concern for Parking Lots and Storage Facilities

Priority PGA (◆)	PGA Reference Number (see Attachment 5.2)	Pollutant-generating Activity (PGA)	Potential Pollutants-of-Concern (POCs)

6. Retail and Wholesale Fueling

Applicable SIC Codes

5541 – Gasoline Service Stations

5172 – Petroleum and Petroleum Products Wholesalers, Except Bulk Stations and Terminals

Description

Establishments primarily engaged in selling fuels and lubricants for motor vehicles. Operations could include key card services and retail establishments that provide petroleum, ethanol, and other vehicle fueling as well as lubricant products.

Table 5.1.6 lists the Pollutant-generating Activities potentially associated with retail and wholesale fueling, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.6 – Pollutant-generating Activities and Associated Pollutants of Concern for Retail and Wholesale Fueling

7. Eating and Drinking Establishments

Applicable SIC Codes

5141 – Groceries, General Line
5149 – Groceries and related Products, Not Elsewhere Classified
5411 – Grocery Stores
5421 – Meat and Fish (Seafood) Markets, Including Freezer Provisioners
5499 – Miscellaneous Food Stores
5812 – Eating Places
5813 – Drinking Places (Alcoholic Beverages)
5999 – Miscellaneous Retail Stores, Not Elsewhere Classified

Description

Establishments primarily engaged in providing prepared or processed foods and beverages to the public. Operations usually including baking, frying, roasting and general preparation of food and the sell and distribution of processed beverages.

The County Department of Environmental Health Food and Housing Division (FHD) currently conducts inspections of food service Countywide. There are 18 cities within the County with more than 12,000 retail food facilities, including over 6,000 restaurants. In order to safeguard public health and to the environment most of these facilities are inspected an average of four times a year. Thus, any person operating a retail food facility (including vending vehicles or a catering business) is required by law to apply for and obtain a valid public health permit.

An eating and drinking establishment means an “operation that stores, prepares packages, serves, vends, or otherwise provides human consumption at the retail level.” Overall, this category includes: restaurants, cafeterias, groceries stores, bakeries, delicatessens or all facility requiring a Health Department permit for food preparation. (COSD Food and Housing).

Table 5.1.7 lists the Pollutant-generating Activities potentially associated with eating and drinking establishments, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.7 – Pollutant-generating Activities and Associated Pollutants of Concern for Food Service Facilities

8. Pest Control Services

Applicable SIC Codes

7342 – Disinfecting and Pest Control Services

0721—Crop Protection

0762—Farm Management Services

0782—Lawn & Garden Services

Description

This category includes establishments primarily engaged in providing pesticide application services. Pest control services conduct mixing and application of pesticides (herbicides, fungicides, or insecticides) using sprays, dusts, vapors, baits, or soil incorporation on trees, shrubs, lawns, botanical crops, or structures. Conducting pest control requires specific training and State or Federal certification to ensure a proper delivery of chemicals into the surrounding environment.

Table 5.1.8 lists the Pollutant-generating Activities potentially associated with pesticide application activities and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.8 – Pollutant-generating Activities and Associated Pollutants of Concern for Pest Control Services

Priority PGA (◆)	PGA Reference Number (see Attachment 5.2)	Pollutant-generating Activity (PGA)	Potential Pollutants-of-Concern (POCs)

9. Nurseries and Greenhouses

Applicable SIC Codes

0181 (Ornamental Floriculture and Nursery Products)

8422 (Botanical or Zoological Gardens)

Description

This category includes establishments that have collections of a wide variety of plants or animals for public display or categorized and documented for scientific purposes. The Department of Agriculture, Weights and Measures (AWM) regulates these facilities. Currently there are no botanical gardens in the AWM current inventory.

This category includes establishments primarily engaged in growing plants to offer for sale for planting, propagation, or ornamentation. Operations generally include the cutting, trimming and arrangement of plants and other ornamentals for sale to the public.

Table 5.1.9 lists the Pollutant-generating Activities potentially associated with Nurseries, Greenhouses, and Botanical Gardens, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.9 – Pollutant-generating Activities and Associated Pollutants of Concern for Nurseries and Greenhouses

10. Cemeteries

Applicable SIC Codes

6553 – Cemetery Subdividers and Developers

0782 – Law and Garden Services

0783 – Ornamental Shrub and Tree Services

Description

This category includes establishments specifically designated areas set aside to bury the deceased. Operations that generally occur may include mowing, trimming, planting, watering, fertilizing, digging, raking, and sprinkler installation. Landscape activities are conducted to improve the appearance, health, and value of the cemetery scenery. The Department of Agriculture, Weights and Measures (AWM) regulates these facilities.

Table 5.1.10 lists the Pollutant-generating Activities potentially associated with cemetery activities and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.10 – Pollutant-generating Activities and Associated Pollutants of Concern for Cemeteries

Priority PGA (◆)	PGA Reference Number (see Attachment 5.2)	Pollutant-generating Activity (PGA)	Potential Pollutants-of-Concern (POCs)

11. Golf Courses

Applicable SIC Codes

7992 (Public Golf Courses)

7997 (Membership Sports and Recreation Clubs)

Description

This category includes public and private golf and country clubs. Operations at these facilities generally consist of mowing, trimming, planting, watering, fertilizing, digging, raking, sprinkler installation and the general upkeep of water bodies used as ornamental landscaping. AWM currently conducts inspections to evaluate compliance within stormwater regulations.

Table 5.1.11 lists the Pollutant-generating Activities potentially associated with golf courses activities and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.11 – Pollutant-generating Activities and Associated Pollutants of Concern for Golf Courses

Priority PGA (◆)	PGA Reference Number (see Attachment 5.2)	Pollutant-generating Activity (PGA)	Potential Pollutants-of-Concern (POCs)

12. Parks and Other Recreational Facilities

Applicable SIC Codes

7997 (Membership Sports and Recreation Clubs)

Description

This category includes establishments that specifically correspond to a bounded area of land, usually in its natural or semi-natural (landscaped) state, that was set aside for a sport or a recreational purpose for a fairly large group of people. The most prevalent recreational facility in the County other than golf courses are paint ball fields. Paint balling is a sport in which participants use liquid-paint that is captured within spherical gelatin capsules containing primarily non-toxic water-soluble substances and dyes. DPW currently conducts parks and other recreational facility inspections to evaluate compliance within stormwater regulations.

Table 5.1.12 lists the Pollutant-generating Activities potentially associated with recreational parks, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.12 – Pollutant-generating Activities and Associated Pollutants of Concern for Parks and Other Recreational Facilities

Priority PGA (◆)	PGA Reference Number (see Attachment 5.2)	Pollutant-generating Activity (PGA)	Potential Pollutants-of-Concern (POCs)							
			Sediment	Nutrients	Trash	Metals	Bacteria	Oil & Grease	Organics	Pesticides

13. Equine Facilities

Applicable SIC Codes

0272 (Horses and other Equines)

0279 (Animal Specialties, Not Elsewhere Classified)

0291 (General Farms, Primarily Livestock and Animal Specialties)

0752 (Animal Specialty Services, Except Veterinary)

7948 (Services-Racing, Including Track Operation)

7999 (Amusement and Recreation Services, Not Else Classified)

Description

This category includes establishments primarily engaged in selling, transferring, adopting, breeding, boarding, training, grooming, sheltering, or rescuing pets, livestock, or large animals.

This category includes establishments primarily engaged in the operation of riding, training, breeding, boarding, or driving horses; it includes both use of horses for practical, working purposes as well as recreational activities and competitive sports. This category does not include veterinary services.

Table 5.1.13 lists the Pollutant-generating Activities potentially associated with equestrian activities and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.13 – Pollutant-generating Activities and Associated Pollutants of Concern for Equine Facilities

14. Pet-related Facilities

<u>Applicable SIC Codes</u>

0752 (Animal Specialty Services, Except Veterinary)

Description

This category includes establishments primarily engaged in pet grooming and washing, housing or refuge. Pet Grooming operations generally consist of washing and trimming of animals. Animal kennels are structures such as cages, gates, buildings or yards that house large amounts of cats or dogs and could include pet motels and dog training centers. Operations generally occurring at kennels include animal feeding, washing, clipping and disposal of animal waste.

Table 5.1.14 lists the Pollutant-generating Activities potentially associated with pet-related activities and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.14 – Pollutant-generating Activities and Associated Pollutants of Concern for Pet-related facilities

15. Building Material Retailers and Storage

Applicable SIC Codes

5031 – Wholesale Lumber, Plywood, Millwork & Wood panels

5039 – Construction Materials

Description

Retailers

This category includes establishments primarily engaged in the sale of general line of building materials. Materials may include but are not limited to lumber, flooring, molding, doors, sashes, frames, other millwork, roofing materials, stone, masonry materials, insulation, paint, brick, tile, cement, sand, and gravel.

Storage

This category includes businesses that store or house building materials and supplies short term or for extended periods of time before they are delivered to a buyer.

Table 5.1.15 lists the Pollutant-generating Activities potentially associated with retailers and storage facilities, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.15 – Pollutant-generating Activities and Associated Pollutants of Concern for Building Material Retailers and Storage

16. Marinas

Applicable SIC Codes

4493 – Marinas

Description

This category includes establishments primarily engaged in the repair, maintenance, and cleaning of ships and boats. Operations may include engine repair, driveline repair, fluid removal/replacement and for this category could include body and interior components that are mechanical in nature. The marina may also have re-fueling, washing and repair facilities, may offer out-of-water-storage, and may include ground facilities such as parking lots for vehicles and boat trailers.

Table 5.1.16 lists the Pollutant-generating Activities potentially associated with marinas, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs associated with individual facilities vary depending on their actual uses and operations, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.1.16 – Pollutant-generating Activities and Associated Pollutants of Concern for Marinas

**Attachment 5.2 – Industrial, Commercial, Municipal Best Management Practice
Requirements**

Attachment 5.2 – BMP Requirements for Specific Industrial, Commercial and Municipal Sources, Including Proposed Revision to the Watershed Protection Ordinance

- A. Key Definitions**
- B. Watershed Protection Ordinance (WPO) Excerpts Applicable to Industrial, Commercial and Municipal Sources**
- C. BMP Requirements for Specific Industrial, Commercial and Municipal Pollutant-generating Activities (PGAs)**

A. Key Definitions

Best management practices” (BMPs) shall have the same meaning as defined in the NPDES Order. Best management practices may include any type of pollution prevention and pollution control measure that achieves compliance with this Chapter.

“Discharge”, when used as a verb, means to allow pollutants to directly or indirectly enter stormwater, or to allow stormwater or non-stormwater to directly or indirectly enter the stormwater conveyance system or receiving waters, from an activity or operations which one owns or operates. When used as a noun, "discharge" means the pollutants, stormwater or non-stormwater that are discharged.

“Discharger” means any person or entity engaged in activities or operations or owning facilities, from which an allowed non-stormwater discharge to the stormwater conveyance system may or does originate or which will or may result in pollutants entering stormwater, the stormwater conveyance system, or receiving waters or the owners of real property on which such activities, operations or facilities are located, except that a local government or public authority is not a discharger as to activities conducted by others in public rights-of-way.

“Environmentally sensitive area” or “ESA” means impaired water bodies, as defined by the federal Clean Water Act, Section 303(d), areas designated as Areas of Special Biological Significance or with the RARE beneficial use by the SWRCB in the Water Quality Control Plan for the San Diego Basin (1994 and amendments) and areas designated as preserves for species- protection purposes by the State of California or a local government.

“Feasible” means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, and technological factors as determined in the sole discretion of the County. Feasibility may be limited in this Chapter to eliminate consideration of economic, environmental and other factors as, for example, where feasibility is specifically defined as technological feasibility.

“Illicit connection” means any man-made conveyance or drainage system through which non-stormwater or pollutants in water, not authorized by an NPDES permit or the NPDES Order are discharged or may be discharged to the stormwater conveyance system.

“Maximum extent practicable” (MEP) shall have the same meaning as defined in the NPDES Order.

“Non-Stormwater” means all discharges to and from the stormwater conveyance system that do not originate from precipitation.

“Pollutant” means any agent that may cause, potentially cause or contribute to the degradation of water quality such that a condition of pollution or contamination is created or aggravated.

“Pollution prevention” means the practices and processes that reduce or eliminate the generation of pollutants such as the use of smaller quantities of toxic materials or substitution of less toxic materials; changes to production processes to reduce waste; decreases in waste

water flows; recycling of wastes as part of the production process; segregation of wastes, and treatment of wastes on site to decrease volume or toxicity.

“Receiving waters” shall mean waters of the United States.

“Stormwater conveyance system” means private and public drainage facilities other than sanitary sewers within the unincorporated area of San Diego County by which water run-off may be conveyed to receiving waters, and includes but is not limited to roads, streets, constructed channels, aqueducts, storm drains, pipes, street gutters, inlets to storm drains or pipes, or catch basins.

“Stormwater Quality Management Plan” means a plan, submitted on a County form or in a County approved format with an application for a County permit or other County approval, identifying the measures that will be used for stormwater and non-stormwater management for a development project. There are two types of SWQMPs: a Standard SWQMP and a PDP SWQMP. A PDP SWQMP is required for all Priority Development Projects west of the Pacific/Salton Divide. Standard SWQMPs are required for all development projects east of the Pacific/Salton Divide and for all projects west of the Pacific/Salton Divide that are not Priority Development Projects.

“Stormwater pollution prevention plan” (SWPPP) means an approved site-specific plan that (1) identifies and evaluates sources of pollutants associated with activities that may affect the quality of stormwater discharges, (2) eliminates non-stormwater discharges, and (3) identifies and implements site-specific BMPs to reduce or to prevent pollutants in stormwater or retain non-stormwater discharges.

“Tributary to an impaired water body” means any facility or activity that is a tributary to an impaired water body because urban run-off from that facility or activity enters (1) the stormwater conveyance system at a place and in a manner that will carry pollutants for which that water body is impaired to the impaired water body; (2) a flowing stream that will carry pollutants for which that water body is impaired to the impaired water body; or (3) an ephemeral stream that reaches the impaired water body during storm events and that will carry pollutants for which that water body is impaired during such storm events.

“Water quality standards” mean those regionally determined beneficial uses and water quality objectives in applicable water quality control and basin plans, together with anti-degradation policies that serve as water quality standards under the Clean Water Act.

B. Watershed Protection Ordinance (WPO) Excerpts Applicable to Industrial, Commercial and Municipal Sources

Key sections of the Watershed Protection Ordinance (WPO) with applicability to Industrial, Commercial and Municipal Dischargers are provided below. The WPO is provided in its entirety in Attachment 2.2.

SEC. 67.804. DISCHARGE PROHIBITIONS.

(a) It is unlawful for any person to discharge or cause the discharge of pollutants or non-stormwater directly or indirectly into the stormwater conveyance system or receiving waters, except as set forth in Section 67.805 or as otherwise authorized by law.

(b) It is unlawful for any person to construct, use or maintain a connection to the stormwater conveyance system that discharges any matter other than stormwater, except as set forth in Section 67.805(a). This Section expressly supersedes any previously issued permit or authorization granted by the County and expressly prohibits any previously legal non-conforming connection.

(c) It is unlawful to throw, deposit, leave, abandon, maintain, or keep materials or wastes on public or private lands in a manner and place where they may result in a discharge.

(d) Stormwater discharges from the site may not contain sediments in amounts in excess of the sediments that would have been discharged from the site in an undisturbed condition.

SEC. 67.805. EXEMPTIONS FROM DISCHARGE PROHIBITIONS.

The following are exempt from the prohibitions in Section 67.804:

(a) Any discharge or connection regulated under a valid facility-specific NPDES permit or non-stormwater discharges exempted pursuant to Section II.E.2. of the NPDES Order, provided that the discharge or connection is in compliance with all relevant permit conditions and the requirements of the NPDES Order to the satisfaction of the County or Regional Water Quality Control Board.

(b) Discharges of non-stormwater to the stormwater conveyance system covered by NPDES Permit No. CAG919001 (Order No. R9-2007-0034, or subsequent order) for discharges to San Diego Bay, or NPDES Permit No. CAG919002 (Order No. R9-2008-0002, or subsequent order) for discharges to surface waters other than San Diego Bay meeting the requirements enumerated below are allowed unless determined by the County or RWQCB to be a source of pollutants to receiving waters:

(1) Uncontaminated pumped ground water;

(2) Discharges from foundation drains if the system is designed to be located at or below the groundwater table to actively or passively extract groundwater during any part of the year;

(3) Water from crawl space pumps; and

(4) Water from footing drains if the system is designed to be located at or below the groundwater table to actively or passively extract groundwater during any part of the year.

(c) Non-stormwater discharges from water line flushing and water main breaks to the stormwater conveyance system are allowed provided the discharge is covered by NPDES Permit No. CAG679001 (Order No. R9-2010-003, or subsequent order) unless determined by the County or RWQCB to be a source of pollutants to receiving waters. This exemption does not cover discharges from recycled or reclaimed water lines unless covered by a separate NPDES permit.

(d) Discharges of non-stormwater to the stormwater conveyance system meeting the requirements enumerated below are allowed unless determined by the County or RWQCB to be a source of pollutants to receiving waters:

- (1) Diverted stream flows;
- (2) Rising ground waters;
- (3) Uncontaminated ground water infiltration to stormwater conveyance system;
- (4) Springs;
- (5) Flows from riparian habitats and wetlands;
- (6) Discharges from potable water sources;

(7) Discharges from foundation drains where the system is designed to be located above the groundwater table at all times of the year, and the system is only expected to discharge non-stormwater under unusual circumstances; and

(8) Discharges from footing drains where the system is designed to be located above the groundwater table at all times of the year, and the system is only expected to discharge non-stormwater under unusual circumstances.

(e) Discharges of non-stormwater to the stormwater conveyance system as enumerated below are allowed unless determined by the County or RWQCB to be a source of pollutants to receiving waters:

- (1) Air conditioning condensation
 - (A) Whenever feasible, the discharge of air conditioning condensation shall be directed to landscaped areas, pervious surfaces, or to the sanitary sewer.
- (2) Individual residential vehicle washing at a residence in accordance with Section 67.807(b)

(A) Whenever feasible, the discharge of wash water shall be directed to landscaped areas or other pervious surfaces; and

(B) The amount of water, washing detergent and other vehicle wash products used shall be the minimum amount necessary to completely wash the vehicle. This requirement shall be deemed violated if visible soap scum, oil sheen, or other by-products of residential vehicle washing reach the gutter or other drainage conveyance device in front of the residence where the vehicle is being washed.

(3) Dechlorinated swimming pool discharges

(A) Residual chlorine from swimming pools and fountains must be eliminated prior to discharging to the stormwater conveyance system or receiving waters;

(B) Filter backwash, acid-wash water (pH <7.2 and > 8.0), and algaecide-treated pool water shall be prohibited from discharge to the stormwater conveyance system or receiving water; and

(C) The discharge of saline swimming pool water must be directed to the sanitary sewer, landscaped areas, or other pervious surfaces that can accommodate the volume of water, unless the saline swimming pool water can be discharged via a pipe or concrete channel directly to a naturally saline water body (e.g. Pacific Ocean).

(f) Firefighting discharges to the stormwater conveyance system are only prohibited if determined to be a significant source of pollutants to receiving waters by the County or RWQCB. Firefighting discharges to the stormwater conveyance system not identified as a significant source of pollutants to receiving waters are allowed provided they meet the following requirements:

(1) Non-emergency firefighting discharges

(A) Building fire suppression system maintenance discharges (e.g. sprinkler line flushing) to the stormwater conveyance system are prohibited unless BMPs are implemented to prevent pollutants associated with such discharges from entering the stormwater conveyance system.

(B) Non-emergency firefighting discharges (i.e., discharges from controlled or practice blazes, firefighting training, and maintenance activities not associated with building fire suppression systems) must be addressed by a program developed and implemented by the County, to reduce or eliminate pollutants in such discharges from entering the stormwater conveyance system.

(2) Emergency firefighting discharges

(A) The development and implementation of BMPs to reduce or eliminate pollutants in emergency firefighting discharges to the stormwater conveyance system and receiving waters is encouraged, but not required. Notwithstanding the foregoing, the County may require the use of BMPs for firefighting discharges when determined by the authorized enforcement official to be necessary to eliminate or reduce the discharge of pollutants to the stormwater conveyance system or receiving waters. As applicable, required BMPs may include those described in Sections 67.806 and 67.808. Any BMPs that interfere with immediate emergency response operations or impact public health and safety need not be used.

(g) In the event that any non-stormwater discharge identified in Section 67.805 (a) through (f) is determined to be a source of pollutants to receiving waters, it may only be allowed to continue within an applicable Watershed Management Area if controls set forth by the County in the corresponding Water Quality Improvement Plan are implemented to the satisfaction of the RWQCB.

(h) Discharges exempted from compliance by operation or law; any permits, orders or decisions issued by the RWQCB; and any waivers, or renewals of waivers issued by the RWQCB such as those covered by Regional Board Order No. R9-2014-0041, adopted June 26, 2014.

SEC. 67.806. GENERAL BEST MANAGEMENT PRACTICE REQUIREMENTS.

The following requirements apply to all dischargers:

(a) All dischargers must perform and maintain the following BMPs:

(1) Prior to the rainy season, remove or secure any significant accumulations of eroded soils from slopes previously disturbed by landscaping, clearing or grading, if those eroded soils could otherwise enter and impact the stormwater conveyance system or receiving waters during the rainy season.

(2) Implement, as practicable, those stormwater pollution prevention practices that are generally recognized in that discharger's industry or business as being effective and economically advantageous.

(3) Eliminate illicit connections.

(4) Protect from erosion those slopes that have been disturbed by clearing, grading, or landscaping and are more than three feet in height or steeper than 3:1 (run-to-rise). Slope protection shall occur prior to the first rainy season following the clearing, grading or landscaping of the slope and continuously thereafter.

(5) Store all materials and wastes with the potential to pollute stormwater in a manner that prevents contact with rainfall, run-on, run-off and wind dispersal.

(6) Locate, configure, and manage stockpiles of soil, green waste and compost to prevent the release of materials to the stormwater conveyance system or receiving waters.

(7) Use all materials with the potential to pollute run-off, such as outdoor cleaning and maintenance products, fertilizers, pesticides and herbicides in accordance with label directions. No such product may be disposed of or rinsed into receiving waters or the stormwater conveyance system.

(8) Use dry methods such as sweeping, vacuuming, raking, and application of absorbents to cleanup pollutants, unless wet cleanup methods are otherwise allowed in this Chapter.

(b) BMPs shall be maintained to function as intended and designed. BMPs which fail shall be repaired or replaced as soon as it is safe or practicable. If BMPs fail notwithstanding their intent or design, the BMPs shall be modified or upgraded to prevent any further failure in the same or similar circumstances.

(c) Notwithstanding the provisions of this Chapter, an authorized enforcement official may require a discharger to prepare and submit a Stormwater Pollution Prevention Plan (SWPPP) for approval by the authorized enforcement official as follows:

(1) If the discharger fails to comply with any applicable requirement of this Chapter after one or more written notifications or other enforcement actions have been taken because BMPs have been determined to be inadequate or are not being adequately maintained.

(2) The activity at issue is considered a significant source of pollutants or a source of a non-stormwater discharge in excess of what is allowed by this Chapter to the stormwater conveyance system or receiving waters. Any discharger required to submit and to obtain approval of a SWPPP shall install, implement and maintain the BMPs specified in the approved SWPPP.

(3) The SWPPP shall identify the BMPs or corrective measures that will be used by the discharger to prevent or control pollution of stormwater to the MEP and bring the non-stormwater discharge into conformance with the requirements of this Chapter. If a facility discharges non-stormwater to ground water, the facility shall obtain an RWQCB permit as required by the State Water Code, and shall describe the requirements of that permit in the SWPPP.

(d) Notification of Spills, Releases and Illegal Discharges.

(1) Spills, releases, or discharges of pollutants or non-stormwater in excess of what is allowed by this Chapter to receiving waters or to the stormwater conveyance system shall be reported by the discharger as required by all applicable state and federal laws.

(2) Any such spills, releases or discharges with the potential to endanger health, safety or the environment shall be reported to the Director, Department of Public Works, within 24 hours after discovery of the spill, release or discharge. Spills that have been completely contained and cleaned up on-site are not considered significant unless they pose a threat to human health or safety.

(3) If safe to do so, necessary actions shall be taken to contain and minimize the spill, release or discharge of any pollutants to the MEP and bring any allowed discharge of non-stormwater into compliance with this Chapter.

(e) Sampling, Testing, Monitoring, and Reporting.

(1) Dischargers shall perform the sampling, testing, monitoring and reporting required by this Chapter.

(2) An authorized enforcement official may order a discharger to conduct testing or monitoring and to report the results to the County if one or more of the following occurs:

(A) The authorized enforcement official determines that testing or monitoring is needed to determine whether BMPs are effectively preventing or reducing pollution in stormwater to the MEP or necessary to allow for the continued discharge of non-stormwater under the limited circumstances permitted by this Chapter.

(B) Testing or monitoring is needed to determine whether the facility is a significant source of pollutants or of otherwise prohibited non-stormwater discharges to receiving waters or the stormwater conveyance system.

(C) The authorized enforcement official determines that testing or monitoring is needed to assess the impacts of a discharge on the public's health, safety or the environment.

(D) A discharge has not been eliminated after written notice by an authorized enforcement official.

(E) The RWQCB requires the County to provide any information related to the discharger's activities.

(3) Sampling, testing or monitoring ordered pursuant to this Section may include one or more of the following:

(A) Visual monitoring of dry weather flows, wet weather erosion, discharge points or conditions of BMPs.

(B) Visual monitoring of premises for spills or discharges.

(C) Laboratory analyses of discharges for pollutants.

(D) Background or baseline monitoring or analysis.

(E) Monitoring of receiving waters or sediments that may be affected by pollutant discharges by the discharger or by a group of dischargers including the discharger.

(4) The authorized enforcement official may direct the manner in which the results of required testing and monitoring are reported, and may determine that sampling, testing or monitoring may discontinue.

SEC. 67.808. ADDITIONAL MINIMUM BEST MANAGEMENT AND POLLUTION PREVENTION PRACTICES FOR INDUSTRIAL, COMMERCIAL AND MUNICIPAL FACILITIES AND ACTIVITIES.

The following requirements apply to all industrial, commercial and municipal facilities and activities:

(a) The owner or operator shall install and maintain BMPs and implement a pollution prevention program appropriate to the activity, as specified in the following areas and manner:

(1) Stormwater BMP training

(A) Provide stormwater BMP training at least annually to all operators, employees, and workers with responsibility for activities that could result in unauthorized discharges of pollution or non-stormwater.

(B) Training shall address the pollution and non-stormwater generating activities conducted at the facility, the pollutants or risk of non-stormwater discharge associated with those activities, and the BMPs or pollution prevention practices used to minimize or eliminate the discharge of non-stormwater and pollutants.

(C) The following BMP categories shall be included in training ,where applicable:

- i. Preventive maintenance.
- ii. Good housekeeping.
- iii. Proper waste disposal.
- iv. Non-stormwater disposal alternatives.
- v. Equipment/vehicle maintenance and repair.
- vi. Spill response, containment, and recovery.
- vii. Recycling, re-use, and volume reduction in materials, water consumption and wastes.
- viii. BMP maintenance.

(2) Where required to implement a SWPPP, retain on site a copy of a current, complete, site-specific SWPPP and make it available for review by the authorized enforcement official, upon request.

(3) Review the operations and procedures relating to protecting the stormwater conveyance system and receiving waters from pollutants and prohibited, non-stormwater discharges at least annually.

(4) Implement pollution prevention methods or those stormwater pollution prevention practices that are generally recognized in that discharger's industry or business to eliminate or reduce pollutants in run-off to the MEP and eliminate the discharge of non-stormwater in an amount or manner beyond what is allowed by this Chapter.

(5) Housekeeping.

(A) The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed, transported and disposed of in accordance with this Chapter.

(B) Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters.

(6) Liquid waste management

(A) Wet clean-up or cleaning methods such as hosing, steaming or pressure washing are prohibited except where adequate precautions have been taken to prevent the discharge of wash water and pollutants into the stormwater conveyance system or receiving waters.

(B) Disposal of slurries to the stormwater conveyance system or receiving waters is prohibited.

(C) Rinse water shall be confined to a designated area such as a sanitary sewer, dead-end sump, process treatment system, or hole where water percolates or evaporates and solids are removed for collection and disposal. Rinse water and solids shall be re-used, recycled, or disposed of in accordance with this Chapter.

(D) Wash water shall be directed to an approved sanitary sewer or landscaped locations.

(E) Wash racks.

- i. Wash rack areas shall have perimeter control and be properly sloped to a grated floor drain.
 - ii. Wash rack areas shall drain to the sanitary sewer or to a holding tank, except that wash racks for animals may drain to the ground in accordance with this Chapter.
- (F) Disposal of wastewater to the stormwater conveyance system, receiving waters, or the ground, is prohibited.
- (G) If provided, pump-out services for boats, portable toilets, or other holding tanks shall be conducted in a manner that prevents the release of sewage to the stormwater conveyance system or receiving waters.
- (H) Wastewater shall be disposed to the sanitary sewer at the job site or to a holding tank. Disposal of wastewater contained in holding tanks shall be disposed of to the sanitary sewer at the business's company headquarters or at an approved facility.
- (I) Discharging backwash wastewater to the stormwater conveyance system or receiving waters is prohibited. Backwash wastewater may be disposed to the sanitary sewer; to a holding tank or settling pond; or where allowed by this Chapter, by infiltration to the soil.
- (J) Under the limited circumstances allowed by this Chapter, pool and spa water intended for discharge to the stormwater conveyance system shall be dechlorinated or debrominated prior to discharge.
- (K) Under the limited circumstances allowed by this Chapter, pool and spa water discharged after acid washing shall be neutralized to a pH of 7.2 - 8.0.
- (L) If rinse water from the cleaning of portable sanitary toilet closets cannot be properly disposed of to the sanitary sewer at a job site, it shall be contained prior to disposal at the service facility or other approved facility.
- (M) Wash and rinse water from building and pavement washing that cannot be properly disposed of at the job site shall be collected and contained for recycling, reuse, or proper disposal.
- (N) Where irrigation tail-water return ponds are used, the ponds shall be designed with the appropriate vertical separation between the base of the pond and the seasonal high groundwater mark and must be lined or managed to prevent the movement of water-soluble chemicals to the groundwater and to stormwater flows.
- (7) Materials and waste management.
 - (A) Spill prevention and response.

- i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible.
- ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use.
- iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.

(B) Hazardous materials and hazardous wastes.

- i. Hazardous materials and wastes shall be stored, managed, and disposed in accordance with applicable federal, state and local laws and regulations.
- ii. Hazardous materials and wastes shall be stored above the ground. Where practicable, provide overhead coverage for all outside hazardous materials or waste storage areas. If overhead coverage is not available, stored materials shall be covered with an impervious material such as a tarp or other similar method.
- iii. Paints, coatings, thinners, and other materials shall be disposed of in accordance with this Chapter.
- iv. Secondary containment of hazardous materials or waste shall be provided around storage areas if the authorized enforcement official has determined that a significant potential exists to discharge materials or wastes to the stormwater conveyance system or receiving waters.
- v. Hazardous waste storage areas shall be inspected by the owner or operator, at least once prior to the rainy season and monthly during the rainy season.
- vi. Pesticides and other chemical products shall be used, stored, and disposed of in accordance with applicable federal, state, and local laws and regulations.
- vii. The outdoor application of fertilizers and pesticides is prohibited during rainfall.
- viii. Pesticide use shall be reduced whenever practical in areas where recurring applications of pesticides are performed.

(C) Solid, non-hazardous materials and waste.

- i. Trash storage and disposal areas shall be kept clean and free of debris.

ii. Dumpsters, grease bins, grease traps, and interceptors, and other containers shall be maintained in a clean and leak -proof condition and shall be kept securely closed when not in use.

iii. Materials and equipment necessary for the clean-up of trash and debris shall be maintained and kept readily accessible.

iv. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry clean-up methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this Chapter.

v. All areas where livestock, horses or other large animals are confined shall be bermed or curbed in a manner that avoids a discharge of manure to the stormwater conveyance system or receiving water. If berms or curbs are not practicable, manure shall be cleaned up at least twice weekly and must be composted or properly stored prior to disposal.

vi. Wastes from small animals (e.g., dogs and cats) shall be cleaned up and properly disposed of at least weekly.

(D) Loading and unloading.

i. Storm drain inlets located within or down-gradient of loading or unloading areas shall be covered or otherwise protected during loading and unloading activities to prevent the entry of pollutants and prohibited non-stormwater discharges into the stormwater conveyance system or receiving waters.

ii. Equipment and supplies stored in loading and unloading areas shall be properly maintained to prevent leaks and spills to the stormwater conveyance system or receiving waters, and to prevent their contact with rainfall and run-on.

(E) Storage.

i. Outdoor storage areas of materials and equipment shall be configured using berms, dikes, or other diversion structures or other measures that elevate stored materials and equipment from site surfaces.

ii. Containers shall be kept in a leak-proof condition, securely closed when not in use, and stored in a manner that protects them from contact with precipitation or surface waters.

iii. Storage of cement and masonry materials shall be above ground and covered.

iv. Placement of stock piles within any drainage system is prohibited.

v. Stockpiles and bulk materials, such as soil, fertilizer, and potting mixture shall be covered during windy and rainy conditions where practicable. Prior to the onset of predicted rain, stockpiles shall be covered and bermed to prevent contact with stormwater.

(8) Vehicles and equipment.

(A) All vehicles and equipment shall be properly maintained and inspected to ensure their proper functioning to prevent discharges.

(B) Vehicles and equipment shall not be washed in areas where wash water or rinse water will drain to the stormwater conveyance system or receiving waters.

(C) Infiltration of wash or rinse water to pervious surfaces is allowed with a minimum of 10 feet separation between the groundwater and the pervious surface, except that wash or rinse water generated from cleaning engines, mechanical parts, or heavy equipment shall not infiltrate a pervious surface.

(D) The use of hose-off or single-use engine degreasing chemicals is prohibited, unless captured and properly disposed.

(E) Maintenance and repair equipment shall be kept clean to avoid the build-up of grease and oil.

(F) Fluids shall be drained from any retired vehicles or equipment stored on site.

(G) Vehicle and equipment maintenance and repair work such as body work shall be conducted indoors or under cover, where practicable. If work cannot be conducted indoors or under cover, other BMPs shall be implemented to prevent the discharge of pollutants into the stormwater conveyance system or receiving waters. Discharge of non-stormwater to the stormwater conveyance system is prohibited.

(H) Major repair and maintenance work on boats over or in the water is prohibited. Touch-up painting, tune ups, or other similar activities are not considered major repair or maintenance work, but may only be conducted over or in the water if adequate precautions have been taken to prevent the entry of pollutants into the water.

(9) Outdoor areas - housekeeping and grounds keeping practices.

(A) Storm drain inlets located within or down gradient of the activity shall be covered or otherwise protected from the entry of pollutants and non-stormwater during the work activity.

(B) Landscaping, grounds keeping and agriculture unless exempt pursuant to Section 67.805(h).

i. Exposed slopes shall be stabilized as soon as possible.

ii. Paved surfaces such as sidewalks shall be cleaned regularly using dry clean-up methods such as sweeping or vacuuming. Hosing is permissible only after surfaces have previously been cleaned using dry methods, and only if precautions have been taken to prevent the discharge of run-off to the storm drain.

iii. Business, industrial and municipal facilities owners and their contractors shall clean-up and properly dispose of spills from any pesticides, herbicides and fertilizers to non-porous surfaces. These materials shall be stored in closed, labeled containers, such as in covered areas, off the ground, or under protective tarps, and in a manner that will not lead to a discharge. Disposal of pesticides, herbicides and fertilizers to the stormwater conveyance system and receiving waters is prohibited.

(C) Parking lots and vehicle storage areas.

i. Wet clean-up methods may only be used where adequate precautions have been taken to prevent the entry of wash water and pollutants into the stormwater conveyance system or receiving waters.

ii. Vehicle maintenance and repair operations with the potential to release non-stormwater or pollutants are prohibited at commercial parking lots and storage facilities.

(D) Rooftops.

i. Materials which may contaminate stormwater shall not be stored on rooftops unless adequate precautions have been taken to prevent their contact with stormwater.

ii. Equipment such as emergency generators, HVAC systems and other similar items located on rooftops shall be inspected and preventive maintenance conducted to prevent leaks and spills.

iii. Substances such as bird droppings, grease, leaves, that have accumulated on rooftops shall be removed, as practicable, to prevent or reduce the discharge of contaminants directly or indirectly to the stormwater conveyance system or receiving waters.

iv. Where feasible, roof downspouts shall be routed away from work areas and toward pervious areas such as lawns, except where required under Sections 67.810 and 67.811.

(b) Other requirements.

(1) Any commercial, industrial, or municipal facility or activity operating under the statewide Industrial General Permit shall provide the following documents for on-site review by the authorized enforcement official as applicable, and if requested:

- (A) The Notice of Intent letter or a Waste Discharge Identification Number issued by the SWRCB.
- (B) A SWPPP satisfying the requirements of the Industrial General Permit.
- (C) A monitoring program satisfying the requirements of the Industrial General Permit.
- (D) Training records satisfying the requirements of the Industrial General Permit.

(2) Any discharger whose facilities or activities are not in compliance with this Chapter, or any discharger or category of dischargers determined to pose a significant threat to water quality, may be required to implement additional controls as determined by the authorized enforcement official. The authorized enforcement official may require dischargers to maintain, on site, written documentation of these additional requirements, and to provide such documentation upon request.

C. BMP Requirements for Specific Industrial, Commercial and Municipal Pollutant-generating Activities (PGAs)

Table 5.2.1 – Required Best Management Practices (BMPs) by Pollutant-generating Activity

Category A: Management of Materials and Wastes	
A.1 MATERIALS MANAGEMENT AND STORAGE	
A.1.a Materials Loading and Unloading	<p><u>WPO Section 67.808(a)(6)(A) – Use dry clean-up methods</u></p> <ul style="list-style-type: none"> i. Use dry methods such as sweeping, vacuuming, raking, and application of absorbents to cleanup Pollutants, unless wet cleanup methods are otherwise allowed in this Chapter. <p><u>WPO Section 67.808(a)(7)(A) – Spill prevention and response</u></p> <ul style="list-style-type: none"> i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible. ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use. iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations. <p><u>WPO Section 67.808(a)(7)(D) -- Loading and unloading</u></p> <ul style="list-style-type: none"> i. Storm drain inlets located within or down-gradient of loading or unloading areas shall be covered or otherwise protected during loading and unloading activities to prevent the entry of pollutants into the stormwater conveyance system or receiving waters. ii. Equipment and supplies stored in loading and unloading areas shall be properly maintained to prevent leaks and spills to the stormwater conveyance system or receiving waters, and to prevent their contact with rainfall and run-on.
A.1.b Storage of Materials A.1.c Liquid Container Storage	<p><u>WPO Section 67.806(a) – General BMP Requirements</u></p> <ul style="list-style-type: none"> (5) Store all materials and wastes with the potential to pollute stormwater in a manner that either prevents contact with rainfall and runoff from storm flows or contains contaminated runoff for treatment and disposal. (6) Locate, configure, and manage stockpiles of soil, green waste and compost to prevent the release of materials to the stormwater conveyance system or receiving waters. <p><u>WPO Section 67.808(a)(7)(A) – Spill prevention and response</u></p> <ul style="list-style-type: none"> i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible. ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use. iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations. <p><u>WPO Section 67.808(a)(7)(B) – Hazardous materials and hazardous wastes</u></p> <ul style="list-style-type: none"> i. Hazardous materials and wastes shall be stored, managed, and disposed in accordance with applicable federal, state and local laws and regulations. ii. Hazardous materials and wastes shall be stored above the ground. Where practicable, provide overhead coverage for all outside hazardous materials or waste storage areas. If overhead coverage is not available, stored materials shall be covered with an impervious material such as a tarp or other similar method. iv. Secondary containment of hazardous waste shall be provided around storage areas from which a significant potential exists to discharge materials or wastes to the stormwater conveyance system or receiving waters. v. Hazardous waste storage areas shall be inspected by the owner or operator, at least once prior to the rainy season and monthly during the rainy season. vi. Pesticides and other chemical products shall be used, stored, and disposed of in accordance with applicable federal, state, and local laws and regulations.

	<p><u>WPO Section 67.808(a)(7)(E) -- Storage</u></p> <ul style="list-style-type: none"> i. Outdoor storage areas of materials and equipment shall be configured using berms, dikes, or other diversion structures or other measures that elevate stored materials and equipment from site surfaces. ii. Containers shall be kept in a leak-proof condition, securely closed when not in use, and stored in a manner that protects them from contact with stormwater. iii. Storage of cement and masonry materials shall be above ground and covered. iv. Placement of stock piles within any drainage system is prohibited. v. Stockpiles and bulk materials, such as soil, fertilizer, and potting mixture shall be covered during windy and rainy conditions where practicable. Prior to the onset of predicted rain, stockpiles shall be covered and bermed to prevent contact with stormwater. <p><u>WPO Section 67.808(a)(9)(D) – Rooftops</u></p> <ul style="list-style-type: none"> i. Materials which may contaminate stormwater shall not be stored on rooftops unless adequate precautions have been taken to prevent their contact with stormwater.
--	--

A.2 WASTE HANDLING AND STORAGE

<p>A.2.a Hazardous Waste</p>	<p><u>WPO Section 67.808(a)(7)(A) – Spill prevention and response</u></p> <ul style="list-style-type: none"> i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible. ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use. iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations. <p><u>WPO Section 67.808(a)(7)(B) -- Hazardous materials and hazardous wastes</u></p> <ul style="list-style-type: none"> i. Hazardous materials and wastes shall be stored, managed, and disposed in accordance with applicable federal, state and local laws and regulations. ii. Hazardous materials and wastes shall be stored above the ground. Where practicable, provide overhead coverage for all outside hazardous materials or waste storage areas. If overhead coverage is not available, stored materials shall be covered with an impervious material such as a tarp or other similar method. iii. Paints, coatings, thinners, and other materials shall be disposed of in accordance with this chapter. iv. Secondary containment of hazardous waste shall be provided around storage areas from which a significant potential exists to discharge materials or wastes to the stormwater conveyance system or receiving waters. v. Hazardous waste storage areas shall be inspected by the owner or operator, at least once prior to the rainy season and monthly during the rainy season. vi. Pesticides and other chemical products shall be used, stored, and disposed of in accordance with applicable federal, state, and local laws and regulations. vii. The outdoor application of fertilizers and pesticides is prohibited during rainfall. viii. Pesticide use shall be reduced to the MEP in areas where recurring applications of pesticides are performed.
-------------------------------------	---

<p>A.2.b Solid Waste</p> <p>A.2.c Food Grease And Oil</p>	<p><u>WPO Section 67.808(a)(7)(A) – Spill prevention and response</u></p> <ul style="list-style-type: none"> i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible. ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use. iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations. <p><u>WPO Section 67.808(a)(8) (C) -- Solid, non-hazardous waste</u></p> <ul style="list-style-type: none"> i. Trash storage and disposal areas shall be kept clean and free of debris. ii. Dumpsters, grease bins, and other containers shall be maintained in a clean and leak proof condition and shall be kept securely closed when not in use. iii. Materials and equipment necessary for the clean-up of trash and debris shall be maintained and kept readily accessible. iv. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry cleanup methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this chapter. <p><u>WPO Section 67.808(a)(7)(E) – Storage</u></p> <ul style="list-style-type: none"> i. Outdoor storage areas of materials and equipment shall be configured using berms, dikes, or other diversion structures or other measures that elevate stored materials and equipment from site surfaces. ii. Containers shall be kept in a leak-proof condition, securely closed when not in use, and stored in a manner that protects them from contact with stormwater.
<p>A.2.d Pet Waste / Manure</p>	<p><u>WPO Section 67.808(a)(7) (C) -- Solid, non-hazardous waste</u></p> <ul style="list-style-type: none"> i. Trash storage and disposal areas shall be kept clean and free of debris. ii. Dumpsters, grease bins, and other containers shall be maintained in a clean and leak proof condition and shall be kept securely closed when not in use. iii. Materials and equipment necessary for the clean-up of trash and debris shall be maintained and kept readily accessible. v. All areas where livestock, horses or other large animals are confined shall be bermed or curbed in a manner that avoids a discharge to the stormwater conveyance system or receiving water. If berms or curbs are not practicable, manure shall be cleaned up at least twice weekly and must be composted or properly stored prior to disposal. <p><u>WPO Section 67.808(a)(7)(E) – Storage</u></p> <ul style="list-style-type: none"> ii. Containers shall be kept in a leak-proof condition, securely closed when not in use, and stored in a manner that protects them from contact with stormwater. iv. Placement of stock piles within any drainage system is prohibited. v. Stockpiles and bulk materials, such as soil, fertilizer, and potting mixture shall be covered during windy and rainy conditions where practicable. Prior to the onset of predicted rain, stockpiles shall be covered and bermed to prevent contact with stormwater.

A.2.e Liquid Waste
A.2.f Sanitary Wastes

WPO Section 67.808(a)(6) -- Liquid waste management

- B. Disposal of slurries to the stormwater conveyance system or receiving waters is prohibited.
- C. Rinse water shall be confined to a designated area such as a sanitary sewer, dead-end sump, process treatment system, or hole where water percolates or evaporates and solids are removed for collection and disposal. Rinse water and solids shall be re-used, recycled, or disposed of in accordance with this chapter.
- D. Wash water shall be directed to an approved sanitary sewer or landscaped locations.
- E. Wash racks.
 - i. Wash rack areas shall have perimeter control and be properly sloped to a grated floor drain.
 - ii. Wash rack areas shall drain to the sanitary sewer or to a holding tank.
- F. Disposal of wastewater to the stormwater conveyance system, receiving waters, or the ground, is prohibited.
- G. If provided, pump-out services for boats, portable toilets, or other holding tanks shall be conducted in a manner that prevents the release of sewage to the stormwater conveyance system or receiving waters.
- H. Wastewater shall be disposed to the sanitary sewer at the job site or to a holding tank. Disposal of wastewater contained in holding tanks shall be disposed of to the sanitary sewer at the business's company headquarters or at an approved location.
- I. Discharging backwash wastewater to the stormwater conveyance system or receiving waters is prohibited. Backwash wastewater may be disposed to the sanitary sewer; to a holding tank or settling pond; or where allowed by this chapter, by infiltration to the soil.
- J. Pool, spa, and fountain water intended for discharge to the stormwater conveyance system shall contain a concentration of zero ppm chlorine or bromine prior to discharge.
- K. Pool, spa, and fountain water discharged after acid washing shall be neutralized to a pH of 7.2 - 8.0.
- L. If rinse water from the cleaning of portable sanitary toilet closets cannot be properly disposed of to the sanitary sewer at a job site, it shall be contained prior to disposal at the service facility or other approved facility.
- M. Wash and rinse water from building and pavement washing that cannot be properly disposed of at the job site shall be collected and contained for recycling, reuse, or proper disposal.
- N. Where irrigation tail-water return ponds are used, the ponds shall be designed with the appropriate vertical separation between the base of the pond and the seasonal high groundwater mark and must be lined or managed to prevent the movement of water-soluble chemicals to the groundwater and to stormwater flows.

WPO Section 67.808(a)(7)(A) – Spill prevention and response

- i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible.
- ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use.
- iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.

WPO Section 67.808(a)(7)(E) – Storage

- ii. Containers shall be kept in a leak-proof condition, securely closed when not in use, and stored in a manner that protects them from contact with stormwater.

<p>A.2.g Green Waste</p>	<p><u>WPO Section 67.806(a) – General BMP Requirement</u> (6) Locate, configure, and manage stockpiles of soil, green waste and compost to prevent the release of materials to the stormwater conveyance system or receiving waters.</p> <p><u>WPO Section 67.808(a)(7) (C) -- Solid, non-hazardous waste</u></p> <ul style="list-style-type: none"> i. Trash storage and disposal areas shall be kept clean and free of debris. ii. Dumpsters, grease bins, and other containers shall be maintained in a clean and leak proof condition and shall be kept securely closed when not in use. iii. Materials and equipment necessary for the clean-up of trash and debris shall be maintained and kept readily accessible. iv. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry cleanup methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this chapter. <p><u>WPO Section 67.808(a)(7)(E) – Storage</u></p> <ul style="list-style-type: none"> ii. Containers shall be kept in a leak-proof condition, securely closed when not in use, and stored in a manner that protects them from contact with stormwater.
<p>A.2.h Recyclables / Reusables</p>	<p><u>WPO Section 67.808(a)(6) -- Liquid waste management</u></p> <ul style="list-style-type: none"> M. Wash and rinse water from building and pavement washing that cannot be properly disposed of at the job site shall be collected and contained for recycling, reuse, or proper disposal. <p><u>WPO Section 67.808(a)(7)(A) – Spill prevention and response</u></p> <ul style="list-style-type: none"> iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations. <p><u>WPO Section 67.808(a)(7)(E) – Storage</u></p> <ul style="list-style-type: none"> ii. Containers shall be kept in a leak-proof condition, securely closed when not in use, and stored in a manner that protects them from contact with stormwater.

Category B: Vehicle and Equipment Activities

B.1 VEHICLE AND EQUIPMENT STORAGE

B.1.a Outdoor Vehicle Storage

B.1.b Outdoor Equipment and Parts Storage

WPO Section 67.808(a)(7)(D) -- Loading and Unloading

- i. Equipment and supplies stored in loading and unloading areas shall be properly maintained to prevent leaks and spills to the stormwater conveyance system or receiving waters, and to prevent their contact with rainfall and run-on.

WPO Section 67.808(a)(7)(E) -- Storage

- i. Outdoor storage areas of materials and equipment shall be configured using berms, dikes, or other diversion structures or other measures that elevate stored materials and equipment from site surfaces.

WPO Section 67.808(a)(8) -- Vehicles and equipment

- (F) Fluids shall be drained from any retired vehicles or equipment stored on site.

WPO Section 67.808(a)(9)(C) -- Parking lots and vehicle storage areas

- i. Wet clean-up methods may only be used where adequate precautions have been taken to prevent the entry of wash water and other contaminants into the stormwater conveyance system or receiving waters.
- ii. Vehicle maintenance and repair operations with the potential to release pollutants are prohibited at commercial parking lots and storage facilities.

WPO Section 67.808(a)(9)(D) -- Rooftops

Equipment such as emergency generators, HVAC systems and other similar items located on rooftops shall be inspected and preventive maintenance conducted to prevent leaks and spills.

B.2 VEHICLE AND EQUIPMENT REPAIR, MAINTENANCE, AND SERVICE

<p>B.2.a Vehicle and Equipment Repair</p> <p>B.2.b Changing Vehicle Fluids</p> <p>B.2.c Vehicle and Equipment Fueling</p>	<p><u>WPO Section 67.808(a)(5) – Housekeeping.</u></p> <ul style="list-style-type: none"> A. The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter. B. Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters. <p><u>WPO Section 67.808(a)(7)(A) – Spill prevention and response</u></p> <ul style="list-style-type: none"> i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible. ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use. iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations. <p><u>WPO Section 67.808(a)(8) -- Vehicles and Equipment</u></p> <ul style="list-style-type: none"> A. All vehicles and equipment shall be properly maintained and inspected to ensure their proper functioning. D. The use of hose-off or single-use engine degreasing chemicals is prohibited, unless captured and properly disposed. E. Maintenance and repair equipment shall be kept clean to avoid the build up of grease and oil. F. Fluids shall be drained from any retired vehicles or equipment stored on site. G. Vehicle and equipment maintenance and repair work such as body work shall be conducted indoors or under cover, where practicable. If work cannot be conducted indoors or under cover, other BMPs shall be implemented to prevent the discharge of pollutants into the stormwater conveyance system or receiving waters. H. Major repair and maintenance work on boats over or in the water is prohibited. Touch-up painting, tune ups, or other similar activities are not considered major repair or maintenance work, but may only be conducted over or in the water if adequate precautions have been taken to prevent the entry of pollutants into the water. <p><u>WPO Section 67.808(a)(9) -- Outdoor areas--housekeeping and grounds keeping practices.</u></p> <ul style="list-style-type: none"> C. Parking lots and vehicle storage areas. <ul style="list-style-type: none"> ii. Vehicle maintenance and repair operations with the potential to release pollutants are prohibited at commercial parking lots and storage facilities. <p><u>WPO Section 67.808(a)(7)(B) -- Hazardous materials and hazardous wastes</u></p> <ul style="list-style-type: none"> i. Hazardous materials and wastes shall be stored, managed, and disposed in accordance with applicable federal, state and local laws and regulations.
<p>B.2.d Vehicle Washing</p> <p>B.2.e Equipment Cleaning</p>	<p><u>WPO Section 67.808(a)(8) -- Vehicles and Equipment</u></p> <ul style="list-style-type: none"> (B) Vehicles and equipment shall not be washed in areas where wash water or rinse water will drain to the stormwater conveyance system or receiving waters. (C) Infiltration of wash or rinse water to pervious surfaces is allowed with a minimum of 10 feet separation between the groundwater and the pervious surface, except that wash or rinse water generated from cleaning engines, mechanical parts, or heavy equipment shall not infiltrate a pervious surface. (D) The use of hose-off or single-use engine degreasing chemicals is prohibited, unless captured and properly disposed. (E) Maintenance and repair equipment shall be kept clean to avoid the build up of grease and oil.

Category C: Outdoor Area Maintenance

C.1 BUILDING AND GROUNDS MAINTENANCE

C.1.a Parking Areas	<p><u>WPO Section 67.808(a)(9)(C) -- Parking lots and vehicle storage areas</u></p> <ul style="list-style-type: none">i. Wet clean-up methods may only be used where adequate precautions have been taken to prevent the entry of wash water and other contaminants into the stormwater conveyance system or receiving waters.ii. Vehicle maintenance and repair operations with the potential to release pollutants are prohibited at commercial parking lots and storage facilities. <p><u>WPO Section 67.808(a)(9)(D) -- Rooftops</u></p> <ul style="list-style-type: none">i. Materials which may contaminate stormwater shall not be stored on rooftops unless adequate precautions have been taken to prevent their contact with stormwater.ii. Equipment such as emergency generators, HVAC systems and other similar items located on rooftops shall be inspected and preventive maintenance conducted to prevent leaks and spills.iii. Substances such as bird droppings, grease, leaves, that have accumulated on rooftops shall be removed, as practicable, to prevent or reduce the discharge of contaminants directly or indirectly to the stormwater conveyance system or receiving waters.iv. Where feasible, roof downspouts shall be routed away from work areas and toward pervious areas such as lawns, except where required under section 67.812.
C.1.b Landscaping Activities	<p><u>WPO Section 67.808(a)(6) -- Liquid waste management</u></p> <p>N. Where irrigation tail-water return ponds are used, the ponds shall be designed with the appropriate vertical separation between the base of the pond and the seasonal high groundwater mark and must be lined or managed to prevent the movement of water-soluble chemicals to the groundwater and to stormwater flows.</p> <p><u>WPO Section 67.808(a)(9)(B) -- Landscaping and grounds keeping</u></p> <ul style="list-style-type: none">i. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.</p> <p><u>WPO Section 67.808(a)(8) (C) -- Solid, non-hazardous waste</u></p> <p>vi. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry cleanup methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this chapter.</p> <p><u>WPO Section 67.808(a)(9)(B) -- Landscaping and grounds keeping</u></p> <p>ii. Paved surfaces such as sidewalks shall be cleaned regularly using dry clean-up methods such as sweeping or vacuuming. Hosing is permissible only after surfaces have previously been cleaned using dry methods, and only if precautions have been taken to prevent the discharge of runoff to the storm drain.</p>

<p>C.1.h Pressure Washing</p>	<p><u>WPO Section 67.808(a)(6) -- Liquid waste management</u></p> <p>(A) Wet cleanup methods such as hosing, steaming or pressure washing is prohibited except where adequate precautions have been taken to prevent the discharge of wash water or other pollutants into the stormwater conveyance system or receiving waters. Adequate measure may include filtering all pollutants from the water prior to discharge.</p> <p>(B) Disposal of slurries to the stormwater conveyance system or receiving waters is prohibited.</p> <p>(C) Rinse water shall be confined to a designated area such as a sanitary sewer, dead-end sump, process treatment system, or hole where water percolates or evaporates and solids are removed for collection and disposal. Rinse water and solids shall be re-used, recycled, or disposed of in accordance with this chapter.</p> <p>(D) Wash water shall be directed to an approved sanitary sewer or landscaped locations.</p> <p>(E) Wash racks.</p> <p>i. Wash rack areas shall have perimeter control and be properly sloped to a grated floor drain.</p> <p>ii. Wash rack areas shall drain to the sanitary sewer or to a holding tank.</p> <p>(F) Disposal of wastewater to the stormwater conveyance system, receiving waters, or the ground, is prohibited.</p> <p>(G) If provided, pump-out services for boats, portable toilets, or other holding tanks shall be conducted in a manner that prevents the release of sewage to the stormwater conveyance system or receiving waters.</p> <p>(H) Wastewater shall be disposed to the sanitary sewer at the job site or to a holding tank. Disposal of wastewater contained in holding tanks shall be disposed of to the sanitary sewer at the business's company headquarters or at an approved location.</p> <p>(I) Discharging backwash wastewater to the stormwater conveyance system or receiving waters is prohibited. Backwash wastewater may be disposed to the sanitary sewer; to a holding tank or settling pond; or where allowed by this chapter, by infiltration to the soil.</p> <p>(J) Pool, spa, and fountain water intended for discharge to the stormwater conveyance system shall contain a concentration of zero ppm chlorine or bromine prior to discharge.</p> <p>(K) Pool, spa, and fountain water discharged after acid washing shall be neutralized to a pH of 7.2 - 8.0.</p> <p>(L) If rinse water from the cleaning of portable sanitary toilet closets cannot be properly disposed of to the sanitary sewer at a job site, it shall be contained prior to disposal at the service facility or other approved facility.</p>
<p>C.1.i Fire Sprinkler Testing and Maintenance</p>	<p>Applicable General BMP Requirements, as established in WPO Section 67.806(a) – General BMP Requirements, must be implemented.</p>
<p>C.1.j Erodible Surfaces C.1.k Earth Moving Activities and Areas Under Construction</p>	<p><u>WPO Section 67.806(a) – General BMP Requirements</u></p> <p>(4) Protect, from erosion, those slopes that have been disturbed by clearing, grading, or landscaping and are more than three feet in height or steeper than 3:1 (run-to-rise). Slope protection shall occur prior to the first rainy season following the clearing, grading or landscaping of the slope and continuously thereafter.</p>
<p>C.2 ROADS AND STREETS</p>	
<p>C.2.a Road and Street Maintenance</p>	<p><u>WPO Section 67.808(a)(7) (C) -- Solid, non-hazardous waste</u></p> <p>vi. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry cleanup methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this chapter.</p> <p><u>WPO Section 67.808(a)(5) -- Housekeeping</u></p> <p>(A) The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter.</p> <p><u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u></p> <p>i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible.</p> <p>ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use.</p> <p>iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.</p>

<p>C.2.b Road and Street Use</p>	<p><u>WPO Section 67.808(a)(5) -- Housekeeping</u> (A) The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter. <u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u> iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.</p>
<p>C.3 STORM DRAIN SYSTEMS</p>	
<p>C.3.a Operation and Maintenance</p>	<p><u>WPO Section 67.808(a)(5) -- Housekeeping</u> (A) The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter.</p>
<p>C.3.c Illicit Discharges and Connections</p>	<p><u>WPO Section 67.806(a) – General BMP Requirements</u> (3) Eliminate illicit connections. <u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u> i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible. ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use. iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations. (A) Storm drain inlets located within or down gradient of the activity shall be covered or otherwise protected from the entry of pollutants during hours of operation.</p>

Category D: Specific Operations and Activities

<p>D.1 Accident and Medical Emergency Response</p>	<p><u>WPO Section 67.808(a)(5) -- Housekeeping</u> (B) Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters. <u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u> i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible. ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use. iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.</p>
<p>D.2 Animal Grooming and Washing</p>	<p><u>WPO Section 67.808(a)(6) -- Liquid waste management</u> C. Rinse water shall be confined to a designated area such as a sanitary sewer, dead-end sump, process treatment system, or hole where water percolates or evaporates and solids are removed for collection and disposal. Rinse water and solids shall be re-used, recycled, or disposed of in accordance with this chapter. D. Wash water shall be directed to an approved sanitary sewer or to approved landscaped locations. <u>WPO Section 67.808(a)(7) (C) -- Solid, non-hazardous waste</u> All areas where livestock, horses or other large animals are confined shall be bermed or curbed in a manner that avoids a discharge to the stormwater conveyance system or receiving water. If berms or curbs are not practicable, manure shall be cleaned up at least twice weekly and must be composted or properly stored prior to disposal.</p>
<p>D.3 Animal Keeping and Feeding</p>	<p><u>WPO Section 67.808(a)(5) – Housekeeping.</u> A. The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter. B. Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters. <u>WPO Section 67.808(a)(7) (C) -- Solid, non-hazardous waste</u> v. All areas where livestock, horses or other large animals are confined shall be bermed or curbed in a manner that avoids a discharge to the stormwater conveyance system or receiving water. If berms or curbs are not practicable, manure shall be cleaned up at least twice weekly and must be composted or properly stored prior to disposal.</p>
<p>D.4 Abrasive Blasting</p>	<p><u>WPO Section 67.808(a)(5) – Housekeeping.</u> A. The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter. B. Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters. <u>WPO Section 67.808(a)(7) (C) -- Solid, non-hazardous waste</u> vi. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry cleanup methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this chapter.</p>

<p>D.5 Casting, Forging, or Forming</p>	<p><u>WPO Section 67.808(a)(5) – Housekeeping.</u></p> <p>A. The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter.</p> <p>B. Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters.</p> <p><u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u></p> <p>i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible.</p> <p>ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use.</p> <p>iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.</p> <p><u>WPO Section 67.808(a)(7) (C) -- Solid, non-hazardous waste</u></p> <p>iv. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry cleanup methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this chapter.</p>
<p>D.6 Chemical Treatment</p>	<p><u>WPO Section 67.806(a) – General BMP Requirements</u></p> <p>(2) Implement, as practicable, those stormwater pollution prevention practices that are generally recognized in that discharger's industry or business as being effective and economically advantageous</p> <p><u>WPO Section 67.808(a)(5) – Housekeeping.</u></p> <p>A. The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter.</p> <p>B. Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters.</p> <p><u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u></p> <p>i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible.</p> <p>ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use.</p> <p>iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.</p>
<p>D.7 Control Burns</p>	<p><u>WPO Section 67.806(a) – General BMP Requirements</u></p> <p>(4) Protect, from erosion, those slopes that have been disturbed by clearing, grading, or landscaping and are more than three feet in height or steeper than 3:1 (run-to-rise). Slope protection shall occur prior to the first rainy season following the clearing, grading or landscaping of the slope and continuously thereafter.</p>

<p>D.8 Cutting, Trimming, or Grinding</p>	<p><u>WPO Section 67.808(a)(5) – Housekeeping.</u></p> <p>A. The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter.</p> <p>B. Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters.</p> <p><u>WPO Section 67.808(a)(6) -- Liquid waste management</u></p> <p>B. Disposal of slurries to the stormwater conveyance system or receiving waters is prohibited.</p> <p>M. Disposal of wastewater to the stormwater conveyance system, receiving waters, or the ground, is prohibited.</p> <p><u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u></p> <p>i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible.</p> <p>ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use.</p> <p>iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.</p> <p><u>WPO Section 67.808(a)(7) (C) -- Solid, non-hazardous waste</u></p> <p>vi. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry cleanup methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this chapter.</p>
<p>D.9 Differential Settling Maintenance</p>	<p>Applicable General BMP Requirements, as established in WPO Section 67.806(a) – General BMP Requirements, must be implemented.</p>
<p>D.10 Dust and Particulate-Generating Activities</p>	<p><u>WPO Section 67.806(a) – General BMP Requirements</u></p> <p>(1) Prior to the rainy season, remove or secure any significant accumulations of eroded soils from slopes previously disturbed by landscaping, clearing or grading, if those eroded soils could otherwise enter and impact the stormwater conveyance system or receiving waters during the rainy season.</p> <p>(2) Implement, as practicable, those stormwater pollution prevention practices that are generally recognized in that discharger's industry or business as being effective and economically advantageous.</p> <p>(3) Eliminate illicit connections.</p> <p>(4) Protect, from erosion, those slopes that have been disturbed by clearing, grading, or landscaping and are more than three feet in height or steeper than 3:1 (run-to-rise). Slope protection shall occur prior to the first rainy season following the clearing, grading or landscaping of the slope and continuously thereafter.</p> <p>(5) Store all materials and wastes with the potential to pollute stormwater in a manner that either prevents contact with rainfall and runoff from storm flows or contains contaminated runoff for treatment and disposal.</p> <p>(6) Locate, configure, and manage stockpiles of soil, green waste and compost to prevent the release of materials to the stormwater conveyance system or receiving waters.</p> <p><u>WPO Section 67.808(a)(5) – Housekeeping.</u></p> <p>A. The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter.</p> <p><u>WPO Section 67.808(a)(7) (C) -- Solid, non-hazardous waste</u></p> <p>iv. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry cleanup methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this chapter.</p>

D.11 Fabrication

WPO Section 67.806(a) – General BMP Requirements

(2) Implement, as practicable, those stormwater pollution prevention practices that are generally recognized in that discharger's industry or business as being effective and economically advantageous.

WPO Section 67.808(a)(5) – Housekeeping.

- A. The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter.
- B. Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters

WPO Section 67.808(a)(7)(A) -- Spill prevention and response

- i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible.
- ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use.
- iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.

WPO Section 67.808(a)(7) (C) -- Solid, non-hazardous waste

vi. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry cleanup methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this chapter.

D.12 Firefighting Field Training and Drills

WPO Section 67.806(a) – General BMP Requirements

- (4) Protect, from erosion, those slopes that have been disturbed by clearing, grading, or landscaping and are more than three feet in height or steeper than 3:1 (run-to-rise). Slope protection shall occur prior to the first rainy season following the clearing, grading or landscaping of the slope and continuously thereafter.
- (8) Use dry methods such as sweeping, vacuuming, raking, and application of absorbents to cleanup Pollutants, unless wet cleanup methods are otherwise allowed in this Chapter.

WPO Section 67.808(a)(6) -- Liquid waste management

H. Wastewater shall be disposed to the sanitary sewer at the job site or to a holding tank. Disposal of wastewater contained in holding tanks shall be disposed of to the sanitary sewer at the business's company headquarters or at an approved location.

WPO Section 67.808(a)(7)(A) -- Spill prevention and response

- i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible.
- ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use.
- iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.

WPO Section 67.808(a)(7)(B) -- Hazardous Materials and hazardous wastes

- i. Hazardous materials and wastes shall be stored, managed, and disposed in accordance with applicable federal, state and local laws and regulations.
- ii. Hazardous materials and wastes shall be stored above the ground. Where practicable, provide overhead coverage for all outside hazardous materials or waste storage areas. If overhead coverage is not available, stored materials shall be covered with an impervious material such as a tarp or other similar method.
- iii. Paints, coatings, thinners, and other materials shall be disposed of in accordance with this chapter.
- iv. Secondary containment of hazardous waste shall be provided around storage areas from which a significant potential exists to discharge materials or wastes to the stormwater conveyance system or receiving waters.
- v. Hazardous waste storage areas shall be inspected by the owner or operator, at least once prior to the rainy season and monthly during the rainy season.
- vi. Pesticides and other chemical products shall be used, stored, and disposed of in accordance with applicable federal, state, and local laws and regulations.
- vii. The outdoor application of fertilizers and pesticides is prohibited during rainfall.
- viii. Pesticide use shall be reduced to the MEP in areas where recurring applications of pesticides are performed.

WPO Section 67.808(a)(7)(C) -- Solid, non-hazardous waste

- i. Trash storage and disposal areas shall be kept clean and free of debris.
- ii. Dumpsters, grease bins, and other containers shall be maintained in a clean and leak proof condition and shall be kept securely closed when not in use.
- iii. Materials and equipment necessary for the clean-up of trash and debris shall be maintained and kept readily accessible.
- iv. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry cleanup methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this chapter.
- v. All areas where livestock, horses or other large animals are confined shall be bermed or curbed in a manner that avoids a discharge to the stormwater conveyance system or receiving water. If berms or curbs are not practicable, manure shall be cleaned up at least twice weekly and must be composted or properly stored prior to disposal.

<p>D.13 Fire Access Roads / Fire Breaks Maintenance / Creation</p>	<p><u>WPO Section 67.806(a) – General BMP Requirements</u></p> <p>(4) Protect, from erosion, those slopes that have been disturbed by clearing, grading, or landscaping and are more than three feet in height or steeper than 3:1 (run-to-rise). Slope protection shall occur prior to the first rainy season following the clearing, grading or landscaping of the slope and continuously thereafter.</p> <p><u>WPO Section 67.808(a)(9) – Outdoor Areas—housekeeping and grounds keeping practices.</u></p> <p>(A) Storm drain inlets located within or down gradient of the activity shall be covered or otherwise protected from the entry of pollutants during hours of operation.</p> <p><u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u></p> <p>i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible.</p> <p>ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use.</p> <p>iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.</p> <p><u>WPO Section 67.808(a)(7)(B) -- Hazardous Materials and hazardous wastes</u></p> <p>i. Hazardous materials and wastes shall be stored, managed, and disposed in accordance with applicable federal, state and local laws and regulations.</p> <p>ii. Hazardous materials and wastes shall be stored above the ground. Where practicable, provide overhead coverage for all outside hazardous materials or waste storage areas. If overhead coverage is not available, stored materials shall be covered with an impervious material such as a tarp or other similar method.</p> <p>iii. Paints, coatings, thinners, and other materials shall be disposed of in accordance with this chapter.</p> <p>iv. Secondary containment of hazardous waste shall be provided around storage areas from which a significant potential exists to discharge materials or wastes to the stormwater conveyance system or receiving waters.</p> <p>v. Hazardous waste storage areas shall be inspected by the owner or operator, at least once prior to the rainy season and monthly during the rainy season.</p> <p>vi. Pesticides and other chemical products shall be used, stored, and disposed of in accordance with applicable federal, state, and local laws and regulations.</p> <p>vii. The outdoor application of fertilizers and pesticides is prohibited during rainfall.</p> <p>viii. Pesticide use shall be reduced to the MEP in areas where recurring applications of pesticides are performed.</p> <p><u>WPO Section 67.808(a)(7)(C) -- Solid, non-hazardous waste</u></p> <p>i. Trash storage and disposal areas shall be kept clean and free of debris.</p> <p>ii. Dumpsters, grease bins, and other containers shall be maintained in a clean and leak proof condition and shall be kept securely closed when not in use.</p> <p>iii. Materials and equipment necessary for the clean-up of trash and debris shall be maintained and kept readily accessible.</p> <p>iv. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry cleanup methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this chapter.</p> <p>v. All areas where livestock, horses or other large animals are confined shall be bermed or curbed in a manner that avoids a discharge to the stormwater conveyance system or receiving water. If berms or curbs are not practicable, manure shall be cleaned up at least twice weekly and must be composted or properly stored prior to disposal.</p>
<p>D.14 Fire Hydrant, Tank, and Hose Testing and Maintenance</p>	<p><u>WPO Section 67.808(a)(8) -- Vehicles and equipment.</u></p> <p>(A) All vehicles and equipment shall be properly maintained and inspected to ensure their proper functioning.</p> <p>(B) Vehicles and equipment shall not be washed in areas where wash water or rinse water will drain to the stormwater conveyance system or receiving waters.</p> <p>(C) Infiltration of wash or rinse water to pervious surfaces is allowed with a minimum of 10 feet separation between the groundwater and the pervious surface, except that wash or rinse water generated from cleaning engines, mechanical parts, or heavy equipment shall not infiltrate a pervious surface.</p>

<p>D.15 Floors, Mats, and Surfaces</p>	<p><u>WPO Section 67.808(a)(5) -- Housekeeping</u> (B) Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters.</p> <p><u>WPO Section 67.808(a)(6) -- Liquid waste management</u> A. Wet cleanup methods such as hosing, steaming or pressure washing is prohibited except where adequate precautions have been taken to prevent the discharge of wash water or other pollutants into the stormwater conveyance system or receiving waters. Adequate measure may include filtering all pollutants from the water prior to discharge. B. Disposal of slurries to the stormwater conveyance system or receiving waters is prohibited. C. Rinse water shall be confined to a designated area such as a sanitary sewer, dead-end sump, process treatment system, or hole where water percolates or evaporates and solids are removed for collection and disposal. Rinse water and solids shall be re-used, recycled, or disposed of in accordance with this chapter. D. Wash water shall be directed to an approved sanitary sewer or landscaped locations.</p> <p><u>WPO Section 67.808(a)(9)(B) -- Landscaping and grounds keeping</u> ii. Paved surfaces such as sidewalks shall be cleaned regularly using dry clean-up methods such as sweeping or vacuuming. Hosing is permissible only after surfaces have previously been cleaned using dry methods, and only if precautions have been taken to prevent the discharge of runoff to the storm drain.</p>
<p>D.16 Food Preparation</p>	<p><u>WPO Section 67.808(a)(5) – Housekeeping.</u> A. The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter. B. Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters</p> <p><u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u> i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible. ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use. iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.</p>
<p>D.17 Gas Extraction</p>	<p>Applicable General BMP Requirements, as established in WPO Section 67.806(a) – General BMP Requirements, must be implemented.</p>
<p>D.18 Leachate Collection System Maintenance</p>	<p>Applicable General BMP Requirements, as established in WPO Section 67.806(a) – General BMP Requirements, must be implemented.</p>
<p>D.19 Methane Recovery System Maintenance and Repair</p>	<p>Applicable General BMP Requirements, as established in WPO Section 67.806(a) – General BMP Requirements, must be implemented.</p>

<p>D.20 Mixing</p>	<p><u>WPO Section 67.806(a) – General BMP Requirements</u> (2) Implement, as practicable, those stormwater pollution prevention practices that are generally recognized in that discharger's industry or business as being effective and economically advantageous <u>WPO Section 67.808(a)(5) – Housekeeping.</u> A. The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter. B. Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters. <u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u> i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible. ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use. iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations. <u>WPO Section 67.808(a)(7) (C) -- Solid, non-hazardous waste</u> vi. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry cleanup methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this chapter.</p>
<p>D.21 Painting or Coating Activities</p>	<p><u>WPO Section 67.806(a) – General BMP Requirements</u> (2) Implement, as practicable, those stormwater pollution prevention practices that are generally recognized in that discharger's industry or business as being effective and economically advantageous <u>WPO Section 67.808(a)(5) – Housekeeping.</u> A. The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter. B. Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters. <u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u> i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible. ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use. iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.</p>
<p>D.22 Pesticide or Other Chemical Product Formulation</p>	<p><u>WPO Section 67.806(a) – General BMP Requirements</u> (2) Implement, as practicable, those stormwater pollution prevention practices that are generally recognized in that discharger's industry or business as being effective and economically advantageous. (7) Use all materials with the potential to pollute runoff, such as outdoor cleaning and maintenance products, fertilizers, pesticides and herbicides in accordance with label directions. No such product may be disposed of or rinsed into receiving waters or the stormwater conveyance system. <u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u> i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible. ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use. iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.</p>

D.23 Ramp and Runway Maintenance	<p><u>WPO Section 67.808(a)(5) – Housekeeping.</u></p> <p>A. The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter.</p> <p>B. Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters.</p>
D.24 Recreational Uses	<p><u>WPO Section 67.808(a)(6) -- Liquid waste management</u></p> <p>F. Disposal of wastewater to the stormwater conveyance system, receiving waters, or the ground, is prohibited.</p> <p>G. If provided, pump-out services for boats, portable toilets, or other holding tanks shall be conducted in a manner that prevents the release of sewage to the stormwater conveyance system or receiving waters.</p> <p>L. If rinse water from the cleaning of portable sanitary toilet closets cannot be properly disposed of to the sanitary sewer at a job site, it shall be contained prior to disposal at the service facility or other approved facility.</p>
D.25 Sludge Removal and Disposal	<p><u>WPO Section 67.808(a)(6) -- Liquid waste management</u></p> <p>B. Disposal of slurries to the stormwater conveyance system or receiving waters is prohibited.</p>
D.26 Special Events	<p><u>WPO Section 67.806(a) – General BMP Requirements</u></p> <p>(8) Use dry methods such as sweeping, vacuuming, raking, and application of absorbents to cleanup Pollutants, unless wet cleanup methods are otherwise allowed in this Chapter.</p>
D.27 Treatment Pond Maintenance	<p><u>WPO Section 67.808(a)(6) -- Liquid waste management</u></p> <p>B. Disposal of slurries to the stormwater conveyance system or receiving waters is prohibited.</p> <p>F. Disposal of wastewater to the stormwater conveyance system, receiving waters, or the ground, is prohibited.</p> <p>N. Where irrigation tail-water return ponds are used, the ponds shall be designed with the appropriate vertical separation between the base of the pond and the seasonal high groundwater mark and must be lined or managed to prevent the movement of water-soluble chemicals to the groundwater and to stormwater flows.</p>
D.28 Wastewater Treatment	<p><u>WPO Section 67.808(a)(6) -- Liquid waste management</u></p> <p>F. Disposal of wastewater to the stormwater conveyance system, receiving waters, or the ground, is prohibited.</p> <p>I. Discharging backwash wastewater to the stormwater conveyance system or receiving waters is prohibited. Backwash wastewater may be disposed to the sanitary sewer; to a holding tank or settling pond; or where allowed by this chapter, by infiltration to the soil.</p>
D.29 Weed Abatement and Vegetation Clearing	<p><u>WPO Section 67.806(a) – General BMP Requirements</u></p> <p>(1) Prior to the rainy season, remove or secure any significant accumulations of eroded soils from slopes previously disturbed by landscaping, clearing or grading, if those eroded soils could otherwise enter and impact the stormwater conveyance system or receiving waters during the rainy season.</p> <p>(2) Implement, as practicable, those stormwater pollution prevention practices that are generally recognized in that discharger's industry or business as being effective and economically advantageous.</p> <p>(8) Use dry methods such as sweeping, vacuuming, raking, and application of absorbents to cleanup Pollutants, unless wet cleanup methods are otherwise allowed in this Chapter.</p>

D.30 Welding	<p><u>WPO Section 67.808(a)(5) – Housekeeping.</u></p> <p>A. The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter.</p> <p>B. Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters.</p>
D.31 Automobile Painting	<p><u>WPO Section 67.806(a) – General BMP Requirements</u></p> <p>(2) Implement, as practicable, those stormwater pollution prevention practices that are generally recognized in that discharger's industry or business as being effective and economically advantageous</p> <p><u>WPO Section 67.808(a)(5) – Housekeeping.</u></p> <p>A. The property on which the business activity is located shall be inspected for accumulations of debris, litter, waste, organic matter, such as leaves or cut grass or other materials. Such accumulations shall be removed and disposed of in accordance with this chapter.</p> <p>B. Areas where work is being actively conducted shall be cleaned daily using dry clean-up methods such as sweeping, wiping, vacuuming, or raking. Wet clean-up methods such as hosing may only be used if precautions have been taken to prevent the discharge of wash water or other materials to the stormwater conveyance system or receiving waters.</p> <p><u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u></p> <p>i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible.</p> <p>ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use.</p> <p>iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.</p>
D.32 Methane Recovery System Condensate Collection	<p><u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u></p> <p>i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible.</p> <p>ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use.</p> <p>iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations.</p>

<p>D.33 Fire Lane Maintenance / Creation</p>	<p><u>WPO Section 67.808(a)(7)(A) -- Spill prevention and response</u></p> <ul style="list-style-type: none"> i. Materials and equipment necessary for spill response shall be maintained and kept readily accessible. ii. All operators, employees, and workers conducting potential discharge activities shall be trained in their proper use. iii. Spills and leaks shall be promptly cleaned up and the generated waste disposed of in accordance with the applicable federal, state and local laws and regulations. <p><u>WPO Section 67.808(a)(7)(B) -- Hazardous Materials and hazardous wastes</u></p> <ul style="list-style-type: none"> i. Hazardous materials and wastes shall be stored, managed, and disposed in accordance with applicable federal, state and local laws and regulations. ii. Hazardous materials and wastes shall be stored above the ground. Where practicable, provide overhead coverage for all outside hazardous materials or waste storage areas. If overhead coverage is not available, stored materials shall be covered with an impervious material such as a tarp or other similar method. iii. Paints, coatings, thinners, and other materials shall be disposed of in accordance with this chapter. iv. Secondary containment of hazardous waste shall be provided around storage areas from which a significant potential exists to discharge materials or wastes to the stormwater conveyance system or receiving waters. v. Hazardous waste storage areas shall be inspected by the owner or operator, at least once prior to the rainy season and monthly during the rainy season. vi. Pesticides and other chemical products shall be used, stored, and disposed of in accordance with applicable federal, state, and local laws and regulations. vii. The outdoor application of fertilizers and pesticides is prohibited during rainfall. viii. Pesticide use shall be reduced to the MEP in areas where recurring applications of pesticides are performed. <p><u>WPO Section 67.808(a)(7)(C) -- Solid, non-hazardous waste</u></p> <ul style="list-style-type: none"> i. Trash storage and disposal areas shall be kept clean and free of debris. ii. Dumpsters, grease bins, and other containers shall be maintained in a clean and leak proof condition and shall be kept securely closed when not in use. iii. Materials and equipment necessary for the clean-up of trash and debris shall be maintained and kept readily accessible. iv. Loose aggregate, mortar, and dust shall be routinely cleaned up using dry cleanup methods such as sweeping or vacuuming. Wet methods may be used only if necessary to adequately clean equipment for reuse, or where water must be used to lubricate and flush a cut, but only if performed in accordance with this chapter. v. All areas where livestock, horses or other large animals are confined shall be bermed or curbed in a manner that avoids a discharge to the stormwater conveyance system or receiving water. If berms or curbs are not practicable, manure shall be cleaned up at least twice weekly and must be composted or properly stored prior to disposal. <p><u>WPO Section 67.808(a)(9) – Outdoor Areas—housekeeping and grounds keeping practices.</u></p> <p>(A) Storm drain inlets located within or down gradient of the activity shall be covered or otherwise protected from the entry of pollutants during hours of operation.</p>
<p>D.34 Process Water Pre-Treatment</p>	<p>Applicable General BMP Requirements, as established in WPO Section 67.806(a) – General BMP Requirements, must be implemented.</p>

1. Mobile Automobile Repair, Maintenance, Fueling, and Cleaning

Applicable SIC Codes

7538 – General Automotive Repair

7539 – Automotive Repair, Nec

7549 – Automotive Services (wrecking, undercoating, rust proofing, lubrication)

Description

This category includes mobile businesses primarily engaged in the repair of damaged motor vehicles such as repair of engines, transmissions, suspensions, and other mechanical components of motor vehicles at locations other than their own base of operation. Many of the tasks performed for this category are not generally associated with the body or interior work. These businesses may also perform preventive maintenance such as removal and replacement of vehicle fluids including fuel and the cleaning of automotive parts and equipment. This category includes vehicle mechanic companies who provide offsite services and repair.

Table 5.3.1 lists the Pollutant-generating Activities potentially associated with mobile automobile repair, maintenance, fueling and cleaning, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs will vary depending on actual operations and practices, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.3.1 – Pollutant-Generating Activities and Associated Pollutants of Concern for Mobile Automobile Repair, Maintenance, Fueling and Cleaning

Priority PGA (◆)	PGA Reference Number	Pollutant-generating Activity (PGA)	Potential Pollutants-of-Concern (POCs)							
			Sediment	Nutrients	Trash	Metals	Bacteria	Oil & Grease	Organics	Pesticides

2. Mobile Equipment Repair, Maintenance, Fueling, and Cleaning

Applicable SIC Codes

7519 – Utility Trailer Rentals

7353 – Heavy Construction Equipment Rentals

7359 – Equipment Rental

7623 – Refrigeration Services and Repair (Refrigerator, HVAC, etc.)

7692 – Welding Repair

7699 – Equipment Repair

Description

This category includes mobile businesses primarily engaged in the repair and maintenance of equipment, body parts and interior finishing; repaint body surfaces; and repair and/or replace of automotive glass at locations other than their own base of operation. This category also includes metal repair of defective automobile body parts. This category includes equipment rental and repair mechanics that perform work other than at their business location.

Table 5.3.2 lists the Pollutant-generating Activities potentially associated with mobile equipment repair, maintenance, fueling and cleaning, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs will vary depending on actual operations and practices, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.3.2 – Pollutant-Generating Activities and Associated Pollutants of Concern for Mobile Equipment Repair, Maintenance, Fueling and Cleaning

3. Mobile Vehicle Body Repair and Painting

Applicable SIC Codes

7532 – Top & body repair & paint shops

7536 – Automotive Glass Replacement Shops

7549 – Automotive Services (wrecking, undercoating, rust proofing, lubrication)

Description

This category includes mobile businesses engaged in the repair of automotive tops, bodies, and interiors, or automotive painting and refinishing at locations other than their own base of operation. Operations associated with this category generally include exterior, interior and frame repair of vehicles, which may include windshield removal/replacement, metal parts fabrication, and removing and replacing fluids to gain access to areas requiring repair. This category includes all vehicle body repair and painting contractors that perform work at sites other than at their own business location.

Table 5.3.3 lists the Pollutant-generating Activities potentially associated with vehicle body repair and painting, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs will vary depending on actual operations and practices, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.3.3 – Pollutant-Generating Activities and Associated Pollutants of Concern for Vehicle Body Repair and Painting

Priority PGA (◆)	PGA Reference Number	Pollutant-generating Activity (PGA)	Potential Pollutants-of-Concern (POCs)							
			Sediment	Nutrients	Trash	Metals	Bacteria	Oil & Grease	Organics	Pesticides
Category A: Management of Materials, Equipment, and Wastes

4. Mobile Vehicle Washing

<u>Applicable SIC Codes</u>

7542 – Car Washing

Description

This category includes mobile businesses engaged in providing service for vehicle washing and detailing services at locations other than their own base of operation. Detailing is the practice of performing an extremely thorough cleaning, polishing and waxing (etc.) of a vehicle. Elements of exterior detailing include claying, polishing, and waxing. Interior detailing involves the cleaning of the interior of a vehicle using vacuums, liquid cleaners, and brushes. Engine detailing involves cleaning of the engine bay area to remove dirt and grease with the use of pressure washers, degreasers and all-purpose cleaners. This category includes any cleaning business that performs work on vehicles at sites other than at their own business location.

Table 5.3.4 lists the Pollutant-generating Activities potentially associated with Mobile Vehicle Washing, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs will vary depending on actual operations and practices, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.3.4 – Pollutant-Generating Activities and Associated Pollutants of Concern for Mobile Vehicle Washing

5. Pest Control Services

Applicable SIC Codes

7342 – Disinfecting & pest control services.

Description

This category includes mobile businesses primarily engaged in providing properly trained pest management services to resolve pest problems, these professionals offer services such as identification, and inspection of pest infestations, find the nature and extent of the problem, and use the best methods to control pests. These operations are primarily mobile in nature and rarely take place at a base of operation. These businesses also perform services for treatment, application, and mixing of pesticides (herbicides, fungicides, or insecticides) using sprays, dusts, vapors, baits, or soil incorporation on trees, shrubs, lawns, botanical crops, or structures. These businesses fall into two groups:

- a. **Structural:** Pest control services are provided to the industrial commercial, business section and households, and
- b. **Agricultural:** Pest control services are provided or offered to agricultural sites.

Table 5.3.5 lists the Pollutant-generating Activities potentially associated with Pest Control Services, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs will vary depending on actual operations and practices, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.3.5 – Pollutant-generating Activities and Associated Pollutants of Concern for Pest Control Services

Priority PGA (◆)	PGA Reference Number	Pollutant-generating Activity (PGA)	Potential Pollutants-of-Concern (POCs)							
			Sediment	Nutrients	Trash	Metals	Bacteria	Oil & Grease	Organics	Pesticides

6. Mobile Carpet, Drape or Furniture Cleaning

Applicable SIC Codes

7217 – Carpet and upholstery cleaning

Description

This category includes mobile businesses primarily engaged in a full range of cleaning services for all fabrics such as carpet, drape, furniture, rugs and upholstery cleaning. Operations usually include steam cleaning or pressure cleaning of fabric materials damaged by floods, pet stains, odors, dirt, food, etc. This category includes any cleaning business that performs work on carpets or upholstery at sites other than at their own business location.

Table 5.3.6 lists the Pollutant-generating Activities potentially associated with Pest Control Services, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs will vary depending on actual operations and practices, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.3.6 – Pollutant-generating Activities and Associated Pollutants of Concern for Mobile Carpet, Drape or Furniture Cleaning

◆	D.2.f	Pressure Washing	○	○	○	○	○	○	○	○

7. Cement Mixing or Cutting

Applicable SIC Codes

3241 – Cement, hydraulic

Description

This category includes mobile businesses primarily engaged in the mixing of concrete or other type material as well as the cutting of concrete, masonry or other type materials (bricks, etc.). Mixing operations primarily consist of the addition of water or another liquid to a building material to produce a structural component such as concrete or mortar. Cutting operations primarily consist of adding water or other type liquid to lubricate a cutting tool as it slices through building materials.

Table 5.3.7 lists the Pollutant-generating Activities potentially associated with Cement Mixing or Cutting, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs will vary depending on actual operations and practices, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.3.7 – Pollutant-generating Activities and Associated Pollutants of Concern for Cement Mixing or Cutting

Priority PGA (◆)	PGA Reference Number	Pollutant-generating Activity (PGA)	Potential Pollutants-of-Concern (POCs)

8. Masonry

<u>Applicable SIC Codes</u>

1741 – Masonry and other stone work

Description

This category includes mobile businesses primarily engaged in stone, brick and tile work. Operations generally consist of mixing mortar and concrete as well as cutting tile, stone and bricks. This category includes all masonry work performed at sites other than at their own business location

Table 5.3.8 lists the Pollutant-generating Activities potentially associated with Masonry activities, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs will vary depending on actual operations and practices, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.3.8 – Pollutant-generating Activities and Associated Pollutants of Concern for Masonry

Priority PGA (◆)	PGA Reference Number	Pollutant-generating Activity (PGA)	Potential Pollutants-of-Concern (POCs)							
			Sediment	Nutrients	Trash	Metals	Bacteria	Oil & Grease	Organics	Pesticides

9. Painting and Coating Activities

Applicable SIC Codes

1721 – Painting and Paper Hanging

3479 – Coating, Engraving, and Allied Services, Not Elsewhere Classified

Description

This category includes mobile businesses primarily engaged in applying paints, coatings, stains, varnishes, lacquers, enamels, shellacs, and water repellent coatings at locations other than their own base of operation. Operations generally include the application of paint or coating by brush, roller, or pneumatic applicator. This category includes all painters and coaters who perform work in sites other than at their own business location

Table 5.3.9 lists the Pollutant-generating Activities potentially associated with Painting and Coating Activities, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs will vary depending on actual operations and practices, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.3.9 – Pollutant-generating Activities and Associated Pollutants of Concern for Painting and Coating Activities

10. Landscaping

Applicable SIC Codes

0782 - Law and Garden Services
0783-Ornamental Shrub and Tree Services

Description

This category includes mobile businesses primarily engaged in maintaining grounds or landscape of a property using hand or power tools or equipment. Operations may include any combination of the following: sod laying, mowing, trimming, planting, watering, fertilizing, digging, raking, and sprinkler installation.

Table 5.3.10 lists the Pollutant-generating Activities potentially associated with Landscaping, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs will vary depending on actual operations and practices, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.3.10 – Pollutant-generating Activities and Associated Pollutants of Concern for Landscaping

11. Pool and Fountain Cleaning

<u>Applicable SIC Codes</u>

7389 – Swimming Pool Services

Description

This category includes mobile businesses primarily engaged in washing or cleaning pools, fountains and other water features, like spas and ponds, for their sanitation. Operations generally include adding chemicals, checking Ph, removing debris and trash and adding and emptying water. These operations primarily occur offsite away from the businesses base of operation.

Table 5.3.11 lists the Pollutant-generating Activities potentially associated with Pool and Fountain Cleaning, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs will vary depending on actual operations and practices, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

12. Portable Sanitary Services

<u>Applicable SIC Codes</u>

4959 – Sanitary Services

Description

This category includes mobile businesses primarily engaged in the rental, maintenance and cleaning of portable toilets and disposal of sanitary wastes. These businesses provide services for the industrial and event sectors and supply portable sanitation services from the small events to largest construction projects. Operations for these contractors occur both at their base of operations and offsite, for the purposes of the mobile business category, the County is primarily concerned about the activities that occur offsite.

Table 5.3.12 lists the Pollutant-generating Activities potentially associated with Portable Sanitary Services, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs will vary depending on actual operations and practices, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Table 5.3.12 – Pollutant-generating Activities and Associated Pollutants of Concern for Portable Sanitary Services

13. Power Washing Services

<u>Applicable SIC Codes</u>

1799 – Special Trade Contractors

Description

This category includes mobile businesses primarily engaged in using pneumatic devices to pressurize water to clean surfaces. Operations usually generate wastewater and other trash and debris that could significantly impact the MS4 and receiving waters. Power washing can be performed on buildings, pavement, impervious surfaces and includes any surface washing.

Table 5.3.13 lists the Pollutant-generating Activities potentially associated with Power Washing Services, and indicates the Pollutants-of-Concern (POCs) typically associated with them. Specific PGAs and POCs will vary depending on actual operations and practices, and may therefore differ from those presented. Black diamonds indicate that the corresponding PGA is considered a priority.

Attachment 5.4 – Descriptions of Municipal Pollutant Generating Activities

PGA Reference	Attachment 5.4. Pollutant Generating Activities for Municipal Sources
<i>Category A: Management of Materials and Wastes</i>	
A.1	MATERIALS MANAGEMENT AND STORAGE
A.1.a	<u>Materials Loading and Unloading.</u> Outdoor loading and unloading activities that occur in areas not confined within a facility. These activities could include any assortment of materials and pollutants. Loading and unloading activities generally include the use of large equipment such as loaders, forklifts, dump trucks, or cranes.
A.1.b	<u>Storage of Materials.</u> The storage of dry materials outdoors may contribute pollutants to runoff if not covered and/or raised to prevent contact with water. Materials generally associated with outside storage are stockpiles of raw materials such as dirt, aggregate, mulch, compost, as well as finished products, by-products, containers, and cast off parts and pieces. Resulting runoff can become contaminated when materials/pollutants wash off and dissolve or become suspended in water runoff, or are indirectly added to runoff by spills and leaks.
A.1.c	<u>Liquid Container Storage.</u> Accidental releases of liquid materials from above ground storage tanks, drums, dumpsters, and other containers may contaminate water runoff when not properly managed. Potential pollutants include petroleum products (gas, diesel, etc.), oils, greases, lubricants, solvents, wastewater, or any liquid substance that is not clean water. Improperly stored items may contribute to accidental spills. Materials spilled, leaked, or lost from liquid storage containers may accumulate in soils or on other surfaces and can be carried away with runoff.
A.2	WASTE HANDLING AND STORAGE
A.2.a	<u>Hazardous Waste.</u> Improper management and disposal of hazardous wastes can result in the discharge of a variety of toxic compounds. Used or discarded solvents, petroleum products, oils, grease, heavy metals, paint by-products, nutrients, and acidic or alkaline materials are generally associated with hazardous waste storage and handling. Universal wastes such as batteries, fluorescent tubes, gas containers, and some electronic devices are also considered hazardous. Pollutants typically associated with universal wastes are mercury, lead, cadmium, copper, etc. Hazardous and universal wastes must be disposed at a certified collection facility or by a certified collection company and may not be discarded into solid waste landfills.
A.2.b	<u>Solid Waste.</u> Solid waste storage containers may allow pollutants to be discharged (spilled or leaked) when improperly managed. Trash and debris that are not kept in a closed trash bin can get blown away by wind. Overfilled trash bins and litter can also end up in stormwater runoff and storm drains. Trash containers that are not properly cleaned and maintained can also build up bacteria and other pollutants that will runoff if contacted by water. Trash that contains liquid substances should be emptied prior to placement in solid waste receptacles to avoid leaks and spills.
A.2.c	<u>Food Grease and Oil.</u> Residual fats, oil, and grease are byproducts that are typically associated with food service. When water is used to wash surfaces (floors, mats, walls, sidewalks, etc.) that these byproducts come into contact with, wash water could be improperly discharged to the storm drain. Areas where washing occurs that drain to the sanitary sewer may not be equipped or designed to handle the amount of wash water produced by this activity and may result in overflows to the storm drain.
A.2.d	<u>Pet Waste / Manure.</u> Waste from animal facilities (stables, kennels, etc.) and manure storage areas which are not contained or covered could wash into storm drains and/or waterways. Surface waters affected by animal waste generally suffer from algal growth and reduced oxygen caused by the release of nutrients in water; endangering aquatic life. Bacteria and viruses are also carried in animal waste/manure which could infect and endanger animal life.
A.2.e	<u>Liquid Waste.</u> Outdoor storage of liquids can potentially be spilled, poured, or dumped and can flow to storm drains or nearby waterways. Liquids stored outside should be contained and covered to prevent contact with stormwater and runoff. Liquids such as oil and grease are of particular concern because they can dissolve or float on the surface of the water and are generally toxic to aquatic life. Liquid hazardous materials should have secondary containment to prevent accidental release.

PGA Reference	<p style="text-align: center;">Attachment 5.4. Pollutant Generating Activities for Municipal Sources</p>
A.2.f	<p><u>Sanitary Wastes</u>. Sanitary wastes may be discharged to storm drains and waterways from sanitary sewers, septic systems, and portable sanitary toilets. Discharges from septic systems are often the result of failed leach fields or broken lines. During heavy rains or snowmelt, the system may back up into the house, resulting in the removal of the clean-out plug, allowing sewage to runoff into waterways. Sewer overflows often occur during wet weather, when rainwater overwhelms the system, forcing raw sewage out the sanitary sewer and into runoff and waterways. Maintenance, cleaning, and repair of these systems may also result in a release if not properly contained. Untreated sewage carries infectious bacteria, viruses, parasites and toxic chemicals. Improper management of septic systems and portable sanitary toilets may result in excessive flows, build up of sludge and scum, and inputs of toxic compounds that can enter storm drains and waterways.</p>
A.2.g	<p><u>Green Waste</u>. Green waste includes landscape and garden waste such as grass, weeds, vegetation, flower cuttings, leaf litter, tree pruning, and hedge trimmings. Green waste often enters storm drains and waterways and decomposes. This decomposition, along with fertilizer residues, increases the amount of nutrients in the water which leads to a decrease in the available oxygen for aquatic life. Green waste can also clog the storm drain system, creating flooding problems and harborage of bacteria. Pesticide and fertilizer residues may also be carried to waterways with the green waste, often reducing reproduction or killing aquatic life. Green waste is biodegradable and should be disposed separately from other wastes and/or composted.</p>
A.2.h	<p><u>Recyclables / Reusables</u>. Recycling and reusing materials is important to reduce the amount of wastes going to landfills. Recyclable wastes have the potential to be reused or converted into raw materials for the production of new products. Recyclable products typically include the following components: glass, paper, aluminum, asphalt, iron, textiles, and plastics, as well as hazardous materials such as antifreeze and oil. Recycling and reusing items also reduces the possibility of the discarded item entering waterways.</p>
Category B: Vehicle and Equipment Activities	
B.1	VEHICLE AND EQUIPMENT STORAGE
B.1.a	<p><u>Outdoor Vehicle Storage</u>. Most vehicles typically have components that contain metals, chemicals, and fluids. Dirty vehicles or poorly maintained vehicles may have accumulated sediment, debris or other material that could wash away during a storm event or as runoff. Vehicles that are in disrepair or are missing parts such as a hood, have a high likelihood of leaking fluids and contributing to polluted runoff. Common pollutants associated with stored vehicles include oil and grease, petroleum hydrocarbons, heavy metals, nutrients, sediment, and particulates from surface coatings.</p>
B.1.b	<p><u>Outdoor Equipment and Parts Storage</u>. Equipment storage may encompass a wide array of tools, vehicles and work equipment. Many of these items have working parts that could contain metals, chemicals, fluids, and may be impacted with sediment or debris.</p>
B.2	VEHICLE AND EQUIPMENT REPAIR, MAINTENANCE, AND SERVICE
B.2.a	<p><u>Vehicle and Equipment Repair</u>. Vehicle or equipment maintenance and repair are potentially significant sources of polluted runoff, due to use of harmful materials and wastes generated during maintenance and repair processes. Vehicle/equipment repair and service (e.g., parts cleaning, changing/charging vehicle batteries, repairing or replacing mufflers and catalytic converters, and repairing vehicle air conditioners) can impact water quality if runoff becomes polluted by the associated contaminants (metals, hydrocarbons, solvents, gasoline, etc).</p>
B.2.b	<p><u>Changing Vehicle Fluids</u>. Examples of fluids that must be periodically changed are motor oil, transmission fluid, brake fluid, and antifreeze. Changing vehicle fluids also includes temporary storage of both new and waste fluids, and management or disposal of the waste fluids. Spills and leaks that occur during changing fluids can contribute hydrocarbons, oil, grease, and heavy metals to stormwater runoff.</p>

PGA Reference	<p style="text-align: center;">Attachment 5.4. Pollutant Generating Activities for Municipal Sources</p>
B.2.c	<p><u>Vehicle and Equipment Fueling.</u> These activities include transferring fuel into mobile vehicles or equipment, and any kind of fuel dispensing activities at permanent or temporary stations. Spills and leaks that occur during fueling can contribute hydrocarbons, oil, grease, and heavy metals to stormwater runoff.</p>
B.2.d	<p><u>Vehicle Washing.</u> Wash water from vehicle washing activities performed outdoors or in areas where wash water flows onto pavement and into storm drains can contribute detergents / phosphates, oils, greases, heavy metals, and suspended solids creating polluted runoff.</p>
B.2.e	<p><u>Equipment Cleaning.</u> Includes activities related to rinsing, and removal of residues from engines, tools, and equipment typically using detergent chemicals. Wash water from cleaning activities performed outdoors or in areas where wash water flows onto the pavement and into storm drains can contribute hydrocarbons and other organic compounds, oils, greases, nutrients, phosphates, heavy metals, and suspended solids to runoff.</p>
<i>Category C: Outdoor Area Maintenance</i>	
C.1	BUILDING AND GROUNDS MAINTENANCE
C.1.a	<p><u>Parking Areas.</u> The use and maintenance of parking lots and driveways has the potential to introduce pollutants into the storm drain system. Automotive fluids, litter, sediment, suspended solids, hydrocarbons, oil, grease, heavy metals, and food waste are some of the potential pollutants that may be discharged from the daily use of parking lots and driveways.</p>
C.1.b	<p><u>Landscaping Activities.</u> Gardening activities such as removing vegetation, exposing soils to erosion, stockpiling erosive materials, applying fertilizers and pesticides, disposing of vegetation or other landscaping debris can severely impact waterways if sufficient precautions are not taken to prevent the discharge of contaminants. Contaminants typically include total suspended solids, nutrients, heavy metals, bacteria, pesticides, and vegetative debris. Improper sprinkler maintenance can also result in over-watering, causing erosion.</p>
C.1.c	<p><u>Pesticide, Herbicide, and Fertilizer Application.</u> Over-application and misuse of pesticides, herbicides, and fertilizers result in polluted runoff. Different types of pesticides and herbicides include applications such as dusts, sprays, granular formulations, fumigants, antimicrobial paints and other surface coatings.</p>
C.1.d	<p><u>Pool, Spa, and Fountain Maintenance.</u> Maintenance of pool, spa, and fountains typically include acid washing, filter backwashing, partial draining to dilute the stabilizer concentration or to provide space while acid washing, complete draining, recharging, and treating water for recreation or ornamental purposes. Chlorine or chloramine is commonly used as a disinfectant in swimming pool water. This water, if discharged to the storm drain system, can be toxic to aquatic life. Pollutants found in lakes, lagoons, and fountains, include chemical algaecides that are added to control algae mainly for aesthetic reasons (visual and odor). Improper discharges of water can also cause erosion of slopes and sedimentation to storm drains and waterways.</p>
C.1.e	<p><u>Rooftop and Downspout Maintenance.</u> Building rooftops and downspouts can generate a substantial amount of concentrated runoff from buildings. Stormwater runoff from buildings collects pollutants as water flows across rooftops. These pollutants may include oil, grease, sediment and debris from equipment located or stored on the roof.</p>
C.1.f	<p><u>Sidewalks.</u> Sidewalks and other paved impervious surfaces can collect and transport pollutants such as dirt, leaves, clippings, trash, and other associated contaminants into storm drains or waterways.</p>
C.1.g	<p><u>Break Areas and Public Areas.</u> Break areas, patios, and other paved public areas present opportunities for a variety of contaminants (e.g., leaves, clippings, dirt, trash) to accumulate on impervious surfaces and to runoff into storm drains or waterways.</p>
C.1.h	<p><u>Pressure Washing.</u> Pressurized water typically ejected from a hand-held wand or nozzle is used to clean a wide variety of surfaces and objects. The wastewater from washing sidewalks and parking structures contains all the contaminants being removed from the surface, as well as the toxic cleaning agents. Depending on the application, pressure washing may be conducted with added cleaners.</p>

PGA Reference	<p style="text-align: center;">Attachment 5.4. Pollutant Generating Activities for Municipal Sources</p>
C.1.i	<p><u>Fire Sprinkler Testing and Maintenance.</u> Most commercial, industrial, and municipal buildings as well as newer residential developments have fire sprinkler systems. Fire sprinklers within buildings are usually tested once per year. Testing associated with building maintenance includes parts repair, replacement, and flushing of the water lines, in which the water is not typically contained. Test water is known to contain metals (in the form of rust), bacteria, and algae.</p>
C.1.j	<p><u>Erodible Surfaces.</u> Some properties may contain areas that are denuded of vegetation or that contain slopes or surfaces subject to soil erosion. Pollutants typically associated with exposed surfaces include sediment, nutrients, and bacteria.</p>
C.1.k	<p><u>Earth Moving Activities and Areas Under Construction.</u> Areas denuded of vegetation or that have recently been disturbed are subject to soil erosion, sediment transport, and sedimentation. Pollutants typically associated with construction sites and exposed surfaces include sediment, nutrients, and bacteria.</p>
C.2	<p style="text-align: center;">ROADS AND STREETS</p>
C.2.a	<p><u>Road and Street Maintenance.</u> Streets, roads, and highways are significant sources of pollutants in stormwater runoff and should be swept or cleaned regularly to remove pollutants prior to storm events. Operation and maintenance practices of these roads and highways can also contribute to the problem if not conducted properly. Polluted runoff from roadway and bridge maintenance should be addressed on a site-specific basis. Common pollutants from road maintenance include sediment, hydrocarbons, and metals.</p>
C.2.b	<p><u>Road and Street Use.</u> Streets, roads, and highways are significant sources of pollutants in stormwater runoff because their daily operation can result in spills, dumping, and accumulation of pollutants from vehicle and pedestrian use. Common pollutants from road use include sediment, hydrocarbons, metals, and trash.</p>
C.3	<p style="text-align: center;">STORM DRAIN SYSTEMS</p>
C.3.a	<p><u>Storm Drain Operation and Maintenance.</u> As a consequence of its function, the storm drain system collects and transports stormwater and urban runoff that may contain pollutants. In the absence of routine inspection, cleaning, and maintenance, accumulated pollutants can cause flooding problems and can be discharged to waterways. Routine inspection and maintenance of storm drain system structures is necessary to ensure that they are functioning properly.</p>
C.3.b	<p><u>Treatment Control BMP Maintenance.</u> Treatment control BMPs such as storm drain inserts, infiltration trenches, infiltration basins, and hydrodynamic separators must be regularly maintained in order to prevent the release of pollutants trapped within the device and to ensure the BMP continues to treat stormwater as designed.</p>
C.3.c	<p><u>Illicit Discharges and Connections.</u> Illicit connections (indoor or outdoor) to the MS4, and illegal dumping in the streets and in the storm drain system, are among the largest contributors to water pollution. The exposed open flood control channels and tunnels are often easy targets for illegal dumping and trash disposal. Illegal discharges or connections should be reported and removed as soon as possible.</p>
<i>Category D: Specific Operations and Activities</i>	
D.1	<p><u>Accident and Medical Emergency Response.</u> Emergency medical technicians respond to vehicle accidents and emergency situations that occur on roadways at businesses and at homes. Discharges of biohazardous materials and debris may occur.</p>
D.2	<p><u>Animal Grooming and Washing.</u> Grooming and washing of pets or large animals can result in discharges of cleaning and pest control products, medications, fur, and sediment.</p>
D.3	<p><u>Animal Keeping and Feeding.</u> Animal facilities typically increase the density of horses or livestock per acre, leading to high volumes of manure production and increased traffic on existing vegetated areas. Often compacted, bare soil is preferable for exercise rings and corrals. In addition, older facilities may be designed around or next to a waterway. These factors can increase the chances of manure, bedding, and other related wastes contaminating runoff as it leaves the site.</p>

PGA Reference	<p style="text-align: center;">Attachment 5.4. Pollutant Generating Activities for Municipal Sources</p>
D.4	<p><u>Abrasive Blasting.</u> Abrasive blasting is a method of propelling an abrasive material against a surface under high pressure to smooth a rough surface, roughen a smooth surface, shape a surface, or remove surface contaminants. Abrasive material is propelled using a compressed gas (usually air) or pressurized liquid (typically water). Abrasive blasting can introduce sediment, debris, paint, metals, wastewater and other pollutants into runoff.</p>
D.5	<p><u>Casting, Forging, or Forming.</u> Casting, forging and forming usually includes some type of convective process to heat materials at a certain temperature, so that they may be shaped or molded to form a product. Metals and organic chemicals are common pollutants associated with the activity.</p>
D.6	<p><u>Chemical Treatment.</u> This involves the application of chemicals to treat materials, which may alter or protect these materials for future use. Common chemical treatments are coating, plating, printing, inking and process treatment activities.</p>
D.7	<p><u>Control Burns.</u> Control burns are performed generally during the Spring & Summer months, prior to the fire season. These burns are performed to clear dead undergrowth and to create defensible space. Burn areas adjacent to waterways, ESAs, & conveyance systems should be buffered to reduce debris and contamination.</p>
D.8	<p><u>Cutting, Trimming, or Grinding.</u> These activities involve a reduction in unit size by removing a portion of the raw material used in the industrial process. This usually results in the generation of some type of waste product (typically metal, wood, or plastic) that must be removed post processing. (Does not include landscaping activities.)</p>
D.9	<p><u>Differential Settling Maintenance.</u> Differential settling takes place in closed landfills due to materials settling at different rates. Soil is necessary for proper maintenance and is used to fill settled areas. Sediment is a potential pollutant.</p>
D.10	<p><u>Dust and Particulate-Generating Activities.</u> Significant particulates originating from human activities such as soil disturbance, grading, excavating, burning, spraying, and other related construction and maintenance activities.</p>
D.11	<p><u>Fabrication.</u> Fabrication encompasses the assemblage of many intermediate or final products. Although metal is the primary medium, others can be used, such as plastics, foam, and concrete cement. This process usually incorporates a variety of activities including cutting, welding, grinding, shaping, trimming, sanding, painting, and coating.</p>
D.12	<p><u>Firefighting Field Training and Drills.</u> Training and drills are conducted at both fixed facilities and in open space environments. Activities involve the use of fire fighting equipment, hoses, water, fire retardants, and fire suppressing foam. Activities may create potential discharges of burn debris, chemicals, sediment, and litter.</p>
D.13	<p><u>Fire Access Roads / Fire Break Creation and Maintenance.</u> Fire access roads and fire breaks are located throughout the County, in both developed and undeveloped areas. Activities include clearing and grading of dirt 'roads' to create a fire break or provide access to fire fighting equipment.</p>
D.14	<p><u>Fire Hydrant, Tank, and Hose Testing and Maintenance.</u> Fire hydrants, tanks, and hoses are tested and maintained by Firefighters to ensure proper operation. The hydrant structure receives routine maintenance aside from flushing, and may also require repairs due to deferred maintenance, vandalism, or vehicle accidents. This may include demolition, replacement, repairs, and painting. Discharge quantities of hydrant flushing vary but are generally in hundreds of gallons, at a high velocity. Hoses and pipes are tested both in the field and at a station, and involve the flushing of water through the system to ensure proper operation. Runoff from these activities is not typically contained.</p>
D.15	<p><u>Floors, Mats, and Surface Cleaning.</u> Wash water from cleaning surfaces often contains pollutants associated with the objects or surfaces being cleaned as well as the cleaning compounds used. Surface cleaning activities that allow wash water to discharge to storm drains are not disposed of properly and pollute waterways. Cleaners labeled "biodegradable" and "nontoxic" may often be harmful to aquatic life, especially after cleaning surfaces that contain fats, oils, grease, metals, or other chemicals (such as herbicides, insecticides, pesticides, solvents, antifreeze, and fertilizers). Floors and mats capture droppings (food particles, oils and grease, etc.) and other pollutants such as bacteria and dirt.</p>

PGA Reference	<p style="text-align: center;">Attachment 5.4. Pollutant Generating Activities for Municipal Sources</p>
D.16	<u>Food Preparation</u> . Residual fats, oil, and grease are byproducts that are typically associated with food preparation. Pollutants from food waste and toxic chemicals in cleaning products and disinfectants can harm aquatic life and human health.
D.17	<u>Gas Extraction, Well Installation and Destruction</u> . Well installation and destruction for gas extraction systems requires surface disturbance and could produce trash/debris. Extracted soils, trash and debris should be disposed of properly.
D.18	<u>Leachate Collection System Maintenance</u> . New landfills are designed with a liner intended to prevent groundwater contamination. The leachate must be monitored and the system must be maintained to prevent groundwater contamination and contaminated runoff.
D.19	<u>Methane Recovery System Maintenance and Repair</u> . Decomposing waste and debris in a landfill generates methane gas. To recover the methane gas some landfills have methane extraction/collection systems in place. Portions of these systems are buried. Routine maintenance and repairs to the system require soil disturbance. Condensate from methane recovery systems can contribute metals or other substances to runoff.
D.20	<u>Mixing</u> . Mixing activities involve the addition two or more substances and incorporate some type of device to contain and stir the products being mixed. Mixing usually generates particulates or byproducts that can enter storm drains and waterways if not properly contained or cleaned.
D.21	<u>Painting or Coating Activities</u> . Painting and coating processes usually involve spraying, rolling or dipping, in which an epoxy or coating is applied to a surface. Painting and coating activities usually generate particulates or byproducts that can enter storm drains and waterways if not properly contained or cleaned.
D.22	<u>Pesticide or Other Chemical Product Formulation</u> . Product formulation may include many steps, factors and substances. Product formulation is the process in which a product is developed from other chemicals or raw materials to form an end product. The formulation could include, but is not limited to injecting, heating, cooling, and/or inserting chemicals and raw materials.
D.23	<u>Ramp and Runway Maintenance</u> . Airport ramps and runways must be kept free of the smallest amount of debris to prevent landing accidents. Ramp and runway repair are performed on occasion. Pollutants associated with runway maintenance are metals, hydrocarbons, and sediment.
D.24	<u>Recreational Uses</u> . Parks, closed landfills, and other properties may be used for recreation by the public.
D.25	<u>Sludge Removal and Disposal</u> . Solids are removed during the treatment process through screening and from digesters.
D.26	<u>Special Events</u> . Pollutants such as trash and litter may be generated by the general public through event participation. Parks, roads, airports, and business parking-lots are common areas used for events.
D.27	<u>Treatment Pond Maintenance</u> . Wastewater treatment ponds are used to treat municipal sanitary wastes.
D.28	<u>Wastewater Treatment</u> . Wastewater is received by way of pump station and pumped into the treatment facilities to be treated. Chemicals and air are introduced through a variety of mechanisms to treat wastewater.
D.29	<u>Weed Abatement and Vegetation Clearing</u> . Weed abatement is performed prior to the fire season and includes the clearing of open space areas and river beds from weeds and invasive species. Examples would include arrundo, tamarisk, and pampas grass removal.
D.30	<u>Welding</u> . Welding is the process of binding metals together using a conductive method to heat the metals. Metal bi-products usually result from this application.

Facility/Property:

Date:

Your facility's self-inspection frequency is based on the site's Threat to Water Quality (TTWQ). To determine your facility's TTWQ, please fill out the checklist below for the number of activities that occur on-site that can generate pollutants. Then answer the following 19 questions to determine your TTWQ score and self-inspection frequency.

Table 1-1: Pollutant Generating Activities (PGA) Checklist

<i>Which of these Pollutant Generating Activities are conducted at your facility/property?</i>		
Load and unload materials?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Store materials outdoors?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Store liquid containers outdoors?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Store vehicles outdoors?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Store equipment and parts outdoors?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Handle, store, and/or dispose of hazardous waste?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Handle, store, and/or dispose of solid waste?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Handle, store, and/or dispose of food grease and oil?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Handle, store, and/or dispose of pet waste/manure?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Handle, store, and/or dispose of liquid waste?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Handle, store, and/or dispose of sanitary waste?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Handle, store, and/or dispose of green waste?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Handle, store, and/or dispose of recyclables/reusables ?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Conduct vehicle and equipment repair?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Change vehicle fluids?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Conduct parts replacement and repairs?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Wash vehicles?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Clean equipment?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Conduct floors, mats, and surface cleaning?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Conduct animal grooming and washing?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Fuel vehicles and/or equipment?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Conduct accident and medical emergency response?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Conduct animal feeding and grazing?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Conduct automobile painting?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Conduct abrasive blasting?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Conduct casting, forging, or forming?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Perform chemical treatment?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Conduct control burns?	<input type="checkbox"/> Yes	<input type="checkbox"/> No
Perform cutting, trimming, and grinding?	<input type="checkbox"/> Yes	<input type="checkbox"/> No

Attachment 5.5 – Threat to Water Quality Questionnaire

Facility/Property:

Date:

Threat-to-Water Quality (TTWQ) Questionnaire

1. How many pollutant generating activities (PGAs) occur at the facility/property (total from Table 1-1)?
 - a. < 6 – 1 point
 - b. 6-14 – 3 points
 - c. 15-24 – 5 points
 - d. > 25 – 10 points
2. Does the facility complete and record their self-inspections on a timely and thorough basis?
 - a. Yes, always – 1 point
 - b. Usually – 3 points
 - c. Not always – 5 points
3. Are employees trained annually on stormwater and pollution prevention?
 - a. All applicable staff– 1 point
 - b. Some applicable staff – 3 points
 - c. None – 5 points
4. Is the property within the floodplain or floodway?
 - a. No – 1 point
 - b. Partially – 3 points
 - c. Yes – 5 points
5. What is the approximate impervious drainage area of your facility (including drainage from roofs, paved areas, roads, parking lots, etc)?
 - a. < 5,000 sq ft – 1 point
 - b. Around 5,000 sq ft – 3 points
 - c. > 5,000 sq ft – 5 points
6. Does the impervious surface runoff discharge to a storm drain or receiving water body (i.e. river, creek, lake, natural drainage)?
 - a. No – 1 point
 - b. Yes – 5 points
7. Does the impervious surface drain to an Environmentally Sensitive Area (ESA)?
 - a. No – 1 point (**if no, go to question 8**)
 - b. Yes – 5 points
- 7.a. What is the property distance to an ESA?
 - a. > 200ft – 1 point
 - b. < 200ft – 3 points
 - c. Within ESA– 5 points
8. What volume of trash/debris does the facility grounds generate/receive/collect?
 - a. Light: ≤ 55 gallon drum weekly – 1 point
 - b. Moderate: > 55 gallon drum weekly – 5 points
 - c. Heavy: > 1 dumpster weekly – 10 points
9. Does the facility have a history of spills or leaks within the past 3 years?
 - a. No – 1 point
 - b. No major spills and only a few small spills – 3 points
 - c. No major spills and several small spills – 5 points
 - d. Major spill on record – 10 points

(continued on next page)

Facility/Property:

Date:

10. Does the property have areas of erosion?
 - a. None, or erosion control best management practices are in place – 1 point
 - b. Some, or partial control of erosion – 5 points
 - c. Many, and minimal erosion control – 10 points
11. Are non-stormwater discharges (example: irrigation runoff) either eliminated or controlled?
 - a. Yes – 1 point
 - b. Partially – 3 points
 - c. No – 5 points
12. Is hazardous waste generated at the facility?
 - a. No – 1 point
 - b. Minor, infrequent amounts – 3 points
 - c. Regularly – 5 points
13. Does the facility have pollution prevention programs in place?
 - a. Yes – 1 point
 - b. Plan to implement soon – 3 points
 - c. No – 5 points
14. Does the facility implement stormwater BMPs as required?
 - a. Yes – 1 point
 - b. Sometimes – 3 points
 - c. No – 5 points
15. Are the source control BMPs (sweeping, drip pans, fiber rolls) well maintained/performed on a regular basis?
 - a. Yes – 1 point
 - b. Partially – 5 points
 - c. No – 10 points
16. Are the storm drain system and/or any treatment control BMPs (such as oil water separators, detention basins, vegetated swales, filter inserts, gabions, permeable pavement, etc) regularly inspected and maintained?
 - a. N/A – 0 points
 - b. Yes – 1 point
 - c. Occasionally – 5 points
 - d. No – 10 points
17. During self-inspections, are corrections made in a timely manner to resolve issues?
 - a. Yes – 1 point
 - b. Sometimes – 3 points
 - c. No – 5 points
18. After an audit, has a follow-up site visit been required by the WPP auditors within the past three (3) years?
 - a. No, found in compliance – 0 points
 - b. Only minor corrections have been required via picture report – 3 points
 - c. Yes, once – 5 points
 - d. Yes, more than once – 10 points
19. Has the facility/property received a Past-Due Notice from WPP in the past 3 years regarding any pending corrective action(s)?
 - a. No corrective actions have been requested – 0 points
 - b. No – 1 point
 - c. Yes, once – 3 points
 - d. Yes, more than once – 5 points

(continued on next page)

Facility/Property:

Date:

Total the points for each question answered above. Record your score below.

TOTAL: _____

Scoring

Under 28 = **Low** Threat to Water Quality (TTWQ). At a minimum, inspect **annually**

28-62 = **Medium** TTWQ. At a minimum, inspect **semi-annually** (once every 6 months)

63 and above = **High** TTWQ. At a minimum, inspect **quarterly**

Facility self-inspection schedules are determined by this Threat to Water Quality (TTWQ) questionnaire. According to the TTWQ questionnaire results, this facility conducts self-inspections:

- Annually** **Semi-Annually** **Quarterly**

Disclaimer: DPW WPP stormwater auditors must approve the TTWQ self-inspection frequency and have the authority to raise or lower the frequency based on compliance history.

Notes:

Attachment 5.6 – Residential Best Management Practice Requirements

Attachment 5.6 – BMP Requirements and Recommendations for Residential Sources

- A. Key Definitions**
- B. Watershed Protection Ordinance (WPO) Excerpts Applicable to Residential Dischargers**
- C. BMP Requirements and Options for Specific Residential Pollutant-generating Activities (PGAs)**

A. Key Definitions

“Best Management Practices” (BMPs) shall have the same meaning as defined in the NPDES Order. Best management practices may include any type of pollution prevention and pollution control measure that achieves compliance with this chapter.

“Discharge”, when used as a verb, means to allow pollutants to directly or indirectly enter stormwater, or to allow stormwater or non-stormwater to directly or indirectly enter the stormwater conveyance system or receiving waters, from an activity or operations which one owns or operates. When used as a noun, "discharge" means the pollutants, stormwater or non-stormwater that are discharged.

“Discharger” means any person or entity engaged in activities or operations or owning facilities, from which an allowed non-stormwater discharge to the stormwater conveyance system may or does originate or which will or may result in pollutants entering stormwater, the stormwater conveyance system, or receiving waters or the owners of real property on which such activities, operations or facilities are located, except that a local government or public authority is not a discharger as to activities conducted by others in public rights of way.

“Feasible” means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, and technological factors as determined in the sole discretion of the County. Feasibility may be limited in this Chapter to eliminate consideration of economic, environmental and other factors as, for example, where feasibility is specifically defined as technological feasibility.

“Illicit connection” means any man-made conveyance or drainage system through which non-stormwater or pollutants in water, not authorized by an NPDES permit or the NPDES Order are discharged or may be discharged to the stormwater conveyance system.

“Maximum extent practicable” (MEP) shall have the same meaning as defined in the NPDES Order.

“Non-stormwater” means all discharges to and from the stormwater conveyance system that do not originate from precipitation.

“Pollutant” means any agent that may cause, potentially cause, or contribute to the degradation of water quality such that a condition of pollution or contamination is created or aggravated.

“Pollution prevention” means the practices and processes that reduce or eliminate the generation of pollutants such as the use of smaller quantities of toxic materials or substitution of less toxic materials; changes to production processes to reduce waste; decreases in waste water flows; recycling of wastes as part of the production process; segregation of wastes, and treatment of wastes on site to decrease volume or toxicity.

“Receiving waters” shall mean waters of the United States.

“Residential discharger” means the occupant, owner, manager, caretaker, or owner’s association that owns, occupies, or has responsibility for a discharge from a single-family dwelling, a multiple-family dwelling, mobile home park, condominium complex, board-and-care house, or other housing structure or portion of a residential development from which the discharge originated.

“Stormwater conveyance system” means private and public drainage facilities other than sanitary sewers within the unincorporated area of San Diego County by which urban run-off may be conveyed to receiving waters, and includes but is not limited to roads, streets, constructed channels, aqueducts, storm drains, pipes, street gutters, inlets to storm drains or pipes, or catch basins.

“Stormwater Quality Management Plan” means a plan, submitted on a County form or in a County approved format with an application for a County permit or other County approval, identifying the measures that will be used for stormwater and non-stormwater management for a development project. There are two types of SWQMPs: a Standard SWQMP and a PDP SWQMP. A PDP SWQMP is required for all Priority Development Projects west of the Pacific/Salton Divide. Standard SWQMPs are required for all development projects east of the Pacific/Salton Divide and for all projects west of the Pacific/Salton Divide that are not Priority Development Projects.

“Water quality standards” means those regionally determined beneficial uses and water quality objectives in applicable water quality control and basin plans, together with anti-degradation policies that serve as water quality standards under the Clean Water Act.

B. Watershed Protection Ordinance (WPO) Excerpts Applicable to Residential Dischargers

Key sections of the Watershed Protection Ordinance (WPO) with applicability to Residential Dischargers are provided below. The WPO is provided in its entirety in Attachment 2.2.

SEC. 67.804. DISCHARGE PROHIBITIONS.

(a) It is unlawful for any person to discharge or cause the discharge of pollutants or non-stormwater directly or indirectly into the stormwater conveyance system or receiving waters, except as set forth in section 67.805 or as otherwise authorized by law.

(b) It is unlawful for any person to construct, use or maintain a connection to the stormwater conveyance system that discharges any matter other than stormwater, except as set forth in Section 67.805(a). This section expressly supersedes any previously issued permit or authorization granted by the County and expressly prohibits any previously legal non-conforming connection.

(c) It is unlawful to throw, deposit, leave, abandon, maintain, or keep materials or wastes on public or private lands in a manner and place where they may result in a discharge.

(d) Stormwater discharges from the site may not contain sediments in amounts in excess of the sediments that would have been discharged from the site in an undisturbed condition.

SEC. 67.805. EXEMPTIONS FROM DISCHARGE PROHIBITIONS.

The following are exempt from the prohibitions in section 67.804:

- (a) Any discharge or connection regulated under a valid facility-specific NPDES permit or non-stormwater discharges exempted pursuant to Section II.E.2 of the NPDES Order, provided that the discharge or connection is in compliance with all relevant permit conditions and the requirements of the NPDES Order to the satisfaction of the County or Regional Water Quality Control Board.
- (b) Discharges of non-stormwater to the stormwater conveyance system covered by NPDES Permit No. CAG919001 (Order No. R9-2007-0034, or subsequent order) for discharges to San Diego Bay, or NPDES Permit No. CAG919002 (Order No. R9-2008-0002, or subsequent order) for discharges to surface waters other than San Diego Bay meeting the requirements enumerated below are allowed unless determined by the County or RWQCB to be a source of pollutants to receiving waters:
 - (1) Uncontaminated pumped ground water;
 - (2) Discharges from foundation drains if the system is designed to be located at or below the groundwater table to actively or passively extract groundwater during any part of the year;
 - (3) Water from crawl space pumps; and
 - (4) Water from footing drains if the system is designed to be located at or below the groundwater table to actively or passively extract groundwater during any part of the year.

- (c) Non-stormwater discharges from water line flushing and water main breaks to the stormwater conveyance system are allowed provided the discharge is covered by NPDES Permit No. CAG679001 (Order No. R9-2010-003, or subsequent order) unless determined by the County or RWQCB to be a source of pollutants to receiving waters. This exemption does not cover discharges from recycled or reclaimed water lines unless covered by a separate NPDES permit.
- (d) Discharges of non-stormwater to the stormwater conveyance system meeting the requirements enumerated below are allowed unless determined by the County or RWQCB to be a source of pollutants to receiving waters:
- (1) Diverted stream flows;
 - (2) Rising ground waters;
 - (3) Uncontaminated ground water infiltration to stormwater conveyance system;
 - (4) Springs;
 - (5) Flows from riparian habitats and wetlands;
 - (6) Discharges from potable water sources;
 - (7) Discharges from foundation drains where the system is designed to be located above the groundwater table at all times of the year, and the system is only expected to discharge non-stormwater under unusual circumstances; and
 - (8) Discharges from footing drains where the system is designed to be located above the groundwater table at all times of the year, and the system is only expected to discharge non-stormwater under unusual circumstances.
- (e) Discharges of non-stormwater to the stormwater conveyance system as enumerated below are allowed unless determined by the County or RWQCB to be a source of pollutants to receiving waters:
- (1) Air conditioning condensation
 - (A) Whenever feasible, the discharge of air conditioning condensation shall be directed to landscaped areas, pervious surfaces, or to the sanitary sewer.
 - (2) Individual residential vehicle washing at a residence in accordance with Section 67.807(b)
 - (A) Whenever feasible, the discharge of wash water shall be directed to landscaped areas or other pervious surfaces; and
 - (B) The amount of water, washing detergent and other vehicle wash products used shall be the minimum amount necessary to completely wash the vehicle. This requirement shall be deemed violated if visible soap scum, oil sheen, or other by-products of residential vehicle washing reach the gutter or other drainage conveyance device in front of the residence where the vehicle is being washed.

(3) Dechlorinated swimming pool discharges

- (A) Residual chlorine from swimming pools and fountains must be eliminated prior to discharging to the stormwater conveyance system or receiving waters;
 - (B) Filter backwash, acid-wash water (pH <7.2 and > 8.0), and algaecide-treated pool water shall be prohibited from discharge to the stormwater conveyance system or receiving water; and
 - (C) The discharge of saline swimming pool water must be directed to the sanitary sewer, landscaped areas, or other pervious surfaces that can accommodate the volume of water, unless the saline swimming pool water can be discharged via a pipe or concrete channel directly to a naturally saline water body (e.g. Pacific Ocean).
- (f) Firefighting discharges to the stormwater conveyance system are only prohibited if determined to be a significant source of pollutants to receiving waters by the County or RWQCB. Firefighting discharges to the stormwater conveyance system not identified as a significant source of pollutants to receiving waters are allowed provided they meet the following requirements:

(1) Non-emergency firefighting discharges

- (A) Building fire suppression system maintenance discharges (e.g. sprinkler line flushing) to the stormwater conveyance system are prohibited unless BMPs are implemented to prevent pollutants associated with such discharges from entering the stormwater conveyance system.
- (B) Non-emergency firefighting discharges (i.e., discharges from controlled or practice blazes, firefighting training, and maintenance activities not associated with building fire suppression systems) must be addressed by a program developed and implemented by the County, to reduce or eliminate pollutants in such discharges from entering the stormwater conveyance system.

(2) Emergency firefighting discharges

- (A) The development and implementation of BMPs to reduce or eliminate pollutants in emergency firefighting discharges to the stormwater conveyance system and receiving waters is encouraged, but not required. Notwithstanding the foregoing, the County may require the use of BMPs for firefighting discharges when determined by the authorized enforcement official to be necessary to eliminate or reduce the discharge of pollutants to the stormwater conveyance system or receiving waters. As applicable, required BMPs may include those described in Sections 67.806 and 67.808. Any BMPs that interfere with immediate emergency response operations or impact public health and safety need not be used.

- (g) In the event that any non-stormwater discharge identified in Section 67.805 (a) through (f) is determined to be a source of pollutants to receiving waters, it may only be allowed to continue within an applicable Watershed Management Area if controls set forth by the County in the corresponding Water Quality Improvement Plan are implemented to the satisfaction of the RWQCB.
- (h) Discharges exempted from compliance by operation or law; any permits, orders or decisions issued by the RWQCB; and any waivers, or renewals of waivers issued by the RWQCB such as those covered by Regional Board Order No. R9-2014-0041, adopted June 26, 2014.

67.806 GENERAL BEST MANAGEMENT PRACTICE REQUIREMENTS.

The following requirements apply to all dischargers:

- (a) All dischargers must perform and maintain the following BMPs:
 - (1) Prior to the rainy season, remove or secure any significant accumulations of eroded soils from slopes previously disturbed by landscaping, clearing or grading, if those eroded soils could otherwise enter and impact the stormwater conveyance system or receiving waters during the rainy season.
 - (2) Implement, as practicable, those stormwater pollution prevention practices that are generally recognized in that discharger's industry or business as being effective and economically advantageous.
 - (3) Eliminate illicit connections.
 - (4) Protect, from erosion, those slopes that have been disturbed by clearing, grading, or landscaping and are more than three feet in height or steeper than 3:1 (run-to-rise). Slope protection shall occur prior to the first rainy season following the clearing, grading or landscaping of the slope and continuously thereafter.
 - (5) Store all materials and wastes with the potential to pollute stormwater in a manner that prevents contact with rainfall, run-on, run-off, and wind dispersal.
 - (6) Locate, configure, and manage stockpiles of soil, green waste and compost to prevent the release of materials to the stormwater conveyance system or receiving waters.
 - (7) Use all materials with the potential to pollute runoff, such as outdoor cleaning and maintenance products, fertilizers, pesticides and herbicides in accordance with label directions. No such product may be disposed of or rinsed into receiving waters or the stormwater conveyance system.
 - (8) Use dry methods such as sweeping, vacuuming, raking, and application of absorbents to cleanup pollutants, unless wet cleanup methods are otherwise allowed in this Chapter.
- (b) BMPs shall be maintained to function as intended and designed. BMPs which fail shall be repaired or replaced as soon as it is safe or practicable. If BMPs fail notwithstanding their intent or design, the BMPs shall be modified or upgraded to prevent any further failure in the same or similar circumstances.

(c) Notwithstanding the provisions of this chapter, an authorized enforcement official may require a discharger to prepare and submit a Stormwater Pollution Prevention Plan (SWPPP) for approval by the authorized enforcement official as follows:

(1) If the discharger fails to comply with any applicable requirement of this Chapter after one or more written notifications or other enforcement action because BMPs have been determined to be inadequate or are not being adequately maintained.

(2) The activity at issue is considered a significant source of pollutants or a source of a non-stormwater discharge in excess of what is allowed by this Chapter to the stormwater conveyance system or receiving waters. Any discharger required to submit and to obtain approval of a SWPPP shall install, implement and maintain the BMPs specified in the approved SWPPP.

(3) The SWPPP shall identify the BMPs or corrective measures that will be used by the discharger to prevent or control pollution of stormwater to the MEP and bring the non-stormwater discharge into conformance with the requirements of this Chapter. If a facility discharges non-stormwater to ground water, the facility shall obtain an RWQCB permit as required by the State Water Code, and shall describe the requirements of that permit in the SWPPP.

(g) Notification of spills, releases and illicit discharges.

(1) Spills, releases, or discharges of pollutants or non-stormwater in excess of what is allowed by this Chapter to receiving waters or to the stormwater conveyance system shall be reported by the discharger as required by all applicable state and federal laws.

(2) Any such spills, releases or discharges with the potential to endanger health, safety or the environment shall be reported to the Director, Department of Public Works, within 24 hours after discovery of the spill, release or discharge. Spills that have been completely contained and cleaned up on-site are not considered significant unless they pose a threat to human health or safety.

(3) If safe to do so, necessary actions shall be taken to contain and minimize the spill, release or discharge of any pollutants to the MEP and bring any allowed discharge of non-stormwater into compliance with this Chapter.

(h) Sampling, Testing, Monitoring, and Reporting.

(1) Dischargers shall perform the sampling, testing, monitoring and reporting required by this Chapter.

(2) An authorized enforcement official may order a discharger to conduct testing or monitoring and to report the results to the County if one or more of the following occurs:

(A) The authorized enforcement official determines that testing or monitoring is needed to determine whether BMPs are effectively preventing or reducing pollution in stormwater to the MEP or necessary to allow for the continued discharge of non-stormwater under the limited circumstances permitted by this Chapter.

(B) Testing or monitoring is needed to determine whether the facility is a significant source of pollutants or of otherwise prohibited non-stormwater discharges to receiving waters or the stormwater conveyance system.

(C) The authorized enforcement official determines that testing or monitoring is needed to assess the impacts of a discharge on the public's health or safety or the environment.

(D) A discharge has not been eliminated after written notice by an authorized enforcement official.

(E) The RWQCB requires the County to provide any information related to the discharger's activities.

(3) Sampling, testing, or monitoring ordered pursuant to this Section may include one or more of the following:

(A) Visual monitoring of dry weather flows, wet weather erosion, discharge points, or conditions of BMPs.

(B) Visual monitoring of premises for spills or discharges.

(C) Laboratory analyses of discharges for pollutants.

(D) Background or baseline monitoring or analysis.

(E) Monitoring of receiving waters or sediments that may be affected by pollutant discharges by the discharger or by a group of dischargers including the discharger.

(4) The authorized enforcement official may direct the manner in which the results of required testing and monitoring are reported, and may determine that sampling, testing or monitoring may discontinue.

SEC. 67.807. ADDITIONAL MINIMUM BEST MANAGEMENT AND POLLUTION PREVENTION PRACTICES FOR RESIDENTIAL ACTIVITIES AND USES

Residential dischargers shall install, implement and maintain BMPs and implement pollution prevention practices, as follows:

(a) Motor Vehicle or Boat Repair and Maintenance.

(1) All repair and maintenance activities shall be performed under a permanent roof or other permanent cover, where feasible.

(2) All maintenance and repair activities conducted without cover or without BMPs to prevent discharges are prohibited during times of precipitation.

(3) Any release of fluids, including boat bilge water, during repair or maintenance shall be promptly contained and cleaned up. Any absorbent materials used shall be disposed of as required by law.

(4) Degreasing or pressure washing of engines and other parts is prohibited unless the liquid wastes are contained and properly disposed of as required by law.

(5) Automotive and boat materials and wastes shall be stored indoors, under cover, or in secure and watertight containers.

(b) Residential Motor Vehicle Washing.

(1) Individual motor vehicles shall be washed over porous surfaces such as lawns and gravel areas where feasible.

(2) Unused detergent solutions shall not be disposed of directly or indirectly into the stormwater conveyance system or receiving waters. Disposal to the sanitary sewer, such as a sink, toilet or floor drain or to a porous surface, where allowed by this chapter, is required.

(3) The use of "hose off" or single use engine degreasing chemicals is prohibited, unless captured and disposed of properly.

(4) Motor vehicle washing other than individual residential motor vehicle washing is prohibited.

(5) Degreasing or pressure washing of engines and other parts is prohibited unless the liquid wastes are contained and properly disposed of as required by law.

(c) Motor Vehicle Parking.

(1) Residential dischargers shall remove excessive accumulations of oil and grease deposited by vehicles they own from parking areas, using dry cleanup methods such as absorbents, scraping, vacuuming, sweeping, mop and bucket.

(2) Residential dischargers shall move vehicles from streets when notified to allow street cleaning.

(d) Home and garden care activities and product use.

(1) Residential dischargers or their contractors shall adjust irrigation systems to avoid runoff that causes discharges to the stormwater conveyance system or receiving waters.

(2) Residential dischargers or their contractors shall clean up and properly dispose of spills from gardening chemicals, fertilizers or soils to non-porous surfaces.

(3) Lawn and garden care products shall be stored in closed, labeled containers, such as in covered areas, off the ground, or under protective tarps, and in a manner that will not lead to a discharge.

(4) Disposal of household hazardous waste directly or indirectly to the trash or to the street, gutter or storm drain is prohibited.

(e) Home care and maintenance.

(1) Cleaning of painting equipment in or over streets, sidewalks, gutters, or yard drains is prohibited.

(2) Action shall be taken to minimize and contain all spills of hazardous materials, if it is safe to do so.

(3) Household hazardous materials shall be stored indoors or under cover, and in closed and labeled containers.

(f) Manure and pet waste management.

(1) Where practicable, all areas, where livestock, horses or other large animals are confined, shall be bermed or curbed to contain animal waste where it is produced or managed to prevent discharge of waste or waste byproducts to the stormwater conveyance system or receiving waters. If compliance is not practicable, manure shall be cleaned up at least twice weekly and must be composted or properly stored prior to disposal.

(2) Wastes from small animals (e.g., dogs and cats) shall be cleaned up and properly disposed of at least weekly.

(3) Areas used for storing or composting manure shall be located, configured or managed to prevent run-off to stormwater conveyance system or receiving waters.

(g) Private sewer laterals and on-site wastewater systems.

(1) Private sewer laterals shall be cleaned, maintained and when necessary replaced to prevent seepage and spills. On-site wastewater systems shall be pumped, maintained and when necessary modified or replaced to prevent spills.

(2) Spills from private sewer laterals and on-site wastewater systems shall be contained and cleaned-up in a manner that minimizes any release of pollutants to the stormwater conveyance system or receiving waters.

(3) Any release from a private sewer lateral that enters the stormwater conveyance system or receiving waters shall be immediately reported to the County.

(4) Failed on-site wastewater systems shall be repaired or replaced.

C. BMP Requirements and Recommendations for Specific Residential Pollutant-generating Activities (PGAs)

Table 5.6.1 – Required and Recommended Best Management Practices (BMPs) by Pollutant-generating Activity

Pollutant Generating Activity	Best Management Practice
AUTOMOBILE AND BOAT	
Parking and storage	<p><u>WPO Section 67.807(c)</u></p> <ul style="list-style-type: none"> (1) Remove excess accumulations of oil and grease deposited by vehicles from parking areas, using dry cleanings methods (e.g., absorbents, scraping, vacuuming, sweeping, mop and bucket). (2) Move vehicles or boats from streets when notified to allow street cleaning.
Maintenance and repair	<p><u>WPO Section 67.807(a)</u></p> <ul style="list-style-type: none"> (1) Perform all repair and maintenance activity under a permanent roof or other permanent cover, where feasible. (2) All maintenance and repair activities conducted without cover or without BMPs to prevent discharges are prohibited during times of precipitation. (3) Promptly contain and clean up any release of fluids, including boat bilge water, during repair or maintenance. Dispose of any absorbent materials used as required by law. (4) Degreasing or pressure washing of engines and other parts is prohibited unless the liquid wastes are contained and properly disposed of as required by law.
Washing and cleaning	<p><u>WPO Section 67.805(e)(2)</u></p> <ul style="list-style-type: none"> (A) Whenever feasible, the discharge of wash water shall be directed to landscaped areas or other pervious surfaces; and (B) The amount of water, washing detergent and other vehicle wash products used shall be the minimum amount necessary to completely wash the vehicle. This requirement shall be deemed violated if visible soap scum, oil sheen, or other by-products of residential vehicle washing reach the gutter or other drainage conveyance device in front of the residence where the vehicle is being washed. <p><u>WPO Section 67.807(b)</u></p> <ul style="list-style-type: none"> (1) Wash individual motor vehicles over porous surfaces such as lawns and gravel areas, where feasible. (2) Do not directly or indirectly dispose of unused detergent solutions into the stormwater conveyance system or receiving waters. Disposal to the sanitary sewer, such as sink toilet or floor drain or to a porous surface is required. (3) Do not use "hose off" or single use engine degreasing chemicals unless captured and disposed of properly. (4) Washing of motor vehicles (other than individual residential motor vehicles) is prohibited. (5) Do not degrease or pressure wash engines and other parts the liquid wastes are contained and properly disposed of as required by law.

Pollutant Generating Activity	Best Management Practice
	<p><u>Recommended Pollution Prevention</u></p> <ul style="list-style-type: none"> • Use a commercial car washing facility instead of washing and cleaning automobiles in residential areas. • Use low toxic substitutes to wash and clean automobiles and boats. • Clean parts mechanically or pressure clean.
Material and waste storage	<p><u>WPO Section 67.807(a)(5)</u> Store automotive and boat material and wastes indoors, under cover, or in secure and watertight containers.</p>
Waste management and disposal	<p><u>WPO Section 67.807(d)(4)</u> Do not dispose of household hazardous waste directly or indirectly to the trash or to the street, gutter or storm drain.</p>
LAWN AND GARDEN	
Over-irrigation	<p><u>WPO Section 67.807(d)(1)</u> Adjust irrigation systems to avoid runoff that may cause a discharge to the storm drain.</p>
	<p><u>Recommended Pollution Prevention</u></p> <ul style="list-style-type: none"> • Adjust irrigation schedule according to seasonal changes.
Chemical product use (fertilizers, pesticides, and herbicides)	<p><u>WPO Section 67.807(d)(2)</u> Clean up and properly dispose of spills from gardening chemicals, fertilizers, or soil to non-porous surfaces.</p>
	<p><u>Recommended Pollution Prevention</u></p> <ul style="list-style-type: none"> • Use low-maintenance plants (native) that do not require fertilizer. • Use organic, slow-releasing, and/or low-toxic substitutes and use only when needed. Avoid using sprays. • Avoid applying chemicals prior to or during storm events. • Use fertilizer substitutes, such as mulch of leaves, bark, and composted manure and/or garden waste where it is not likely to get carried off into storm drains. • Use integrated pest management practices.
Materials and waste storage	<p><u>WPO Section 67.807(d)(3)</u> Store lawn and garden care products in closed, labeled containers, such as in covered areas, off the ground, or under protective tarps, and in a manner that will not lead to a discharge.</p>
Waste management and disposal	<p><u>WPO Section 67.807(d)(4)</u> Do not dispose of household hazardous waste directly or indirectly to the trash or to the street, gutter or storm drain.</p>
	<p><u>Recommended Pollution Prevention</u></p> <ul style="list-style-type: none"> • Compost green waste.

Pollutant Generating Activity	Best Management Practice
HOUSEHOLD AND HOME	
Painting	<p><u>WPO Section 67.807(e)(1)</u> Do not clean painting equipment in or over streets, sidewalks, gutters, or yard drains.</p>
Repair and maintenance	<p><u>WPO Section 67.807(e)(2)</u> Minimize and contain all spills of hazardous materials, if it is safe to do so.</p>
Outdoor cleaning	<p><u>Recommended Pollution Prevention</u></p> <ul style="list-style-type: none"> • Use dry methods (sweep, vacuum, etc.) to clean outdoor areas, such as sidewalks, driveways, and patios. • Divert wash water to landscaped or pervious surfaces using portable berms or sandbags. Remove and discard accumulated residual litter. • Protect storm drain inlets from run-off.
Pool, spa, and fountain care	<p><u>WPO Section 67.805(e)(3)</u></p> <p>(A) Residual chlorine from swimming pools and fountains must be eliminated prior to discharging to the stormwater conveyance system or receiving waters;</p> <p>(B) Filter backwash, acid-wash water (pH <7.2 and > 8.0), and algacide-treated pool water are prohibited from discharge to the stormwater conveyance system or receiving water; and</p> <p>(C) The discharge of saline swimming pool water must be directed to the sanitary sewer, landscaped areas, or other pervious surfaces that can accommodate the volume of water, unless the saline swimming pool water can be discharged via a pipe or concrete channel directly to a naturally saline water body (e.g. Pacific Ocean).</p>
	<p><u>Recommended Pollution Prevention</u></p> <ul style="list-style-type: none"> • Properly maintain pools, spas, and fountains to prevent the need for excessive toxic chemicals. • Never clean filters in the street, gutter, or storm drain. Rinse cartridge filters onto a dirt area and spade filter residue into the soil. Keep backwash discharges out of the street and storm drain. Backwash sand and diatomaceous earth filters onto a dirt area. Dispose of spent filter materials in the trash. • Dispose of backwash wastewater to the sanitary sewer, to a holding tank or settling pond, or by infiltration to the soil.
Materials and waste storage	<p><u>WPO Section 67.807(e)(3)</u> Store household hazardous materials indoors or under cover, and in closed and labeled containers.</p>
Waste management and disposal	<p><u>WPO Section 67.807(d)(4)</u> Do not directly or indirectly dispose of household hazardous waste to the trash or to the street, gutter or storm drain.</p>

Pollutant Generating Activity	Best Management Practice
PETS	
Pet waste disposal	<p><u>WPO Section 67.807(f)(2)</u> Wastes from small animals (e.g., dogs and cats) shall be picked up and disposed of at least weekly.</p> <p><u>Recommended Pollution Prevention</u></p> <ul style="list-style-type: none"> • Pick up waste around the home and during walks. • Properly dispose of waste into a covered receptacle immediately to prevent material from entering into the stormwater conveyance system or receiving waters. • Flush waste down the toilet where it is properly treated.
Pet care	<p><u>Recommended Pollution Prevention</u></p> <ul style="list-style-type: none"> • Bathe and clean pets indoors to allow wash water to drain into the sanitary sewer. • Wash pets over porous surfaces such as lawns and gravel areas. • Do not directly or indirectly dispose of unused detergent solutions to the stormwater conveyance system or receiving waters. Instead dispose of solutions to the sanitary sewer (e.g., through a sink, toilet or floor drain) or to a porous surface.
LIVESTOCK AND LARGE ANIMALS	
Manure management	<p><u>WPO Section 67.807(f)(1)</u> Where practicable, berm or curb all areas where livestock, horses or other large animals are confined to contain animal waste where it is produced, or manage waste in a manner that avoids a discharge to the stormwater conveyance system or receiving waters. If compliance is not practicable, clean up manure at least twice weekly and compost or properly store it prior to disposal.</p>
Manure disposal	<p><u>Recommended Pollution Prevention</u></p> <ul style="list-style-type: none"> • Dispose of manure in a covered waste receptacle.
Composting	<p><u>WPO Section 67.807(f)(2)</u> Locate, configure, or manage areas used to store or compost manure to prevent runoff to stormwater conveyance system or receiving waters.</p>

Jurisdictional Runoff Management Program

6.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION COMPONENT

6.1 Introduction

The overall goal of this Jurisdictional Runoff Management Program (JRMP) component is to establish a programmatic framework for the implementation of activities to minimize the impact of illicit discharges and connections on receiving waters and other environmental resources in the County of San Diego (County).

By eliminating these discharges and connections, the County is better able to protect and enhance the quality of these resources. The County has implemented a comprehensive program to effectively address these discharges, and a number of its program activities are described in this section.

Underlying requirements are set forth in the County's Watershed Protection Ordinance (WPO) Section 67.801 et seq.

6.2 Non-Stormwater Discharges

The 2013 MS4 Permit section E.2.a. requires that the County address all non-stormwater discharges as illicit discharges unless such discharges are either authorized by a separate National Pollutant Discharge Elimination System (NPDES) permit or identified as a category of non-stormwater discharges or flows that are addressed by other requirements (E.2.a.(1-5)).

The categories of non-stormwater discharges or flows that are included in the 2013 MS4 Permit are summarized below.

6.2.1 Non-Stormwater Discharges Natural in Origin and Conveyance [E.2.a.(3)]

These discharges are addressed as illicit discharges only if the County or the San Diego Regional Water Quality Control Board (Regional Board) identifies the discharge as a source of pollutants to receiving waters. Natural sources infiltrating or entering the storm drain may include:

- a) Diverted stream flows
- b) Rising ground waters
- c) Uncontaminated ground water infiltration to MS4s
- d) Springs
- e) Flows from riparian habitats and wetlands
- f) Discharges from potable water sources
- g) Discharges from foundation drains¹
- h) Discharges from footing drains¹

¹ Permit section E.2.a.(3) only applies to this category of non-stormwater discharge if the system is designed to be located above the groundwater table at all times of the year, and the system is only expected to discharge non-stormwater under unusual circumstances.

Jurisdictional Runoff Management Program

6.2.2 Other Non-Stormwater Discharges [E.2.a.(1)-(2) and E.2.a.(4)(a)-(c)]

In general, these discharges are authorized by a separate NPDES permit or are required to be controlled by other means. They include the following:

- (1) Discharge is covered under *General Waste Discharge Requirements for Discharges from Temporary Groundwater Extraction and Similar Waste Discharges to San Diego Bay, Tributaries Thereto under Tidal Influence, and Storm Drains or Other Conveyance Systems Tributary Thereto* (NPDES Permit No. CAG919001) or *General Waste Discharge Requirements for Discharges from Groundwater Extraction and Similar Discharges to Surface Waters within the San Diego Region Except for San Diego Bay* (NPDES Permit No. CAG919002):²
 - a) Uncontaminated pumped ground water
 - b) Discharges from foundation drains³
 - c) Water from crawl space pumps
 - d) Water from footing drains³
- (2) Discharge has coverage under *General Waste Discharge Requirements for the Discharges of Hydrostatic Test Water and Potable Water to Surface Waters and Storm Drains or Other Conveyance Systems within the San Diego Region* (NPDES Permit No. CAG 679001).⁴
- (3) Discharge is to be controlled through statute, ordinance, permit, contract, order, or similar means:⁵
 - a) Air conditioning condensation
 - b) Individual residential car washing
 - c) Dechlorinated swimming pool discharges

6.2.3 Stormwater Discharge Categories Determined to be Significant Source of Pollutants

The County has not made a categorical determination that any of the non-stormwater discharge types listed in 2013 MS4 Permit sections E.2.a.(1)-(4) is a significant source of pollutants to waters of the U.S.

² Addressed as illicit discharge only if discharge does not have coverage [E.2.a.(1)]

³ Permit section E.2.a.(1) only applies to this category of non-stormwater if the system is designed to be located at or below the groundwater table to actively or passively extract groundwater during any part of the year.

⁴ Addressed as illicit discharge only if discharge does not have coverage [E.2.a.(2)]

⁵ Addressed as illicit discharge only if discharge is not controlled by Permit requirements via these means [E.2.a.(4)(a)-(c)]

Jurisdictional Runoff Management Program

6.2.4 Prohibited Non-Stormwater Discharge Categories

The County has not categorically prohibited any of the non-stormwater discharge types listed in 2013 MS4 Permit sections E.2.a.(1)-(4).

6.2.5 Control Measures for Allowable Non-Stormwater Discharges

The County adopted an updated version of the WPO in June of 2015 to address changes in the 2013 MS4 Permit. Sections 67.804 and 67.805 of the County's WPO establish discharge prohibitions for the County Unincorporated area, as well as the conditions under which some non-stormwater discharges may be allowed.

Section 67.804 establishes the following prohibitions:

- (a) It is unlawful for any person to discharge or cause the discharge of pollutants or non-stormwater directly or indirectly into the stormwater conveyance system or receiving waters, except as set forth in Section 67.805 or as otherwise authorized by law;
- (b) It is unlawful for any person to construct, use or maintain a connection to the stormwater conveyance system that discharges any matter other than stormwater, except as set forth in Section 67.805(a). This Section expressly supersedes any previously issued permit or authorization granted by the County and expressly prohibits any previously legal non-conforming connection;
- (c) It is unlawful to throw, deposit, leave, abandon, maintain, or keep materials or wastes on public or private lands in a manner and place where they may result in a discharge; and
- (d) Stormwater discharges from the site may not contain sediments in amounts in excess of the sediments that would have been discharged from the site in an undisturbed condition.

Section 67.805 sets forth the following exemptions from the prohibitions in section 67.804:

- (a) Any discharge or connection regulated under a valid facility-specific NPDES permit or non-stormwater discharges exempted pursuant to Section II.E.2. of the NPDES Order, provided that the discharge or connection is in compliance with all relevant permit conditions and the requirements of the NPDES Order to the satisfaction of the County or [Regional Board].
- (b) Discharges of non-stormwater to the stormwater conveyance system covered by NPDES Permit No. CAG919001 (Order No. R9-2007-0034, or subsequent order) for discharges to San Diego Bay, or NPDES Permit No. CAG919002 (Order No. R9-2008-0002, or subsequent order) for discharges to surface waters other than San Diego Bay meeting the requirements enumerated below are allowed unless determined by the County or [Regional Board] to be a source of pollutants to receiving waters:
 - (1) Uncontaminated pumped ground water;

Jurisdictional Runoff Management Program

- (2) Discharges from foundation drains if the system is designed to be located at or below the groundwater table to actively or passively extract groundwater during any part of the year;
 - (3) Water from crawl space pumps; and
 - (4) Water from footing drains if the system is designed to be located at or below the groundwater table to actively or passively extract groundwater during any part of the year.
- (c) Non-stormwater discharges from water line flushing and water main breaks to the stormwater conveyance system are allowed provided the discharge is covered by NPDES Permit No. CAG679001 (Order No. R9-2010-003, or subsequent order) unless determined by the County or [Regional Board] to be a source of pollutants to receiving waters. This exemption does not cover discharges from recycled or reclaimed water lines unless covered by a separate NPDES permit.
- (d) Discharges of non-stormwater to the stormwater conveyance system meeting the requirements enumerated below are allowed unless determined by the County or [Regional Board] to be a source of pollutants to receiving waters:
- (1) Diverted stream flows;
 - (2) Rising ground waters;
 - (3) Uncontaminated ground water infiltration to stormwater conveyance system;
 - (4) Springs;
 - (5) Flows from riparian habitats and wetlands;
 - (6) Discharges from potable water sources;
 - (7) Discharges from foundation drains where the system is designed to be located above the groundwater table at all times of the year, and the system is only expected to discharge non-stormwater under unusual circumstances; and
 - (8) Discharges from footing drains where the system is designed to be located above the groundwater table at all times of the year, and the system is only expected to discharge non-stormwater under unusual circumstances.
- (e) Discharges of non-stormwater to the stormwater conveyance system as enumerated below are allowed unless determined by the County or [Regional Board] to be a source of pollutants to receiving waters:
- (1) Air conditioning condensation
 - (A) Whenever feasible, the discharge of air conditioning condensation shall be directed to landscaped areas, pervious surfaces, or to the sanitary sewer.

Jurisdictional Runoff Management Program

- (2) Individual residential vehicle washing at a residence in accordance with Section 67.807(b)
 - (A) Whenever feasible, the discharge of wash water shall be directed to landscaped areas or other pervious surfaces; and
 - (B) The amount of water, washing detergent, and other vehicle wash products used shall be the minimum amount necessary to completely wash the vehicle. This requirement shall be deemed violated if visible soap scum, oil sheen, or other by-products of residential vehicle washing reach the gutter or other drainage conveyance device in front of the residence where the vehicle is being washed.
- (3) Dechlorinated swimming pool discharges
 - (A) Residual chlorine from swimming pools and fountains must be eliminated prior to discharging to the stormwater conveyance system or receiving waters;
 - (B) Filter backwash, acid-wash water (pH <7.2 and > 8.0), and algacide-treated pool water shall be prohibited from discharge to the stormwater conveyance system or receiving water; and
 - (C) The discharge of saline swimming pool water must be directed to the sanitary sewer, landscaped areas, or other pervious surfaces that can accommodate the volume of water, unless the saline swimming pool water can be discharged via a pipe or concrete channel directly to a naturally saline water body (e.g. Pacific Ocean).
- (f) Firefighting discharges to the stormwater conveyance system are only prohibited if determined to be a significant source of pollutants to receiving waters by the County or [Regional Board]. Firefighting discharges to the stormwater conveyance system not identified as a significant source of pollutants to receiving waters are allowed provided they meet the following requirements:
 - (1) Non-emergency firefighting discharges
 - (A) Building fire suppression system maintenance discharges (e.g. sprinkler line flushing) to the stormwater conveyance system are prohibited unless BMPs are implemented to prevent pollutants associated with such discharges from entering the stormwater conveyance system.
 - (B) Non-emergency firefighting discharges (i.e., discharges from controlled or practice blazes, firefighting training, and maintenance activities not associated with building fire suppression systems) must be addressed by a program developed and implemented by the County, to reduce or

Jurisdictional Runoff Management Program

eliminate pollutants in such discharges from entering the stormwater conveyance system.

- (2) Emergency firefighting discharges
 - (A) The development and implementation of BMPs to reduce or eliminate pollutants in emergency firefighting discharges to the stormwater conveyance system and receiving waters is encouraged, but not required. Notwithstanding the foregoing, the County may require the use of BMPs for firefighting discharges when determined by the authorized enforcement official to be necessary to eliminate or reduce the discharge of pollutants to the stormwater conveyance system or receiving waters. As applicable, required BMPs may include those described in Sections 67.806 and 67.808. Any BMPs that interfere with immediate emergency response operations or impact public health and safety need not be used.
- (g) In the event that any non-stormwater discharge identified in Section 67.805 (a) through (f) is determined to be a source of pollutants to receiving waters, it may only be allowed to continue within an applicable Watershed Management Area if controls set forth by the County in the corresponding Water Quality Improvement Plan are implemented to the satisfaction of the [Regional Board].
- (h) Discharges exempted from compliance by operation or law; any permits, orders or decisions issued by the [Regional Board]; and any waivers, or renewals of waivers issued by the [Regional Board] such as those covered by Regional Board Order No. R9-2014-0041, adopted June 26, 2014.

None of the exemptions of Section 67.805 are absolute. Any discharge category that the authorized enforcement official determines is a significant source of pollutant to waters of the United States will be prohibited from entering the stormwater conveyance system or receiving waters, or the discharger required to implement additional Best Management Practices (BMPs) to reduce pollutants in that discharge to the Maximum Extent Practicable (MEP), using the best available technology. The authorized enforcement official may issue a written notice to the discharger imposing a schedule to cease the discharge or implement the additional BMPs.

6.2.6 Program for Emergency and Non-Emergency Firefighting Flows

Per 2013 MS4 Permit Section E.2.a.(5), emergency firefighting flows (i.e., flows necessary for the protection of life or property) are addressed as illicit discharges only if the County or the Regional Board has identified the discharge as a source of pollutants to receiving waters.

The County must, however, address both emergency and non-emergency firefighting flows by implementing a program to reduce or eliminate pollutants associated with these discharges. Non-emergency firefighting flows include building fire suppression system maintenance discharges, discharges from controlled or practice blazes, and other maintenance activities.

This program is described in Section 5.3.12.

Jurisdictional Runoff Management Program

6.3 Prevent and Detect Illicit Discharges and Connections

The County is required to implement a program to prevent and detect illicit discharges and connections to the Municipal Separate Storm Sewer System (MS4). The County's program activities addressing this requirement are the core of the Illicit Discharge Detection and Elimination Component.

6.3.1 Development and Maintenance of Updated MS4 Drainage Area Map

The County is required to update and maintain an MS4 Drainage Area Map, per 2013 MS4 Permit section E.2.b.(1), and confirm its accuracy during field screening activities conducted to meet the requirements of 2013 MS4 Permit section E.2.c. The County's current MS4 Drainage Area map is provided as Attachment 6.1. This map will be updated as needed throughout the Permit term, based on any new information provided by field personnel and the County's Capital Improvements Program, to accurately depict the required elements.

6.3.2 Coordination with Upstream Entities to Prevent Illicit Discharges

When circumstances require it, the County will coordinate with upstream Copermitees and/or entities to prevent illicit discharges from upstream sources from reaching the MS4 within its jurisdiction.

6.3.3 County Staff and Contractor Reporting of Illicit Discharges and Connections

County field staff are trained to recognize illicit discharges so that, during their normal inspection or maintenance activities, they can identify signs of previous, current, or potential non-stormwater discharges and/or connections—or illegal dumping into the storm drain system. Once such incidents are discovered, the field staff notifies their respective supervisors so that the incidents can be validated, prioritized, and investigated in a timely manner (see Section 6.6). Obvious illicit discharges (i.e., color, odor, or significant exceedances of action levels) must be investigated immediately.

In addition, County contractors are required to assist in identification of illicit discharges and connections while conducting contracted activities.

6.3.4 Public Reporting of Illicit Discharges and Connections

In accordance with 2013 MS4 Permit section E.2.b.(3)(a), the County will continue to operate a public hotline to facilitate public reporting of illicit discharges or water quality impacts associated with discharges from residences, businesses, and other sources. This hotline is capable of receiving reports in both English and Spanish 24 hours a day seven days per week. The hotline receives calls from a toll-free Regional Stormwater Hotline (1-888-846-0800). All calls are answered by hotline operators, Monday through Friday, 8:00 a.m. - 5:00 p.m. A voice mail message is provided for 24-hour public access in both English and Spanish. Public reporting is also available by accessing the Project Clean Water website's Report Pollution page⁶, Accela Citizens Access web interface⁷, or by contacting the Department of Public Works (DPW),

⁶ www.projectcleanwater.org

⁷ <https://publicservices.sdcounty.ca.gov/citizenaccess/>

Jurisdictional Runoff Management Program

Watershed Protection Program (WPP) directly (watersheds@sdcountry.ca.gov). A link to this email address (watersheds@sdcountry.ca.gov) is displayed on the DPW Watershed Protection webpage.⁸ All complaint information received is forwarded to the Department of Public Works, Watershed Protection Program staff for routing to the appropriate departments or agencies for follow up and/or investigation.

This hotline number and the website addresses are distributed to the public via brochures, advertisements, and various other outreach methods to encourage them to report complaints. Through its education and outreach program, the County will continue to aggressively market the various contact methods to all target audiences.

See Section 7 for a detailed description of the County's Education Program.

6.4 Spill Prevention and Response

The County has established spill prevention and response procedures and requirements that are applicable both to its own staff and to private residences in the County Unincorporated area.

6.4.1 Spill Prevention

The County works to prevent spills and limit infiltration of seepage from sanitary sewers (including failing septic systems and private laterals) to the MS4. These activities are described in more detail below.

6.4.1.1 DPW Wastewater Management Section (WWM)

As described in Section 5.3.5, the Wastewater Management Section is responsible for maintaining sewer lines, pump stations, force mains, and several treatment plants for the County Unincorporated areas of Alpine, Julian, Lakeside, Spring Valley, Pine Valley, and Winter Gardens. The department delivers millions of gallons of wastewater from homes and businesses every day. Within these six sanitation districts, the department maintains a collection system of more than 430 miles of pipeline, with 10 pumping stations augmenting the system. An aggressive preventive maintenance program is followed by the department's Field Operations Section. Two-person crews are assigned to perform regular cleaning and inspection of lines by using high pressure water cleaners, sewer rodding vehicles, vacuum trucks, and pipeline video equipment.

Pumping stations are also aggressively maintained by WWM personnel. Daily, weekly, and monthly checks, tasks and alarm testing increase the service life and reliability of all equipment. Stations are linked to the main office via radio telemetry, enabling staff to obtain real-time status from miles away. In the event of a problem, personnel are notified via the computer alarm system. All stations are equipped with redundant control systems, pumps, and overflow storage basins to increase spill aversion abilities. Critical stations are also equipped with emergency generators to supply power.

⁸ <http://www.sandiegocounty.gov/content/sdc/dpw/watersheds.html>

Jurisdictional Runoff Management Program

6.4.1.2 Private Laterals and On-Site Wastewater Systems

Per WPO Section 67.807(g), private sewer laterals at residences in the County Unincorporated area must be cleaned, maintained, and, when necessary, replaced to prevent seepage and spills. Additionally, on-site wastewater systems must be pumped, maintained, and, when necessary, modified or replaced to prevent spills.

6.4.2 Spill Response, Containment, and Cleanup

Depending on the particular situation, a number of parties may become involved in spill response activities. County spill response personnel are trained to prevent the entry of sewage and other contaminants into the MS4, surface waters, groundwater, and soil.

6.4.2.1 Spills from Private Laterals and On-site Wastewater Systems

Per WPO Section 67.807(g), the following apply to private sewer laterals and on-site wastewater systems at residences in the County Unincorporated area:

1. Spills from private sewer laterals and on-site wastewater systems must be contained and cleaned-up in a manner that minimizes any release of pollutants to the stormwater conveyance system or receiving waters;
2. Any release from a private sewer lateral that enters the stormwater conveyance system or receiving waters must be immediately reported to the County; and
3. Failed on-site wastewater systems must be repaired or replaced, after issuance of all required permits and approvals.

6.4.2.2 Sanitary Sewer Overflows

The Wastewater Management Section is responsible for responding to overflows from the sewer lines, pump stations, force mains, and treatment plants it operates and maintains. Calls from the public during normal hours are responded to by the closest available crew. After-hour calls are routed via the County's Communication Center to on-call personnel. If the procedure requires controlled response, the person dispatched will call the customer and respond to the address given dependent on the nature of problem. Other personnel and equipment will follow, dependent on the situation.

6.4.2.3 Sewage / Septic Complaints

Upon receipt of a sewage complaint (i.e., effluent on the ground, or EOG) a specialist investigates the site within 24 hours of the complaint, usually on the same day the complaint was received. If there is a septic system failure, the occupant and/or owner of the property is issued a notice to "At Once" contain the spill, sanitize the area with "quick lime" or liquid chlorine, and have a permitted sewage pumping service pump the septic tank. The service must keep it pumped until the system is repaired under permit and inspected by the Department of Environmental Health (DEH) or the system is connected to an approved sewage disposal system. The property owner is given three weeks to obtain the proper repair permits and repair the system. Staff conducts follow-up inspections to the initial complaint response to verify compliance until the system is

Jurisdictional Runoff Management Program

repaired. Failure to comply can result in condemnation of the residence or closure of the business in order to stop the flow of sewage.

Most septic failures do not result in discharges leaving the property and are usually repaired quickly, often before the DEH is notified of the failure.

6.4.2.4 Non-Sewage Spills

DEH staff also responds to a variety of other types of spills. For those involving hazardous materials, the Hazardous Incident Response Team (HIRT) will respond to ensure proper mitigation and referrals to other agencies are conducted as needed. During normal work hours, Water Quality Program staff will normally respond to non-sewage spills which may enter the MS4.

6.5 Dry Weather MS4 Outfall Discharge Monitoring

The 2013 MS4 Permit requires the development and implementation of a Dry Weather MS4 Outfall Discharge Monitoring Program (Permit section D.2.b.). This includes the following:

- Dry Weather MS4 Outfall Discharge Field Screening Monitoring Program (Permit section D.2.b.(1))
- Non-Stormwater Persistent Flow MS4 Outfall Discharge Monitoring Program (Permit section D.2.b.(2))

The goal of the Dry Weather MS4 Outfall Discharge Monitoring Program is to identify non-stormwater and illicit discharges within the County's jurisdiction and prioritize the dry weather MS4 discharges that will be investigated and eliminated. The Dry Weather MS4 Outfall Discharge Monitoring Program for each Watershed Management Area (WMA) is described in detail within the MS4 Outfall Monitoring Plans included as appendices to the Water Quality Improvement Plans (WQIPs) or the County of San Diego Annual Dry Weather Monitoring Plan.⁹

An overview of the Dry Weather MS4 Outfall Discharge Monitoring Program is provided below.

6.5.1 Dry Weather MS4 Outfall Discharge Field Screening Monitoring

The County will conduct a Dry Weather MS4 Outfall Discharge Field Screening Monitoring Program as described in the 2013 MS4 Permit (Permit section D.2.b.(1)). The program consists of conducting field screening to determine which non-stormwater MS4 outfall discharges are transient flows and which are persistent flows. This information will be used to prioritize the non-stormwater MS4 discharges that will be investigated and eliminated in accordance with the illicit discharge detection and elimination (IDDE) procedures described herein.

6.5.1.1 Monitoring Locations and Frequency

The number of major outfalls required to be screened within a WMA, as well as the frequency of screening, is dependent upon the number of known major outfalls present in the County's inventory, per 2013 MS4 Permit section D.2.a.(2)(a). As the County of San Diego has less than

⁹ Available upon request

Jurisdictional Runoff Management Program

125 major MS4 outfalls per WMA, at least 80% will be visually inspected twice per year during dry weather conditions (per 2013 MS4 Permit section D.2.a.(2)(a)(i)).

6.5.1.2 Field Screening Visual Observations

During a field screening visual observation inspection, each MS4 outfall selected for screening will be inspected following at least 72 hours of dry weather after any storm event producing greater than 0.10 inch of rainfall within a 24-hour period. The visual observations that will be recorded during each field screening visual observation inspection, per 2013 MS4 Permit section D.2.a.(2), are summarized in Table 6.1.

Table 6.1: Field Screening Visual Observations for MS4 Outfall Discharge Monitoring Stations

Field Observations
<ul style="list-style-type: none">• Station identification and location• Presence of flow, or pooled or ponded water• If flow is present:<ul style="list-style-type: none">○ Flow estimation (i.e., width of water surface, approximate depth of water, approximate flow velocity, flow rate)○ Flow characteristics (i.e., presence of floatables, surface scum, sheens, odor, color)○ Flow source(s) suspected or identified from non-stormwater source investigation○ Flow source(s) eliminated during non-stormwater source identification• If pooled or ponded water is present:<ul style="list-style-type: none">○ Characteristics of pooled or ponded water (i.e., presence of floatables, surface scum, sheens, odor, color)○ Known or suspected source(s) of pooled or ponded water• Station description (i.e., deposits or stains, vegetation condition, structural condition, observable biology)• Presence and assessment of trash in and around station• Evidence or signs of illicit connections or illegal dumping

This information will be recorded in the field using the *MS4 Outfall Visual Observation Field Datasheet* (see [Investigation Procedures](#)).

The County will use the results of field observations, along with other available information (e.g., prior reports, inspections and monitoring results) to determine whether the observed flowing, pooled, or ponded waters should be deemed transient or persistent flows requiring investigation and elimination (see Section 6.6).

6.5.2 Non-Stormwater Persistent Flow MS4 Outfall Discharge Monitoring

The County will conduct a Non-Stormwater Persistent Flow MS4 Outfall Discharge Monitoring Program as described in the 2013 MS4 Permit (Permit section D.2.b.(2)). The program consists of conducting monitoring to determine which persistent non-stormwater discharges contain concentrations of pollutants below Numeric Action Limits (NALs), and which persistent non-stormwater discharges may impact receiving water quality during dry weather. This information

Jurisdictional Runoff Management Program

will be used to prioritize the non-stormwater MS4 discharges that will be investigated and eliminated in accordance with the IDDE procedures described herein.

6.5.2.1 Outfall Prioritization

Based upon the dry weather MS4 outfall discharge field screening monitoring results and historical data available, the County has identified major MS4 outfalls with persistent flows within its jurisdiction. These outfalls were then prioritized for each WMA considering the highest priority water quality conditions identified in the WQIPs, available historical data, and any additional criteria, as appropriate.

6.5.2.2 Monitoring Locations and Frequency

In each WMA, the County has identified and will monitor at least five highest priority major MS4 outfalls with non-stormwater persistent flows within its jurisdiction. In WMAs where there are less than five major MS4 outfalls with persistent flows within the County jurisdiction, all outfalls will be monitored. The locations of these outfalls can be found in the County of San Diego Annual Dry Weather Monitoring Plan¹⁰ and are included in the WQIPs.

All highest priority major MS4 outfalls will be monitored at least semi-annually. The County may substitute a next-highest priority major outfall for a selected major outfall in the event that one of the following criteria becomes applicable, until no qualifying major MS4 outfalls remain within the County's jurisdiction in a particular WMA:

- The non-stormwater discharges have been effectively eliminated (i.e., no flowing, pooled, or ponded water) for three consecutive non-stormwater monitoring events.
- The source(s) of the persistent flows has been identified as a category of non-stormwater discharges that does not require an NPDES permit and does not have to be addressed as an illicit discharge because it was not identified as a source of pollutants, and the persistent flow can be re-prioritized to a lower priority.
- The constituents in the persistent flow non-stormwater discharge do not exceed NALs, and the persistent flow can be re-prioritized to a lower priority.
- The source(s) of the persistent flows has been identified as a non-stormwater discharge authorized by a separate NPDES permit.

In the event of a substitution, the County will document the reprioritization of its highest priority persistent flow MS4 outfalls in the appropriate WQIP Annual Report or the County of San Diego Annual Dry Weather Monitoring Plan.¹¹

6.5.2.3 Field Observations

During the monitoring events, field observations will be recorded at each of the selected major outfall persistent flow monitoring sites. This information will be recorded in the field using the *Dry Weather Monitoring Field Datasheet* (see Attachment C of *Investigation Procedures*).

¹⁰ Available upon request

¹¹ Available upon request

Jurisdictional Runoff Management Program

6.5.2.4 Field Monitoring

During the monitoring events, in-situ measurements for field parameters will be collected at each of the selected major outfall persistent flow monitoring sites. These include:

- pH
- Temperature
- Specific conductivity
- Dissolved oxygen
- Turbidity

This information will be recorded in the field using the *Dry Weather Monitoring Field Datasheet*. Analytical methods and detection limits for field monitoring parameters are provided within the WQIPs.

6.5.2.5 Analytical Monitoring

6.5.2.5.1 Sample Collection

During the monitoring events, if sufficient flow is present, samples will be collected for analysis by an analytical laboratory. Grab samples will be collected according to the procedures described in the WQIPs and will follow Surface Water Ambient Monitoring Program (SWAMP) protocols. Quality assurance and quality control procedures are outlined in the WQIPs.

6.5.2.5.2 Laboratory Analysis

The required analyses are based upon the following five groupings of constituents:

1. Constituents contributing to the highest priority water quality conditions identified in each WQIP
2. Constituents listed as a cause for impairment of receiving waters in the WMA as listed on the 303(d) list
3. Constituents for implementation plans or load reduction plans developed for the WMA where the County is a listed responsible party to a Total Maximum Daily Load (TMDL)
4. Applicable NAL constituents listed in section C.1 of the 2013 MS4 Permit
5. Constituents listed in Table D-7 of the 2013 MS4 Permit

The analyses required for selected MS4 outfall persistent flow monitoring, including suggested analytical methods and required reporting limits, are detailed in the WQIPs. Laboratory analysis of sample chemistry and microbiology will be performed by a laboratory certified for the appropriate fields of testing by the California Environmental Laboratory Accreditation Program (ELAP). Quality assurance and quality control procedures for laboratory analysis are outlined in the WQIPs.

Jurisdictional Runoff Management Program

If the County identifies and eliminates the source of the persistent flow non-stormwater discharge, analysis of the sample is not required.

6.6 Investigation and Elimination of Illicit Discharges and Connections

The primary objective of this program element is to detect and eliminate illicit connections and illegal discharges (IC/IDs) to the MS4. The IC/ID investigation and elimination process includes: Illicit Discharge Incident Report, Validation, Prioritization and Response, Investigation, Tracking to Endpoint, Enforcement, Recordkeeping, and Reporting (Annual Report).

In response to visual observations and/or water quality monitoring data collected during dry weather field screening, the County is required to immediately follow up on obvious illicit discharges and connections, including those that are determined to be a threat to human health or the environment. If the incident is not an obvious illicit discharge or connection or a threat to human health or the environment, the County is required to prioritize outfalls for future investigation and elimination of illicit discharges and connections (2013 MS4 Permit section E.2.d.). As a part of the field investigations, the County is also required to identify the potential source(s) of the illicit discharges and connections and to report these findings, as well as any corrective measures taken, to the Regional Board. The 2013 MS4 Permit identifies four potential endpoints¹² for the field investigations:

- A. Natural in origin and conveyance;
- B. Illicit discharge/connection;
- C. Other non-stormwater discharges;
- D. Unidentified.

The relationship between the various steps of the investigation and elimination process is illustrated in the flow chart presented in Figure 6.1. More detail on each of these steps is provided within the *Investigation Procedures*.

¹² As specified in Permit section E.2.d.(3)b-e of Order R9-2013-0001.

Jurisdictional Runoff Management Program

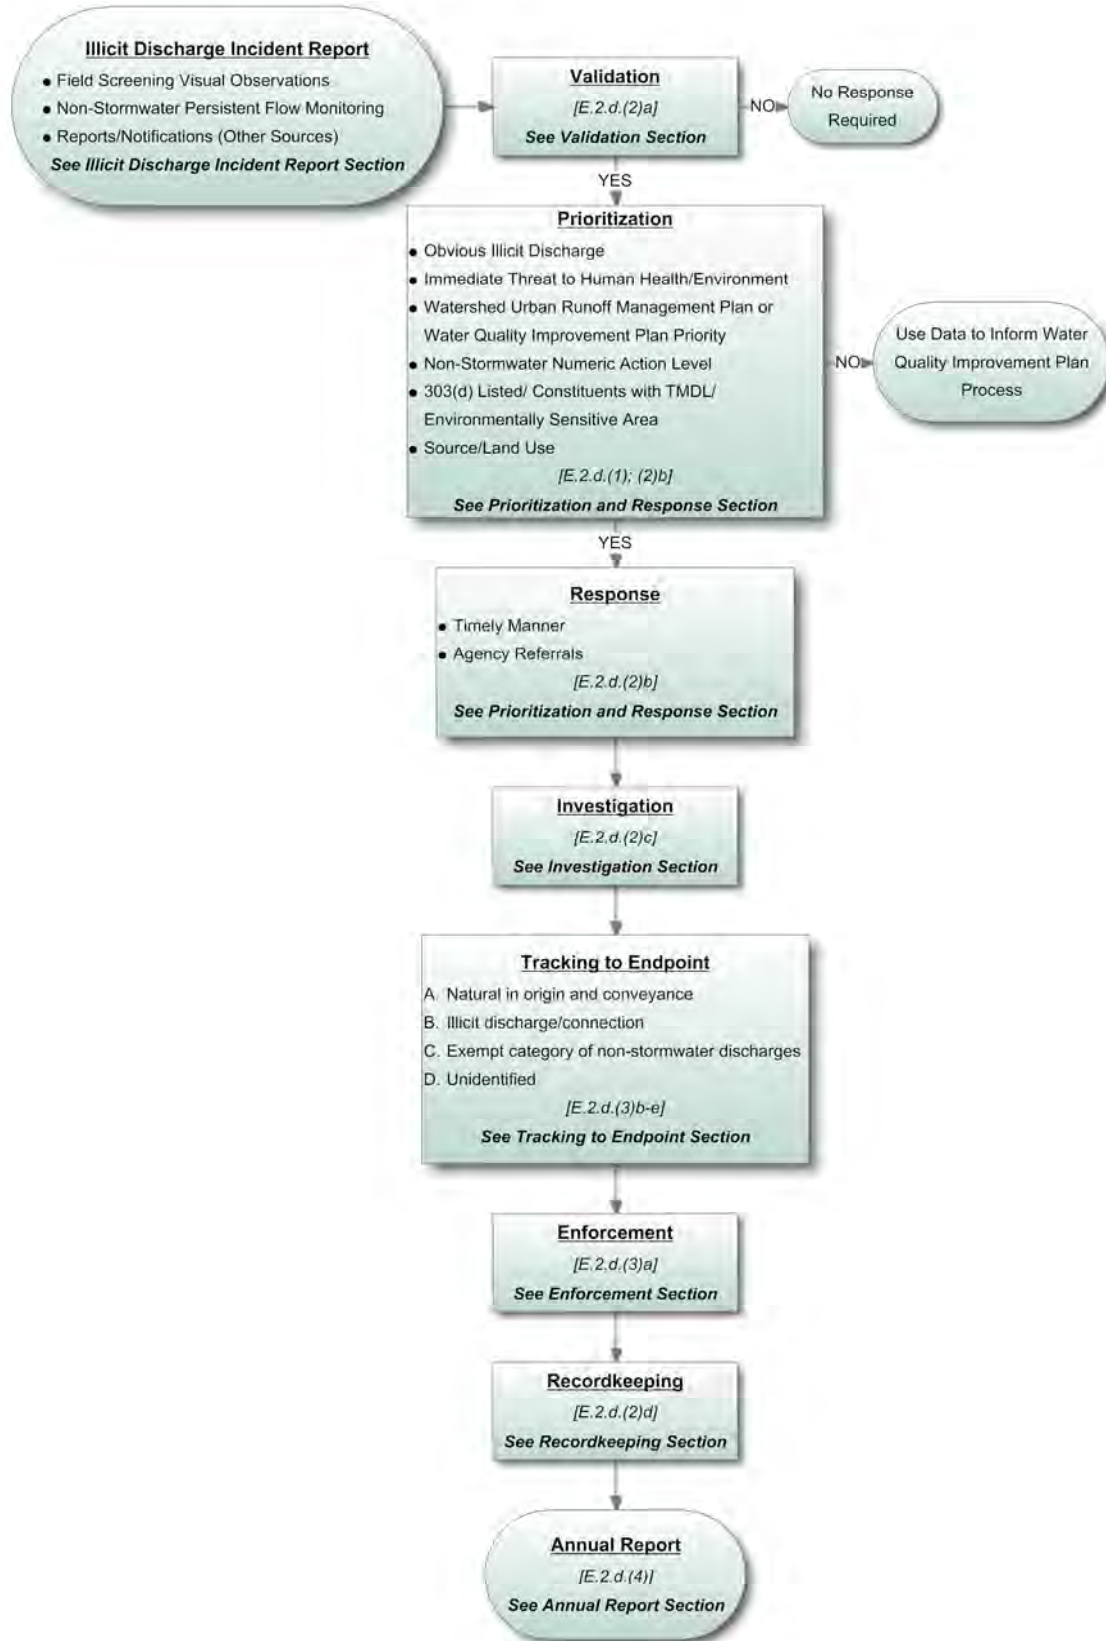

Figure 6.1: Overview of Investigation Procedures

Jurisdictional Runoff Management Program

6.6.1 Illicit Discharge Incident Report

Reports of illicit discharges and/or connections can come from a variety of sources, including field staff; the general public; County personnel; Regional Board staff, and/or emergency personnel. The primary response triggers for illicit discharges and connections are:

- Field Screening Visual Observations: Field staff may identify an illicit discharge or connection via visual inspections during Transitional Dry Weather MS4 Outfall Discharge Field Screening Monitoring (2013 MS4 Permit section D.2.a.(2)) or Dry Weather MS4 Outfall Discharge Field Screening Monitoring (2013 MS4 Permit section D.2.b.(1)).¹³
- Non-Stormwater Persistent Flow Monitoring: Field staff may identify an illicit discharge or connection during Non-Stormwater Persistent Flow MS4 Outfall Discharge Monitoring (2013 MS4 Permit section D.2.b.(2)).
- Reports/Notifications from Other Sources: An illicit discharge or illicit connection to the MS4 may be reported via the hotline or other complaint tools. In these cases, hotline procedures are followed, which may include a mandatory site visit.

Once a report or notification is received, County staff must determine if it is a valid report.

6.6.2 Validation

If a report is received from sources other than field staff conducting field screening or monitoring, staff must assess the validity of each report or notification received. Each report or notification should be validated by obtaining key information pertaining to the incident via a phone call, if possible, and/or by visiting the site in the field to determine next steps (see Figure 6.2). The validity of a report or notification is often based on the inspector's best professional judgment.

- Invalid Report/Notification – If the report or notification is determined to be invalid, no additional investigation is required. However, staff should note these in the database so such instances can be reported in the Annual Reports.
- Valid Report/Notification – If the report or notification of an illicit discharge or connection has been validated, staff is required to prioritize and respond in a timely fashion to further assess the report and determine follow-up actions.

Please see the *Investigation Procedures* for additional information, including a definition of what is considered to be a “threat to human health/environment.”

¹³ Permit section D.2.a.(2) specifies that Transitional Dry Weather MS4 Outfall Discharge Field Screening Monitoring be conducted until the monitoring requirements and schedules of Permit section D.2.b are incorporated into a WQIP accepted by the Regional Board. The pre- and post- WQIP Field Screening Monitoring efforts include only visual observations.

Jurisdictional Runoff Management Program

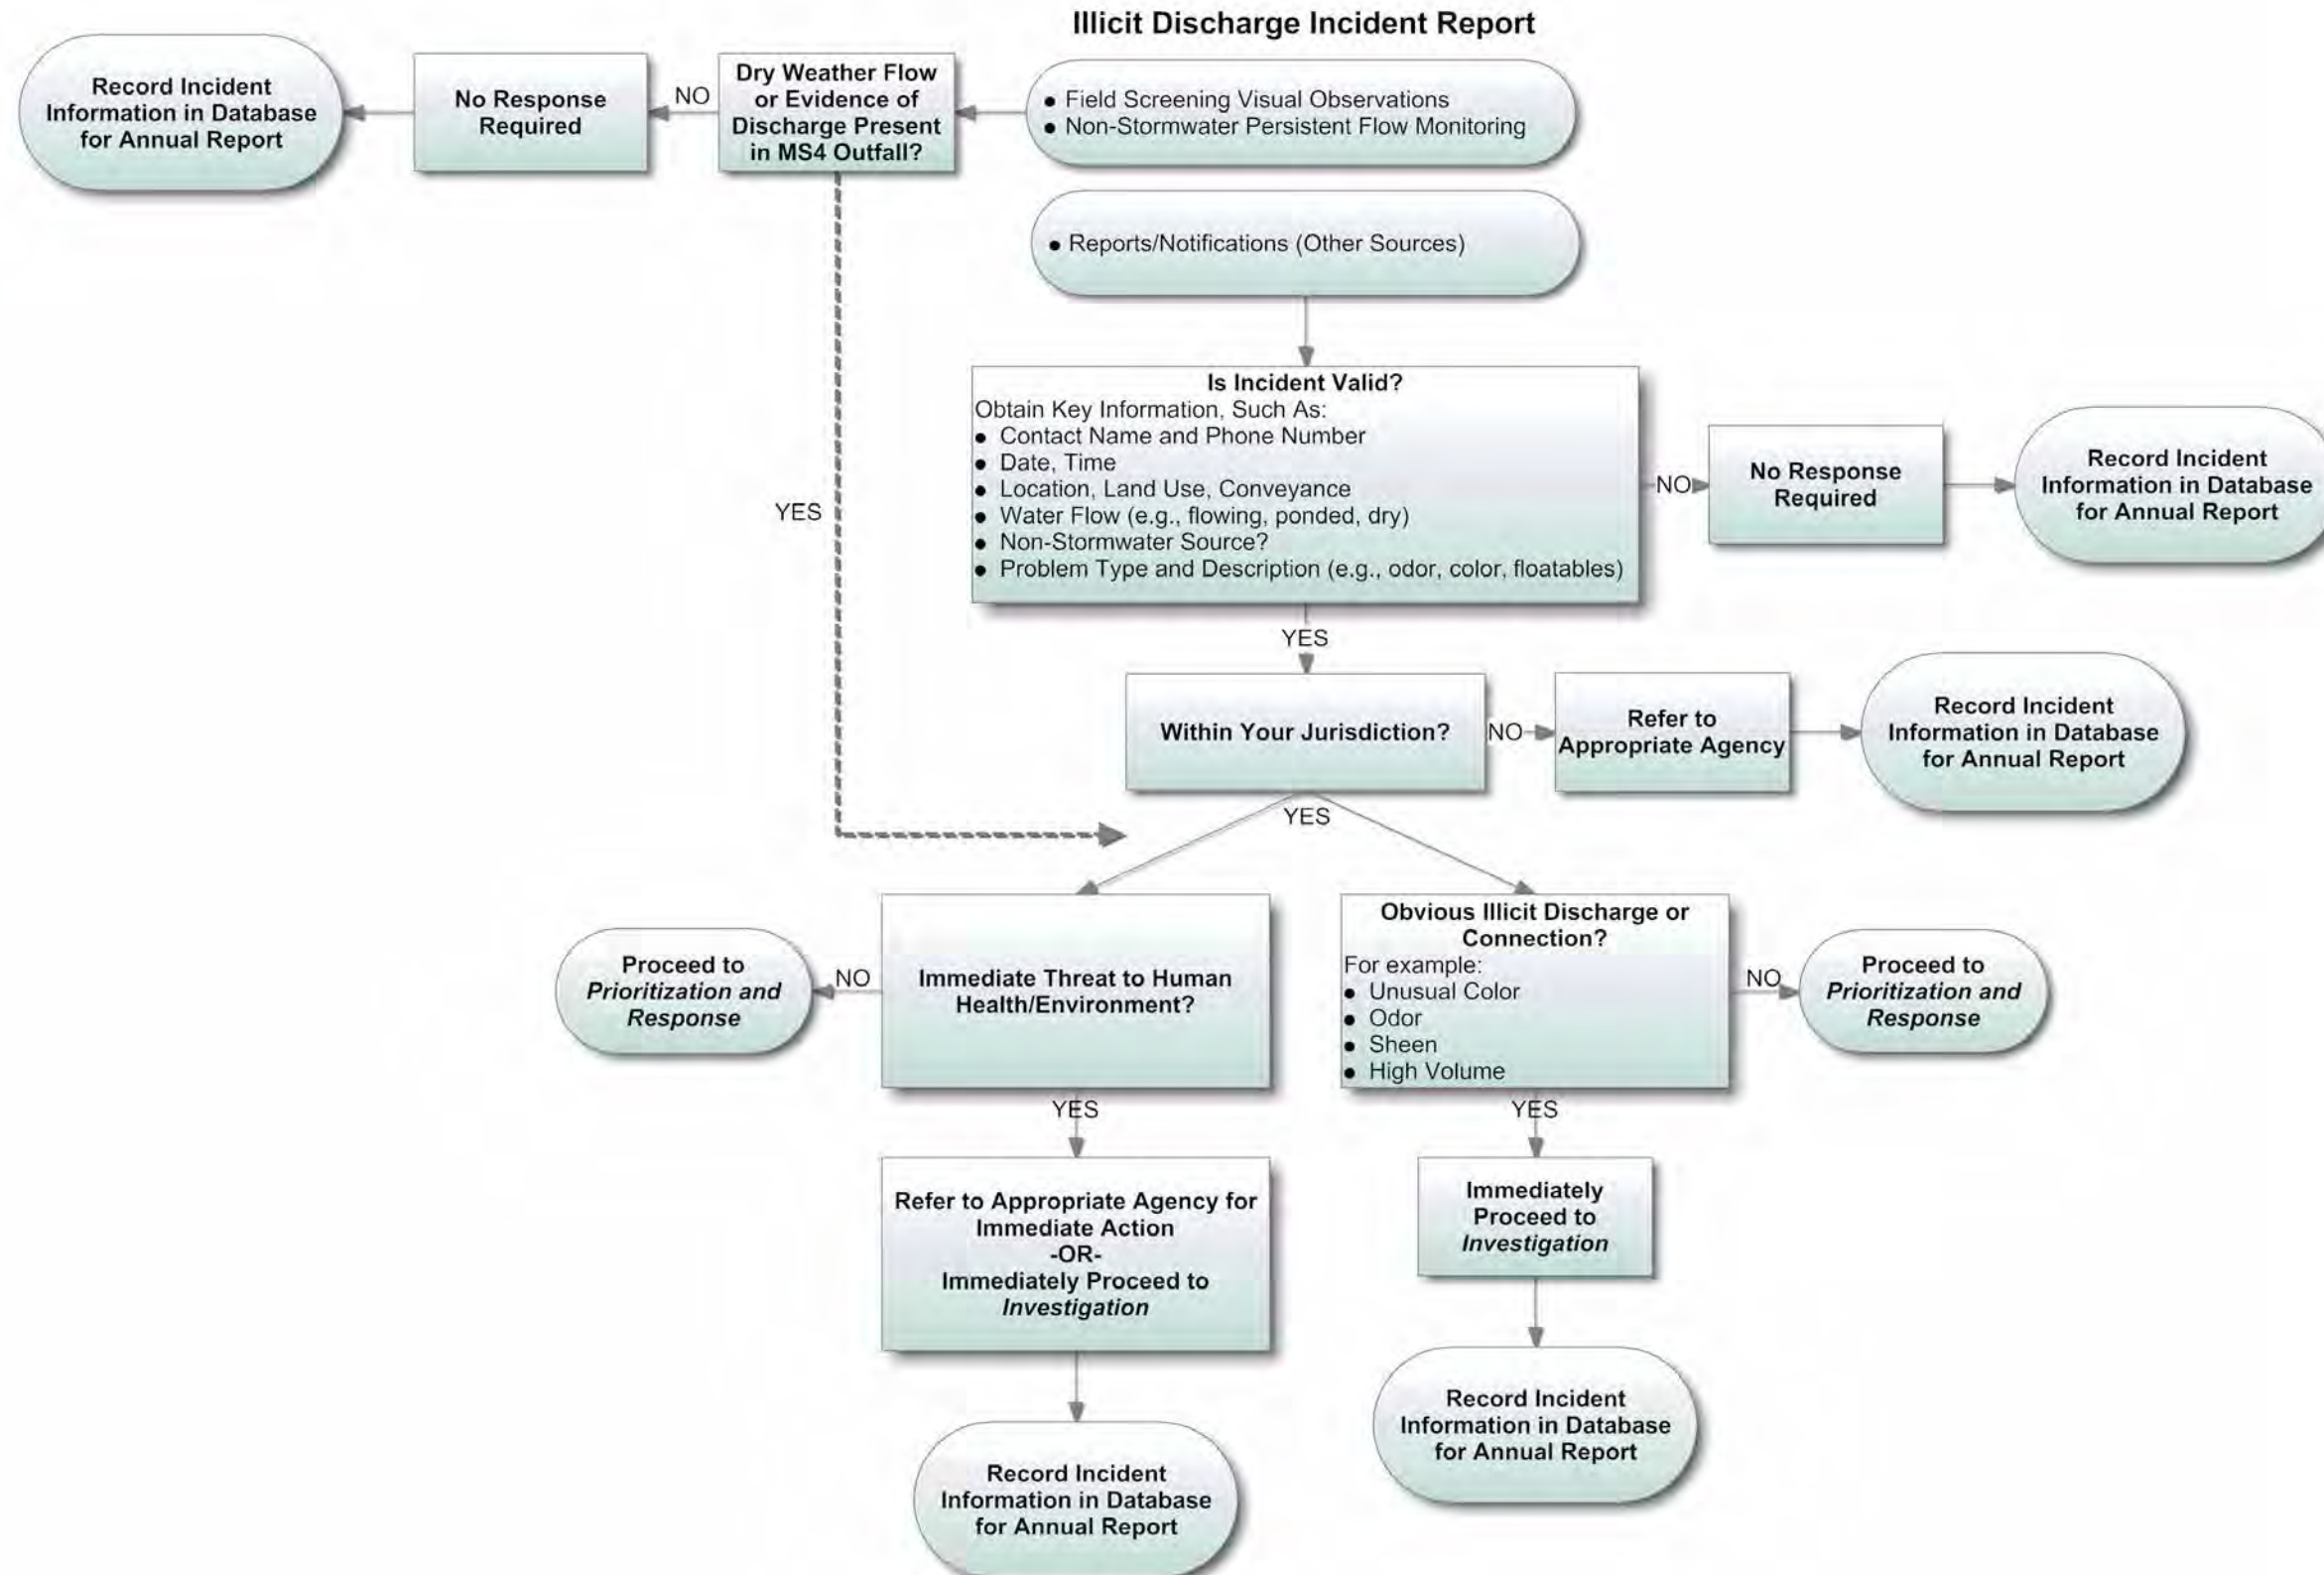

Figure 6.2: Validation and Initial Responses to Illicit Discharge Incident Reports

Jurisdictional Runoff Management Program

6.6.3 Prioritization and Response

Validated illicit discharges or connections must be prioritized to determine the appropriate response and whether field source investigations are needed. The criteria for the prioritizations include the following:

1. Obvious illicit discharges (e.g., unusual color or odor) will be immediately investigated according to the *Investigation Procedures*.
2. If sampling is conducted at an MS4 outfall in response to a complaint investigation or another monitoring program, then the sampling results should be used to inform the prioritization process and determine the appropriate response. The prioritization considerations include:
 - a. Pollutant level identified as an immediate threat to human health or the environment
 - b. Pollutant identified as causing or contributing to the highest water quality priorities identified in the WQIPs
 - i. Historical results reviewed for consistency
 - c. Pollutant identified as causing or contributing to an exceedance of an NAL¹⁴
 - d. Pollutant identified as causing or contributing, or threatening to cause or contribute to impairments in water bodies on the 303(d) List and/or environmentally sensitive areas (ESAs)¹⁵
 - e. Pollutant identified from sources or land uses known to exist within the area, drainage basin, or watershed that discharges to the portion of the MS4

Additional information for the prioritization process is provided in the *Investigation Procedures*.

6.6.4 Investigation

If it is determined that an incident needs to be investigated immediately or has been prioritized, field staff must investigate and try to identify the source(s) or potential source(s) of illicit discharges and connections and/or discharges of non-stormwater flows. Dry weather flows will generally be followed from the location where they are first observed in an upstream direction along the conveyance system.

Prior to conducting an investigation, field staff should compile and review available resources including:

- Past dry weather monitoring reports and dry weather MS4 outfall visual field screening and monitoring data;
- GIS land use maps;

¹⁴ See the NAL Reference Tables (Table C-1 through Table C-4) the *Investigation Procedures*

¹⁵ See *Investigation Procedures*

Jurisdictional Runoff Management Program

- MS4 maps;
- Aerial photographs; and
- Property ownership information.

The following steps are to be taken during a field investigation:

1. Always take GPS coordinates at each new site and fill in a Field Datasheet (see Attachment C of the *Investigation Procedures*).
2. Proceed upstream in conveyance as needed to trace possible source(s).
 - a. If the flow is coming from another jurisdiction, notify a supervisor, so a formal notification in writing can be made to a representative of the relevant jurisdiction, informing them of the situation. County staff will not track flows into other jurisdictions.
 - b. If field staff are initially unable to locate the source(s) of the flow (e.g., the flow is traced to a seep, flow discharges from a pipe, the channel terminates, etc.) consider the following possibilities: first, the flow may originate from a road gutter. Check catch basins and gutters between sites for evidence of flows such as runoff from steam-cleaning operations, car washing, irrigation runoff, etc. There may also be a new or illicit connection to the system, possibly between manholes. Look for areas in the road that have been dug up and re-paved. Also consider checking with the appropriate department for any recent work that may have been done in the area. Finally, look for evidence of recent or past dumping such as wet and/or stained pavement or gutters.
 - c. If necessary, contact the appropriate department/division for assistance on tracking below ground storm drain systems. When tracking flows in below ground systems it may be necessary to follow flows from the outfall or manhole to the next manhole with a junction. Manholes will not always need to be checked if there are no junctions between them. Field staff will record information on the surrounding areas and look for water flowing in gutters and streets. Areas where illegal dumping may typically occur include parking lots and garages behind buildings and warehouses. **DO NOT ENTER MANHOLES** unless confined space certified and following established safety protocols.
 - d. If flow is observed coming from only one location within the storm drain network, continue tracking upstream from that outlet. If flow is observed coming from more than one location, track them upstream one at a time, using visual observations, odors, and/or field screening sampling to determine the order of investigation. Use test strips or other field test kits or meters for quick preliminary results for multiple flows. It is generally easiest to track the largest flows first, but if they are about the same size, start with the one that is easiest,

Jurisdictional Runoff Management Program

shortest, or with the least number of junctions, or track those originating from areas with the greatest potential for illicit discharges.

3. Collect samples at upstream confluences as needed for chemical analyses.
 - a. If tracking a nitrate exceedance, nitrate test strips can be used as a screening tool in determining which flows to follow.
 - b. If tracking a pH exceedance and pH is <5.0 or >10.5, consider using pH test strips instead of a pH meter.
4. If possible, trace dry weather flow from conveyance to street / storm drains.
 - a. If possible, collect samples as needed for chemical analysis. Such analyses should be selected based on the field staff's best professional judgment regarding what sources may be present.
5. If dry weather flow is traced to a facility, collect sample at curb or public right of way and submit for chemical analysis. Document with photos. Notify a supervisor for further instructions.

6.6.5 Tracking to Endpoint

The 2013 MS4 Permit requires that each field investigation identify one of the following endpoints as the potential source of the discharge:

- A. Natural in origin and conveyance;
- B. Illicit discharge/connection;
- C. Other non-stormwater discharges;
- D. Unidentified.

The discharge at each outfall should be evaluated by analyzing all of the information and data available prior to determining the source of the discharge. Detailed tables based on the four potential endpoints are provided within the *Investigation Procedures*. The tables include guidance regarding the potential characteristics and constituents of concern typically associated with each endpoint. Tables are included for each of the four endpoints above; an additional table for general guidance is also provided. These tables allow field staff to focus on specific endpoints as they evaluate multiple constituents/ characteristics of the discharge in order to determine the source of the discharge.

6.6.6 Recordkeeping

As field staff conducts investigations, they must maintain records and a database of relevant information for each incident. This information is recorded in the field using Field Datasheets. The Field Datasheets are used by field staff to record information gathered at the outfall as part of the dry weather monitoring program.

Jurisdictional Runoff Management Program

This form allows staff to evaluate all of the field and laboratory data in order to identify and support the field investigation endpoint determination. This information is entered into a database that is used for annual reporting.

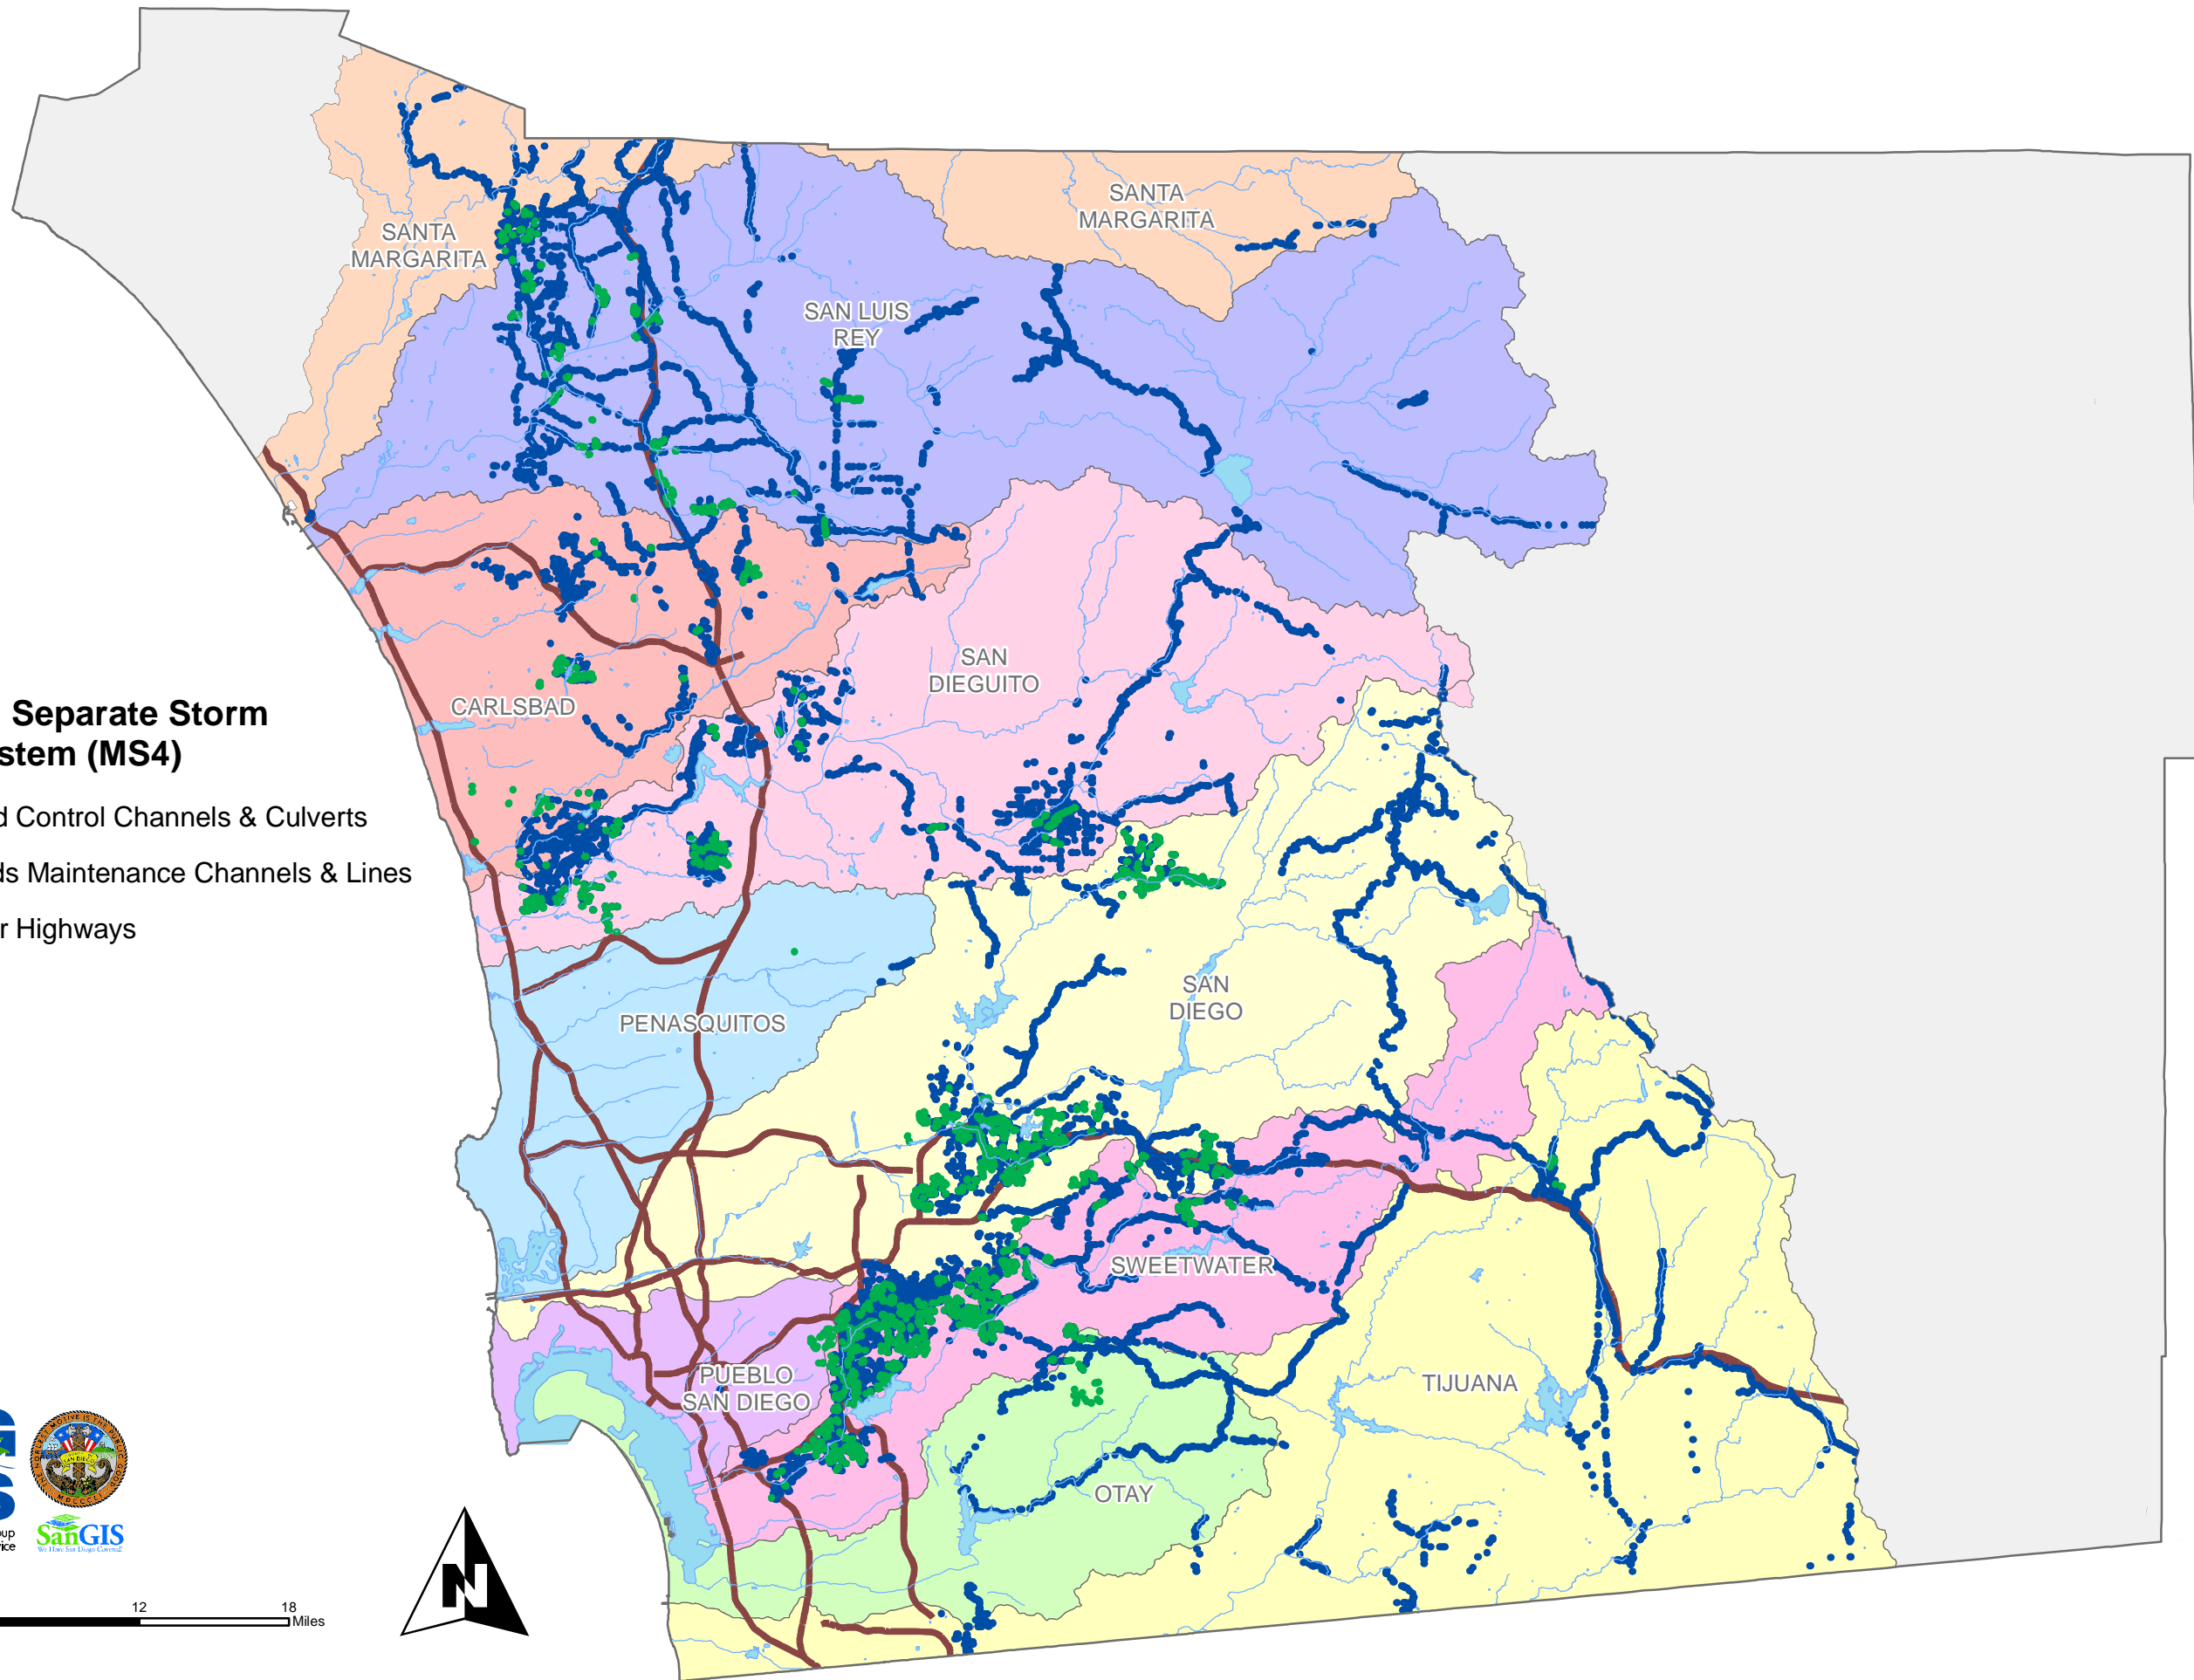

6.6.7 Reporting (Annual Report)

With each Annual Report, the County must submit a summary of the non-stormwater discharges and illicit discharges and connections investigated and eliminated within its jurisdiction. Field staff support this effort via thorough recordkeeping. Information is entered into a database and is compiled and reported in the Annual Reports.

Jurisdictional Runoff Management Program

7.0 PUBLIC EDUCATION COMPONENT

7.1 INTRODUCTION

Education is an important aspect of every effective program and the basis for changes in behavior. Education for both municipal staff and the public will strive to inform the respective audience about how certain activities can have a negative impact on water quality, how they can accomplish activities while protecting water quality, and their specific roles and responsibilities. Education activities are implemented at the regional, watershed, jurisdictional levels, as well as to specific target audiences. At a minimum, education efforts will be targeted to reach the following communities: municipal facilities and personnel; construction site owners and developers; industrial and commercial business owners and operators; the general public, school children, and residential communities.

7.2 STAFF TRAINING ELEMENT

Stormwater training is an important aspect of watershed protection for municipal staff with defined responsibilities in developing, administering, and implementing the various elements of the County's Jurisdictional Runoff Management Program (JRMP). Training is determined and prioritized by the County to address the watershed highest priority water quality conditions identified in the jurisdiction or the Water Quality Improvement Plan (WQIP). The responsibility for reviewing, updating, and conducting staff training lies with each of the respective County departments and groups that are identified in this section and throughout the JRMP. Departments are encouraged to pursue appropriate alternatives to existing basic training programs to enhance employee's skill sets or otherwise improve their ability to carry out their individual job responsibilities. In addition to sharing those general responsibilities, the Department of Public Works (DPW) Watershed Protection Program (WPP) is responsible for developing general guidance and standards as necessary to ensure successful implementation of the training program element.

7.2.1 Training Objectives

For each training element, training will be guided by two general objectives:

1. **Knowledge and Awareness** – Training will provide an understanding of the impacts of urban runoff on receiving waters, the general concepts underlying urban runoff management, and individual staff responsibilities for managing those impacts. All training will reinforce the fact that storm drains discharge directly to waterways without treatment.
2. **Behavior** – Training is one of many components that will facilitate the proper implementation of Best Management Practices (BMPs) by staff as well as the general public. Increasing knowledge, awareness, and changing attitudes provide a foundation for changing behavior.

Jurisdictional Runoff Management Program

7.2.2 General Requirements

Many departments and department divisions share responsibility for implementing the County's JRMP. For training purposes, staff is divided into three main groups, each reflecting the primary responsibilities of the individuals comprising it:

- Program Administration;
- Program Implementation; and
- Pollution Awareness and Reporting.

County employees that are not included within any of the three groups do not receive stormwater training; instead, they are addressed as a specific audience population in the County's Outreach Program (Section 7.3).

7.2.2.1 Program Administration (Administrators)

Administrators include management with planning, development, administration, reporting, or assessment responsibilities related to any program or activity described in the County's JRMP. Examples of staff with program administration responsibilities include, but are not limited to, the following:

- Land Use & Environment Group (LUEG) upper management;
- General Services upper management;
- Staff providing legal advice or counsel on stormwater issues; and
- Staff responsible for developing or providing training.

Program Administration does not include staff with any of the specific responsibilities identified in Section 7.2.2.2 (Program Implementation) because this staff must meet a stricter training standard. If staff has both Program Administration and Pollution Awareness and Reporting responsibilities (Section 7.2.2.3), the training type that most closely fits their specific job responsibilities applies.

7.2.2.2 Program Implementation (Implementers)

This category includes all County employees with direct stormwater implementation responsibilities. Implementers include employees who work outdoors and may implement BMPs, those that perform stormwater self-inspections and maintenance, and those employees that create or review Stormwater Management Plans (SWMPs), stormwater pollution prevention plans (SWPPPs), Facility Pollution Prevention Plans (F3Ps), or inspect/enforce for stormwater regulations. Examples of staff with program implementation responsibilities include, but are not limited to, the following:

- Land Development planners and engineers;
- Construction inspectors;

Jurisdictional Runoff Management Program

- Code enforcement;
- Facility maintenance personnel;
- Site supervisors and facility staff;
- Road maintenance crews;
- Flood control maintenance crews;
- Fleet technicians;
- Park rangers;
- Pesticide/Fertilizer applicators; and
- Vendors, Contractors, and Lessees.

7.2.2.3 *Pollution Awareness and Reporting (Awareness)*

Many County employees spend a significant amount of time in the field and therefore have the opportunity to observe and refer potential stormwater violations. This group differs from staff with implementation responsibilities in that their sole stormwater responsibility is to recognize and report potential violations. Employees, who are likely to observe stormwater violations, must receive training focused specifically on recognizing and reporting potential stormwater violations. This training type only applies to employees who work outdoors and are not already included in one of the other categories above.

Examples of County employees with Pollution Awareness and Reporting responsibilities include, but are not limited to:

- Hazardous materials inspectors;
- Emergency responders;
- Restaurant inspectors;
- Vector control technicians;
- Air quality inspectors;
- Flood control field staff; and
- Watercourse staff.

7.2.2.4 *Minimum Training Frequencies*

Table 7.1 summarizes the minimum training frequencies. Implementers training and Awareness training is required at least annually. Employees in the Administrators category must receive training at least twice per Permit cycle. Administrators training will generally occur once within the first two years of the Permit cycle, and once again within the last two years of the Permit cycle. Based on job title, all employees whose job duties include stormwater awareness, administration, or implementation are identified in the County's Learning Management System

Jurisdictional Runoff Management Program

(LMS), a portal for providing and tracking employee training . Annually, these audiences are “refreshed” to include only those current staff with these stormwater responsibilities. All new staff being hired, promoted, or transferred into a position which falls within one of the training categories will be trained to those specifications within the same fiscal year. Supplemental training will be provided as needed for any significant programmatic changes that occur such as Permit or Ordinance revisions.

The training frequencies and requirements described in this section are considered minimum training requirements. Supplemental training is not generally required, but it may be warranted should significant programmatic changes occur (e.g., permit, policy, or ordinance revisions), or in response to the results of program audits or evaluations which may necessitate corrective actions and additional training.

Table 7.1 – Minimum Training Frequencies

Frequency	Annual	Twice per Permit Cycle	Upon Hire or Change in Job Class
Administrators		○	○
Implementers	○		○
Awareness and Reporting	○		○

7.2.2.5 General Training Responsibilities

The DPW WPP has the following training responsibilities:

- Developing, annually reviewing, and updating standardized training content (Table 7.2) for enhancement and use by implementing departments and groups;
- Providing general assistance in developing specific training content;
- Pre-approving any training substitutions to the WPP provided training; and
- Requesting training data and information from implementing departments and groups for inclusion in annual reports to the Regional Water Quality Control Board (Regional Board), and for program assessment purposes.

Departments and groups are responsible for the following:

- Assigning staff to a specific training category;
- Arranging training in accordance with Table 7.1;
- Annually reviewing and updating training content with specific information appropriate to the specific roles and responsibilities of the audience;
- Ensuring that staff attends scheduled trainings, and arranging alternate (make-up) trainings as needed;
- Maintaining training records for a minimum of three years; and
- Reporting training data and information annually, as requested by the DPW WPP.

Jurisdictional Runoff Management Program

Departments or Groups who contract work (consultants, contractors, service providers, etc.) or maintain County leased property where outdoor activities occur are also responsible to determine how the requirements of this section apply to the contractor(s)/lessees conducting activities and provide the appropriate training. In general, any contractor/lessee providing broad oversight of potential pollutant-generating activities or BMP implementation should be provided or required to obtain the level of stormwater training that would be required for County staff performing the same functions. However, those contractors/lessees who are only conducting specific (focused to one activity) tasks, such as landscaping or street sweeping, may only be required to receive training that is focused on those activities that the contractor will conduct.

7.2.3 Training Content

Core watershed concepts and stormwater information should be included within the stormwater training (background, pollutant sources, BMPs, responsibilities, updates). This core information provides the structure for the stormwater training content. Table 7.2 summarizes the applicability of specific content to each of the three training types. The specific content options are also described below. Table 7.2 lays out a general road map; however, the actual content of any training should be appropriate to the specific roles and responsibilities of the audience. Respective departments/groups will identify and incorporate additional training content beyond that shown in Table 7.2 as they determine necessary to ensure the proper implementation of stormwater responsibilities. Additional content may also be required in response to significant programmatic changes or the results of program audits or evaluations.

Training content is dynamic, and will reflect the experience and knowledge gained by respective Department/Group staff over the Permit cycle. The specific content and relative emphasis of particular elements is therefore expected to evolve over time. For instance, first year training of inspectors might include a detailed review of procedures and forms, but less emphasis might be provided in subsequent years as staff gains experience in their use.

Feedback and verification of the training program's effectiveness is one of many assessment components that will be used to ensure overall stormwater program compliance. It is necessary to regularly evaluate the effectiveness by verifying whether or not there is a change in stormwater knowledge over time. To identify these types of changes, pre- and post- quizzes are completed as part of the LMS stormwater training programs (Administrators, Implementers, and Awareness). Core stormwater questions are asked across all training components, and specific content related questions will also be included.

Jurisdictional Runoff Management Program

Table 7.2 – Overview of Required Training Elements by Responsibility Type

Stormwater Training Elements	Principal Responsibilities		
	Program Implementation	Program Administration	Pollution Awareness & Reporting
I. Background	Required		
A. General Concepts		X	X
B. Regulatory Framework		X	
C. Program Updates		X	
II. Pollutant Sources			
A. Pollutants and Impacts		X	X
B. Pollutant-Generating Activities (PGAs)			
III. Best Management Practices			
A. Discharge Prohibitions		X	X
B. BMP Requirements (Planning / Implementation / Maintenance)			
C. Pollution Prevention (P2) Practices			
D. Additional Controls for Sources Tributary to Envir. Sensitive Areas			
IV. Staff Responsibilities			
A. Pollution Reporting		X	X
B. Documentation & Reporting		X	

7.2.3.1 *Background Information*

General Concepts

A review of general concepts is necessary to provide an informational basis for other, more specific topics to be covered throughout the training. Examples of general concepts include, but are not limited to the following:

- Watershed concepts;
- Definition and description of stormwater vs. urban runoff;
- Explanation of stormwater conveyance systems (MS4), how they work, and how they are not connected to the sanitary sewer system;
- Explanation of short- and long-term water quality impacts on waterways associated with urbanization; and
- Identification of impaired water bodies and a description of pollutants of concern for the San Diego region.

Regulatory Framework

As applicable to their job responsibilities, employees may be provided training on the following topics:

- Federal, state, and local water quality laws and regulations;

Jurisdictional Runoff Management Program

- General requirements of National Pollutant Discharge Elimination System (NPDES) Order No. R9-2013-0001;
- The County's Watershed Protection Ordinance (WPO) and other relevant authorities; and
- Penalties and liability associated with non-compliance.

Program Updates

Training programs will be updated as internal programmatic changes occur, as new programs are implemented (e.g., Low Impact Development (LID) and Hydromodification), or as changes to the Permit or Ordinance occur. Additionally, any issues or concerns that may be addressed through the Copermittee workgroups, or annual reporting feedback, etc., will also be incorporated into training program revisions. Training programs will be evaluated and updated annually, as needed.

7.2.3.2 Pollutant Sources

As applicable to the audience's job responsibilities, training may include any of the following:

Pollutants and Impacts

- Identification of common pollutants and their associated impacts on water quality, human health, and natural habitats;
- Identification of other pollutants prioritized within the WQIP; and
- Identification of impaired water bodies and a description of pollutants of concern for the San Diego region.

Pollutant-Generating Activities (PGAs)

- Identification of land development and construction activities that generate pollutants;
- Identification of municipal operations (fixed facility and field activities) that generate pollutants;
- Identification of both job-related and at-home (residential) activities that typically generate pollutants; and
- Identification of PGAs related to special events, emergency response, and pesticide, herbicide and fertilizer use.

7.2.3.3 Best Management Practices

As applicable to the audience's job responsibilities, training may include any of the following:

Discharge Prohibitions

- The County's obligation to reduce pollutant containing discharges to the MS4;
- The County's obligation to prevent urban runoff discharges from causing a violation of water quality standards;
- Examples of water discharge prohibitions and exemptions; and

Jurisdictional Runoff Management Program

- Illicit connection identification.

BMP Requirements

Employees should be trained on the planning, implementation, and maintenance of BMPs available to them.

- Source Control BMPs, Erosion and Sediment Control BMPs, Treatment Control BMPs,
- Structural vs. non-structural BMPs;
- BMP applicability, selection, and implementation based on onsite conditions and activities;
- BMP vector concerns;
- BMP maintenance requirements;
- Process for verification and tracking of Treatment Control (Structural) BMPs; and
- Procedures to inspect and evaluate BMP effectiveness;

Pollution Prevention (P2) Practices

- The definition and purpose of pollution prevention (as related to stormwater or urban runoff) and source control;
- Pollution prevention BMPs on the job and at home;
- Identification of minimum pollution prevention (P2) BMPs that should be implemented based upon each activity type or area;
- Management and disposal of used oil and toxic material; and
- Consideration of Integrated Pest Management (IPM) techniques.

Additional Controls for Sources Tributary to Environmentally Sensitive Areas (ESA)

- Identification of impaired water bodies, TMDLs, ESAs, and setting priorities for inspection, review, or approval of facilities/projects based on their threat to water quality.

7.2.3.4 Staff Responsibilities

County personnel should be made aware of their explicit stormwater responsibilities during stormwater training. Staff responsibilities vary greatly (some review stormwater plans, others install stormwater BMPs, while others sweep county roads, etc.). However, at a minimum, staff should know how to report stormwater violations and stormwater annual report data to the WPP.

Pollution Reporting

Employees should be trained on how to report potential stormwater violations. Training should include reference to the County's Stormwater Hotline (888-846-0800), the Project Clean Water website (www.projectcleanwater.org/html/complaints.html), and WPP's email address (watersheds@sdcounty.ca.gov) for easy reporting. The County's stormwater violation referral sheet should also be made accessible wherever possible.

Jurisdictional Runoff Management Program

Documentation and Reporting

Employees should be familiar with stormwater documentation which guides their program and identifies any stormwater obligations or responsibilities. Stormwater program documentation may include pollution prevention plans (SWMPs, SWPPPs, F3Ps), self-inspections, spill reports, stormwater training sign-in sheets, procedures, policies, contracts, leases, agreements, etc. Any applicable stormwater documents should be provided to employees and reviewed as part of their training program. Employees should also be provided an opportunity to identify ways in which departmental data collection and documentation can be improved. Any updates to stormwater data collection and documentation should be reported to the WPP at least annually for the JRMP annual reports.

The means of documenting the training program should occur either by training sign-in sheets or through the County's online LMS. Training documentation should be sent to the departmental training coordinator and, where applicable, kept within SWPPPs and F3Ps for onsite documentation of annual training.

Annual reporting of training will be done by each department's training coordinators. Information to be reported will include staff requiring training vs. staff receiving training. Reporting information will be utilized not only to prepare JRMP Annual Reports to the Regional Board, but will also provide a means for making program improvements.

7.2.4 Training Methods

Depending on the particular audience and content, training may be provided to municipal employees via a number of approaches. Examples include classroom training; presentations at staff meetings; online using the LMS, and external training opportunities (vendor training, workshops, etc.). Table 7.3 provides an overview of available training methods, and shows their applicability to each category of training. Program Implementation training should be provided in-person via a classroom or through the LMS. Stormwater certifications can be applied towards the annual implementer requirement, however only once per permit cycle (acceptable certifications listed in Table 7.3). Other training courses may also be used in place of the implementers training as long as all applicable elements are covered and pre-approval is acquired by WPP. Proof of attendance of outside course/certification will be required. Combinations of classroom and other methods are encouraged. Program Administration and Pollution Reporting training will most often be conducted via staff meetings or the LMS. All of the methods listed are potentially applicable to Supplemental Training; each Department or group providing the training is responsible to determine their applicability. Training methods not listed in Table 7.3 may also be used, but will require the approval of the WPP prior to their use.

Training content is generally conveyed using a variety of tools such as videos, brochures, manuals, fact sheets, posters, and other written materials. In many cases, a combination of tools is used.

Jurisdictional Runoff Management Program

Table 7.3 – Preferred Training Methods by Target Audience

Method	Core Training			Supplemental Training
	Program Implementation	Program Administration	Pollution Reporting	
Classroom training	○	○	○	○
On-line (LMS) or written training modules	○	○	○	○
Staff meetings	○	○	○	○
Stormwater Certifications* (CPESC, CPSWQ, CESSWI, SWQCB/CASQA-QSD/QSP). *One substitution per permit cycle.	○	○		○
External training courses* (CASQA, Regional Board, etc.) *Per WPP pre-approval	○	○		○
On-the-job, field training				○
Workshops and demonstrations				○
Material distribution (email updates pamphlets, brochures, promotional incentives, etc.)				○

7.3 EDUCATIONAL OUTREACH ELEMENT

Educational outreach will be developed and implemented based on the following four objectives:

1. Teaching basic awareness;
2. Adapting education to specific target audiences;
3. Clearly describing specific responsibilities under the WPO; and
4. Providing instruction to successfully implement (BMPs, with an emphasis on pollution prevention.

7.3.1 Target Audiences

At a minimum, educational outreach will be tailored to each of the following target communities:

- Municipal departments and personnel;
- New development and construction education;
- Industrial and commercial owners and operators and mobile businesses; and
- Residential, general public, and school children communities;
- Public and municipal departments and personnel involved with the use of pesticides, herbicides and fertilizers;
- Public and municipal departments and personnel involved with the management and disposal of used oil and toxic materials;

Jurisdictional Runoff Management Program

- Audiences identified in the WQIPs to address the highest priority water quality conditions;

7.3.1.1 Municipal Departments and Personnel

County staff that does not fit into the training categories described in Section 7.2.2 will receive general awareness outreach. Municipal educational efforts will inform staff at a basic level about the 2013 MS4 Permit, the differences between stormwater and urban runoff, non-point source pollution, common pollutants and their effects on water quality, and BMPs. Outreach efforts will typically target common behaviors associated with residential activities. Methods that will be utilized to reach this target population include email announcements, newsletters, paycheck inserts, and employee fairs.

7.3.1.2 New Development and Construction Education

The County offers applicants, contractors, developers, property owners, and other new development/construction related parties a number of educational resources. A particularly important interaction is the formal pre-intake assistance offered to project applicants. DPW and PDS inspection staff facilitates pre-construction meetings prior to the commencement of many projects. Efforts typically focus on compliance requirements, while explaining the importance of proper selection, placement and maintenance of BMPs. The County also encourages applicants to take advantage of the educational materials and tools it makes available through its many websites. Community planning groups and planning commissions are also included in educational outreach efforts, and are frequently included within municipal training opportunities.

7.3.1.3 Industrial and Commercial Business Owners and Operators

The County provides educational outreach to all commercial and industrial audiences, as identified in the 2013 MS4 Permit. Education is provided through a variety of means, primarily inspections, permitting, and workshops. Depending on the situation and venue, County staff may provide information on regulatory requirements, discharge prohibitions, BMPs, and pollution prevention.

Many County departments collaborate to provide stormwater outreach to this target population. The departments that assist with educational outreach include the following: Department of Public Works, Department of Agriculture, Weights and Measures, Planning Development Services, Department of Environmental Health, Department of General Services, and the Department of Parks and Recreation.

7.3.1.4 Residential, General Public, and School Children Education

Residential and General Public

The County's educational outreach program utilizes a multi-media approach for reaching residential, general public, and school children. Media types may include print materials (fact sheets, hand books), television, radio, websites, billboards, and promotional items. Educational efforts typically target the common pollutants of concern and their associated activities for the San Diego Region. Location or audience specific events provide an opportunity for tailoring both

Jurisdictional Runoff Management Program

the presentation materials and focusing in on the priority pollutants as described in the WQIP for any specific watershed. Given that bacteria is one of the most common pollutants within San Diego's watersheds, the educational outreach program focuses on bacteria pollutant generating activities, including pet waste management, manure management, and landscape management. Joining efforts with the County Water Authority, the County has been working to collaborate on efforts to reduce water use and over-irrigation. Messages and promotional materials have been tailored to include these messages and to promote the use of native or drought-tolerant plants.

Educational outreach activities for this target population will include community events, fairs, and festivals; clean-up events; and special events. With the County's education first philosophy, residential complaint investigations provide an opportunity to provide direct interaction and explanation about water quality concerns, pollutants, and BMPs.

School Children

Outreach to school children continues to be a priority for the County. Presently, the County contracts with the San Diego County Office of Education's Splash Science Mobile Lab (Splash Lab) and Green Machine. The Splash Lab is a completely self-contained mobile laboratory that brings simulated environmental conditions to school sites for ease and convenience. This enables schools with limited funding and schools within disadvantaged communities to have easy access to water science education. These presentations provide an interactive opportunity to children to learn about stormwater, water quality, bioassessment, watersheds, pollution, and BMPs.

Outreach to high school students is also a continuing program for high schools in the County Unincorporated area. Through a contract with I Love a Clean San Diego (ILACSD), presentations are provided to high school students to further educate the County's youth. Students learn valuable lessons about watershed protection, water quality, pollution prevention, and local watershed issues.

County of San Diego Schools

The County program focuses on school children to increase knowledge and produce long-term behavioral change. Educating school children is essential for promoting stormwater awareness and changing behavior at an early age. By increasing knowledge and awareness, a student's attitude about their own environment will mature, fostering respect and environmental stewardship. School children are a responsive audience, and often become "teachers" bringing home information to parents and carrying out activities learned in the classroom as "the right thing to do." The County reinforces knowledge of stormwater pollution issues through elementary, middle and high school in an effort to establish a foundation for incorporating these changes as a normal part of a person's lifestyle. The County encourages incorporating stormwater concepts into existing curricula.

These concepts include, but are not limited to:

- Being taught the difference between the sanitary sewer vs. the stormdrain system;

Jurisdictional Runoff Management Program

- What a watershed is; and
- Being able to identify the watershed they live in.

Based on 2007 census data, there are approximately 100,533 students between kindergarten and the 12th grade in the County Unincorporated area. See Table 7.4 for student enrollment as an example of the range in the different grade levels from 2000 census data (data unavailable for 2007).

Table 7.4 – Public School Enrollment in the County Unincorporated Area (2000)

Grades	Total Students
Kindergarten through 4	29,921
5 through 8	25,509
9 through 12	25,213
Total	80,643

The County will provide education to the following 13 Elementary School Districts and six High School Districts in the County's jurisdiction:

Elementary School Districts in the County Unincorporated area:

1. Alpine School District
2. Bonsall Union School District
3. Dehesa School District
4. Fallbrook Union Elementary School District
5. Jamul-Dulzura Union School District
6. Julian Union School District
7. Lakeside Union School District
8. La Mesa-Spring Valley School District
9. Rancho Santa Fe School District
10. San Pasqual Union School District
11. South Bay Union School District
12. Spencer Valley School District
13. Vallecitos School District

High School Districts in the County Unincorporated area:

1. Fallbrook Union High School District
2. Grossmont Union High School District
3. Julian Union High School District
4. Mountain Empire School District

Jurisdictional Runoff Management Program

5. San Dieguito Union High School District
6. Sweetwater Union High School District

There are a total of 105 schools in the aforementioned school districts.

The DPW's Planning and Recycling Program with the Department of Environmental Health's (DEH) Household Hazardous Waste Program collaborate to contract with I Love a Clean San Diego to go into the classroom for grades K-12, promoting recycling and encouraging the use of low-toxic substitutes. They reach over 5,000 students annually.

For outreach on watershed pollution prevention to elementary school students, the County contracts with San Diego County Office of Education (SDCOE) to provide two classroom programs, Green Machine for grades K-4 and Splash Lab for grades 4-6. Approximately 95 presentations occur annually, reaching approximately 3,000 students at 60 schools. The presentations reach a minimum of 40 percent of interested elementary schools annually. From year to year, different schools will receive the outreach presentations.

For outreach to high school students in the County Unincorporated area, the County contracts I Love a Clean San Diego to provide watershed presentations on watershed protection, stormwater and urban runoff, pollutants of concern, and the storm drain system. At least twenty percent of the high school students are reached per year through approximately 160 presentations to the high schools in the County Unincorporated area.

To reach students who live in the County Unincorporated area but may attend a school located in an incorporated jurisdiction, there are non-classroom based outreach activities. For non-classroom based activities, students are transported to a venue to receive the education and outreach programs.

- SDCOE and ILACSD conduct outreach activities during special events (e.g., World Water Monitoring Day). During special events, students receive the same presentations available in the classroom. Special events tend to reach a large groups of students from a variety of schools.

The Department of Parks and Recreation (DPR) operates multiple programs at a variety of parks in the County Unincorporated area. The programs are appropriate for different ages K-12. They reach a variety of students from a multitude of schools and school districts. They also provide services for Boy, Girl and Cub Scout troupes. There are approximately one-hundred (100) outreach events annually, reaching thousands of kids and students.

7.3.2 Outreach and Education

Outreach is the central part of all implementation strategies. Various types of outreach can be used to bring about changes in knowledge or awareness in target populations. All residential programs use a wide variety of activities to reach residents throughout the year. Examples of consistently utilized outreach activities include material distribution, workshops, trainings, and

Jurisdictional Runoff Management Program

seminars, community and special events, news releases, and material display (billboards, signs, kiosks, movie theatre slides, etc.). Specific program outreach and education performed are discussed below.

7.3.2.1 Watershed Protection Program

The County's WPP implements an extensive outreach program targeting the residential population. The WPP develops and utilizes a variety of resources to deliver its outreach messages. Branded water quality materials are used for general watershed information and specific residential tip cards, such as manure management and pool, spa, and fountain care and maintenance. Promotional items have been a long standing strategy used to present messages or desirable behaviors. The WPP utilizes pens, pencils, magnets, and rulers, as well as more behavior specific items including dog bag dispensers with bags intended for pet owners to pick up their pet's waste and packages of California poppy seeds to promote the use of native or low maintenance plants. All items contain stormwater messages and the County of San Diego Stormwater Hotline and County's Project Clean Water website. Outreach materials are distributed by County staff during community events and displayed in kiosks at appropriate locations. Additionally, materials are supplied to partner organizations to distribute at their facilities.

The WPP has expanded its outreach program to educate equestrian audiences on manure composting and erosion BMPs specific to horses. The WPP is both staffing and sponsoring workshops and booths throughout the County of San Diego to reach commercial and residential horse owners and enthusiasts. In addition, the WPP collaborated with the Recycling Program and the County Television Network (CTN) to create a 13 minute video titled "How to Manage Manure: Composting for Horse Owners." The target audience for the video was County residents who own or board horses on their properties. Distribution of the full length DVD and equestrian specific tip cards occurs at Equine and Trail Associations and equine-specific community events. Staff is also forming partnerships with equestrian organizations to increase stormwater awareness by providing videos for distribution at their meetings. A shortened version will be aired on the CTN's County Chronicles program. In 2014, WPP developed a comprehensive guide titled "Equine Best Management Practices" and an accompanying "Equine BMP Implementation Manual" to assist horse owners with BMPs appropriate for horse properties.

The WPP has also expanded its outreach to pet owners on the issue of proper disposal of pet waste. WPP staff and contractors such as I Love a Clean San Diego spread information and distribute pet waste bags at pet-focused events. The WPP also is collaborating with Animal Control to distribute pet waste bags at new pet owner adoption events. Surveys are administered at events to collect information on the knowledge and awareness of pet owners and to refine messaging.

The CTN routinely airs various public service announcements (PSAs) and video segments that focus on water quality themes to a countywide cable subscriber base of 725,000 households. In recent years, increased emphasis has been placed on mass media as a tool to continually reinforce

Jurisdictional Runoff Management Program

water messages to the general public. PSAs and video segments are “retired” as new products are introduced in order to keep information current and relevant to the priority pollutants in the County’s watersheds.

7.3.2.2 *Recycling*

The Recycling Program conducts public education and promotes an online referral database <http://www.wastefreesd.org/> and hotline 1-877-R-1-EARTH. The program provides residents with extensive recycling guides, with several available in Spanish (S). They include: Residential, Household Hazardous Waste (S), Automotive (S), Construction and Demolition (S), Apartments and Condos, Junk Mail, Green Waste Recycling Guide, and Sustainable Landscape Practices. These detailed guides are distributed during events and are also available on their website at <http://www.sdcountry.ca.gov/dpw/recycling/guides.html>. Other outreach components of the program include Public Education on Reduce, Reuse, and Recycle by promoting recycling through school presentations, point of purchase displays, public events, and mass media.

7.3.2.3 *Household Hazardous Waste (HHW)*

The County’s HHW Program promotes safe household hazardous material use and disposal, and encourages the use of low-toxic substitutes. HHW are unused or leftover portions of hazardous chemicals and also include Electronic and Universal Waste Recycling. Together with the County’s Recycling Program, HHW promotes the Hotline 1-877-R-1-EARTH for unincorporated residents which provides general information, information on collection facilities and special collection events, as well as promotion of the online database <http://www.wastefreesd.org/>.

7.3.2.4 *Department of Parks and Recreation (DPR)*

DPR provides opportunities for high quality parks and recreation experiences and to preserve regionally significant natural and cultural resources. One key activity in the program is educating the public about the County’s invaluable natural resources. Rangers and volunteers are trained in the Environmental Education program to provide multiple interpretive services to the public, such as wildlife conservation programs with live animals, environmental slide programs, safety talks, ranger-led nature walks, plant propagation program, and community service.

Within DPR, is the Multiple Species Conservation Program (MSCP) a comprehensive long-term habitat conservation program. The MSCP program was developed to comply with the federal Endangered Species Act and the state Natural Communities Conservation Planning Act. MSCP works to preserve San Diego’s unique, native habitats and wildlife for future generations and protect watershed and water quality by targeting 172,000 acres of our natural areas for conservation. It is a unique regional conservation effort that works across political boundaries.

The MSCP staff publishes a quarterly newsletter updating the public on three planning areas, North, South, and East County, as well as other topics relevant to habitat conservation.

7.3.2.5 *University of California Cooperative Extension (UCCE)*

UCCE’s Healthy Garden, Healthy Home (HGHH) is a program giving the residents of San Diego County the opportunity to improve our water resources. As part of this effort, a team of 25

Jurisdictional Runoff Management Program

UCCE San Diego County Master Gardeners have undergone extensive in-depth Integrated Pest Management (IPM) training in order to provide outreach to the San Diego Community. The program creates and disseminates Retail Nursery Newsletters and a Landscape Brochure.

An innovative outreach instrument created by UCCE is the IPM Kiosk that contains information about 50 common home and garden pests, including identification and management, alternatives to pesticides and least toxic pest control, as well as safe use and disposal of pesticides. The kiosk also includes tips related to proper watering, fertilizing, and avoiding problems associated with garden chemicals. Kiosk users can look up a pest by category and name or diagnose a problem on plants. Users can watch videos, print and take home information, as well as locate resources for finding additional pest management help in their county. In addition, the HGHH kiosks have been upgraded to provide users the option of selecting English or Spanish language to reach broader audiences.

7.3.2.6 Hotlines and Websites

Hotline and websites provide residents access to information and opportunities to report complaints. They are discussed in detail within Chapter 8 (Public Participation).

7.3.2.7 Waste Collection and Recycling

A variety of waste collection and recycling services are used to assist residents and businesses in properly disposing of wastes. The County is responsible for these services in the County Unincorporated area and holds numerous events throughout the year.

Recycling holds curbside collection services, drop-off recycling centers, oil recycling services, tire recycling services, compost, yard waste, and animal waste management. In addition, Recycling holds specific one-day recycling events such as free composting workshops and tire recycling day.

HHW supports waste collection from unincorporated residents at facilities located in Chula Vista, El Cajon, Miramar, and Ramona. Like Recycling, one-day collection events are held and take place in residential areas such as local high schools, churches, and road stations.

Jurisdictional Runoff Management Program

8.0 PUBLIC PARTICIPATION

This section describes the steps that will be taken to include public participation in the development and implementation of the County of San Diego's Jurisdictional Runoff Management Program (JRMP).

8.1 INTRODUCTION

The County continues to pursue a program development strategy which actively encourages the participation and input of stakeholders. The County has incorporated an additional requirement per 2013 MS4 Permit Provisions E.7.b (1) and (2), to provide a public participation process for development of the Water Quality Improvement Plan (WQIP) priority water quality conditions, goals and water quality improvement strategies. The County utilizes a variety of means to encourage the public to share in the development and implementation of its JRMP. Many of the venues utilized offer the opportunity for public comment, direct interaction, and feedback.

These include the following:

- Stormwater Copermittee Meetings;
- Integrated Regional Water Management Planning;
- WQIP Development and Update;
- Workshops, Conferences, and Summits;
- Watershed Planning Groups;
- Partnerships with entities such as San Diego Gas and Electric, the San Diego County Water Authority, and the San Diego Zoological Society;
- Regional Stormwater Hotline;
- Project Clean Water website;
- Press Releases, email announcements, and newsletters; and
- Community Events.

Long-term success of the JRMP depends greatly on the degree to which stakeholders can effectively be brought together to reach common goals. Using these and other methods, public participation will continue to be strongly encouraged to ensure that stakeholder interests, concerns, and solutions are considered and addressed. Throughout the MS4 Permit cycle, stakeholder involvement will remain an ongoing priority for the County.

8.2 STORMWATER COPERMITTEE MEETINGS

The County chairs and provides administrative and technical support for the Regional Stormwater Management Committee (Management Committee). The Management Committee coordinates Copermittee activities, develops and implements regional programs, and promotes consistency between programs. Management Committee meetings provide a forum for the discussion of

Jurisdictional Runoff Management Program

shared program development and implementation responsibilities. County staff or contractors produce detailed summaries for each meeting and post them on the Copermittee webpage, Project Clean Water (PCW), at www.projectcleanwater.org.

Each meeting is announced on the PCW webpage and by e-mail, usually two weeks prior to each meeting. The e-mail notification list for Management Committee meetings includes 259 Copermittees and interested parties. Each Management Committee meeting also includes scheduled open floor time to provide participants an opportunity to voice issues and concerns or to make general announcements.

To further facilitate public participation, the County and other Copermittees have voluntarily consented to follow the requirements of the Ralph M. Brown Act, which governs open meetings for local government bodies. Public participation issues specifically addressed by the Brown Act, contained in section 54950 et seq. of the Government Code, include the following¹:

- Public Testimony. The public may comment on agenda items for consideration by the Management Committee. Time must also be set aside for public comment on any other matters under the Management Committee's jurisdiction.
- Taping or Broadcasting. Meetings may be broadcast, audio-recorded, or video-produced so long as the activity does not constitute a disruption of the proceeding.
- Conditions to Attendance. The public may not be asked to register or identify themselves or to pay fees in order to attend public meetings.
- Public Records. Materials provided to a majority of the Management Committee which are not exempt from disclosure under the Public Records Act must be provided, upon request, to members of the public without delay.
- Required Notices and Agendas. An agenda containing a brief general description (approximately twenty words in length) of each matter to be discussed must be posted at least 72 hours prior to each meeting. Additional requirements apply to special and emergency meetings. Exceptions are allowable in the case of emergency circumstances, or where a need for immediate action comes to the attention of the Management Committee after the posting of the agenda.

Brown Act compliance is specified in section III.B.10 of the Copermittees' Memorandum of Understanding (MOU), and is limited to meetings of the Management Committee², subcommittees, and workgroups. Other bodies established by the Management Committee are not subject to this requirement.

¹ Source: California Attorney General's 1994 pamphlet, "The Brown Act: Open Meetings for Local Legislative Bodies."

² Copermittees do not waive their right to take the position that the Brown Act legally does not apply, but voluntarily agree to follow Brown Act procedures for Management Committee meetings.

Jurisdictional Runoff Management Program

8.3 INTEGRATED REGIONAL WATER MANAGEMENT PLANNING

Integrated Regional Water Management (IRWM) planning was formally established in California by the passage of Proposition 50 in November 2002. IRWM planning sets forth a process aimed at securing long-term water supply reliability by first recognizing the inter-connectivity of water supplies and the environment and then pursuing projects yielding multiple benefits for water supplies, water quality, and natural resources. Proposition 50 authorizes \$380 million in general obligation bonds to fund a variety of IRWM Plan-related projects. The IRWM Program is jointly administered by the California Department of Water Resources and the State Water Resources Control Board.

In November 2004, the Copermittees authorized the County to represent the Stormwater Copermittees' Management Committee in the collaborative development of San Diego's IRWM Plan. Through a Memorandum of Understanding, the County Water Authority, County of San Diego, and the City of San Diego formed the Regional Water Management Group (RWMG), which has since funded, guided, and managed the development of the IRWM Plan. In December 2006, a Regional Advisory Committee (RAC) was established to assist in the finalization of the IRWM Plan and prioritization of regional projects for both the Plan and for funding applications. The RAC is comprised of 25 members with expertise in local water supply, wastewater, recycled water, stormwater and urban runoff, natural resources, and environmental stewardship. Members represent environmental groups, academia, agriculture, water quality interests, and regulatory agencies. The RAC meets every other month, and is noticed in the same fashion as the Copermittee meetings, in compliance with the Brown Act.

In 2008, the San Diego IRWM Region was awarded \$25 million of Proposition 50 grant funds for 19 local projects consistent with the IRWM Plan Objectives. In 2011 and 2014, the region was awarded \$34.5 million of Proposition 84 grant funds for 26 local projects, including water supply, water quality, and natural resources projects. With the passing of Proposition 1 in November 2014, an additional \$52.5 is potentially available for the San Diego IRWM Funding Area. Information on the IRWM Program and grants projects is available at <http://sdirwmp.org/>.

8.4 WORKSHOPS, CONFERENCES, AND SUMMITS

Stakeholder input continues to be facilitated through a variety of workshops and conferences. The County conducts workshops, such as those presented on low impact development (LID), Hydromodification, and advances in Best Management Practice (BMP) technologies to educate and obtain feedback from stakeholders. Future workshop topics may include: construction and land development programs, the 2013 MS4 Permit, and the revised Watershed Protection Ordinance. Additionally, over the past six years, an annual Clean Water or Water Conservation Summit has been held to discuss the latest issues in the water quality arena, new regulations, collaboration, and uniting the region on common goals. Focused workshops and conferences will continue to be a focal point of the County's overall strategy for ensuring public participation in the development and implementation of its water quality programs.

Jurisdictional Runoff Management Program

8.5 WATERSHED PLANNING GROUPS

Currently, the County participates in all nine of the watershed planning groups that are operated in cooperation with the respective Copermittee jurisdictions. With the development of the WQIPs, the County works in coordination with the other Copermittee agencies in each watershed management area, as well as the consultation panels convened to assist with the strategies and priorities for each watershed's WQIP. There are also a growing number of private – non-governmental organizations (NGOs) that run watershed groups throughout the region. The County currently participates in many of these groups as well, including, the San Luis Rey Watershed Council, the San Diego River Coalition, the Carlsbad Watershed Network, the Binational Committee for the Tijuana River Watershed, the Santa Margarita Stakeholder group, among others. Watershed planning efforts provide forums for private citizens, government agencies, and business interests to unite in addressing shared concerns within the watershed(s). With public participation, the development of watershed and jurisdictional activities and programs can be focused to addressing the pollutants, water quality, and natural habitat concerns cooperatively. The relationship of these efforts to JRMP development and implementation cannot be overstated since they address complementary objectives and all rely on public participation for success. Through collaboration and partnerships with stakeholders, the County will continue to pursue funding for the development and implementation of activities and plans.

PCW is another venue which provides a means for stakeholders to share data and information regarding local water quality management efforts. PCW provides a means not only of supporting MS4 Permit compliance, but also for improving programs through partnerships and initiatives that reach beyond compliance. This inclusive forum brings the region together to explore water quality issues of regional significance. PCW is comprised of several working groups and advisory committees that discuss issues of shared concern, find consensus solutions to priority problems, and characterize water quality conditions within the region's watersheds.

8.6 PARTNERSHIPS

Aside from the collaboration and partnership among the region's Copermittees, the County has worked toward developing external partnerships in order to leverage the efficiency and effectiveness of its programs. Partnerships with the County Water Authority and the City of San Diego during the development of the IRWM Plan have opened many doors for increased collaborative efforts. New partnerships have been developed and others have been enhanced. Through the IRWM Plan, the County has come to work more closely with the tribal nations, San Diego Coastkeeper, San Diego State University, the Zoological Society of San Diego, and becoming involved with regional groundwater management planning and disadvantaged communities. Given the cross-cutting interests of these and other groups with similar interests, the County has come to realize many benefits including opening the lines of communication between agencies and NGOs. The County intends to continue building on its relationships with external parties and identifying additional opportunities to collaborate and maximize program efficiency.

Jurisdictional Runoff Management Program

8.7 HOTLINE AND WEBSITES

A key element of the County's public participation strategy is to provide accessible resources for obtaining water quality information and reporting complaints. The County continues to operate several hotlines and websites to report complaints.

In accordance with 2013 MS4 Permit section E.2.b.(3)(a), the County will continue to operate a public hotline to facilitate public reporting of illicit discharges or water quality impacts associated with discharges from residences, businesses, and other sources. This hotline is capable of receiving reports in both English and Spanish 24 hours a day seven days per week. The hotline receives calls from a toll-free Regional Stormwater Hotline (1-888-846-0800). All calls are answered by hotline operators, Monday through Friday, 8:00 a.m. - 5:00 p.m. A voice mail message is provided for 24-hour public access in both English and Spanish. Public reporting is also available by accessing the Project Clean Water website's Report Pollution page³, Accela Citizens Access web interface⁴, or by contacting the Department of Public Works (DPW), Watershed Protection Program directly (watersheds@sdcounty.ca.gov). A link to this email address (watersheds@sdcounty.ca.gov) is displayed on the DPW Watershed Protection webpage⁵. All complaint information received is forwarded to the Department of Public Works, Watershed Protection Program staff for routing to the appropriate departments or agencies for follow up and/or investigation.

This hotline number and the website addresses are distributed to the public via brochures, advertisements, and various other outreach methods to encourage them to report complaints. Through its education and outreach program, the County will continue to aggressively market the various contact methods to all target audiences.”

Household Hazardous Waste & Recycling (1-877-R-1-EARTH)

The County contracts with a local environmental non-profit organization that operates a hotline (1-877-R-1-EARTH) which provides residents with information about reuse, recycling, and safe disposal options for a variety of materials including used oil and household hazardous waste. Attendants also refer residents with urban runoff questions to the Regional Stormwater Hotline.

Websites provide an additional way for the public to learn about water quality issues, to report complaints, and to get involved. The County maintains numerous website pages that incorporate general and specific information about common issues, activities, and pollutants. Websites with particular relevance to watershed and water quality issues are listed in Table 8.1. Informational resources typically accessed on these sites include ordinances, educational materials, guidance documents, and links to other sites.

Project Clean Water Website

³ <http://www.projectcleanwater.org>

⁴ <https://publicservices.sdcounty.ca.gov/citizenaccess/>

⁵ <http://www.sandiegocounty.gov/content/sdc/dpw/watersheds.html>

Jurisdictional Runoff Management Program

The Project Clean Water (PCW) website was designed to be a water quality resource for the San Diego Region. Its vision “Clean Water through Local Commitment and Action,” underscores the basic principle that clean water can only be achieved through dedication, commitment, and hard work if the people who live and work in the San Diego Region. This County-initiated effort provides the forum for information sharing to promote regional collaboration and consistency in outreach to maximize results. It also serves disseminate information on watershed and water quality topics. Copermittee workgroup web pages make meeting notices, meeting summaries, and relevant work products available to participants and the public at large. The PCW website also hosts the WQIPs for all watersheds. Lastly, the website provides general watershed information, programs and laws, water management plans, and links to the Healthy Garden / Healthy Homes and Integrated Regional Water Management Planning for the San Diego Region websites.

The County includes a Clean Water Toolbox (<http://www.projectcleanwater.org>) that provides residents and business with useful information on a variety of BMPs. The purpose of this addition was to provide a centralized resource that will support the consistent application of BMPs across the San Diego region. The site provides user-friendly and audience-specific BMP information to a variety of residential and business users. It has an end-user focus and can be searched in several ways. In addition to providing BMP profiles that are specific to users and activities, the site contains links and other resources that assist users in seeking out additional information. Visitors to the residential page are given a selection of BMP options for activities from power washing to lawn and garden care.

County Watershed Protection Website

The WPP website provides County residents with a variety of water quality and compliance resources at the following location: <http://www.sandiegocounty.gov/dpw/watersheds.html>. From the home page, visitors are invited to learn more about BMPs for activities related to horse and livestock care, pool and spa maintenance, yard and lawn care, home improvement, vehicle care, and pet care.

8.8 MEDIA

Other than the hotlines and websites, the County utilizes a variety of means to communicate with the public. This includes the use of press releases, news articles, television announcements, community newsletters, and voter guides (Registrar of Voter’s Sample Ballots). These mechanisms serve as a consistent and ongoing method that will continue to be utilized throughout the MS4 Permit cycle. The combination of these media outlets serves as a means of keeping the public and stakeholders updated on current events and opportunities to participate.

8.9 COMMUNITY EVENTS AND PUBLIC INTERACTION

Community events provide an opportunity for direct interaction with the public. The County participates in a variety of community events, fairs, festivals, etc., that help to inform and educate the public about stormwater pollution prevention, watersheds awareness, water conservation, and water quality concerns for the region. Tools such as tip cards, dust pans, pesticide measuring spoons, reusable shopping bags, and doggie bag dispensers are made available to assist the public with implementing pollution prevention best management practices. These types of events also provide a chance for the public to obtain a better understanding about water resource concerns, as they can ask questions, participate, receive guidance, sign up to receive e-mails for upcoming events, and watch interactive demonstrations such as the non-point source watershed model.

In the County’s day to day operations, County staff directly interacts with the public in a number of ways, providing a chance to raise awareness and encourage personal participation. Much of this interaction occurs as part of regular job duties including complaints, inspections, public presentations and neighborhood visits. These daily interactions that occur provide an important avenue for obtaining direct feedback from residents and business representatives.

8.10 WATER QUALITY IMPROVEMENT PLANS

In accordance with the requirements of the 2013 MS4 Permit, the County has implemented a public participation process for the development of the WQIPs. Consultation Panels have also been formed to provide recommendations for the WQIPs. The intent of this process is to solicit data, information, and recommendations that can be used to develop the priorities identified in the WQIP. As part of this process, the public is notified of opportunities to participate and provide comments.

9.7	Escalated Enforcement and Reporting of Non-Compliant Sites	6

Jurisdictional Runoff Management Program

9.0 ENFORCEMENT RESPONSE PLAN

9.1 INTRODUCTION

The County of San Diego (County) has modified its existing enforcement procedures and grouped them under an Enforcement Response Plan (ERP) as required by the 2013 MS4 Permit. The ERP incorporates the strategies of the Water Quality Improvement Plans (WQIPs) and includes the following general components:

- General Approach to Enforcement
- Routine Illicit Discharge Detection and Elimination Enforcement Component
- Routine Development Planning Enforcement
- Routine Construction Management Enforcement
- Routine Existing Development Enforcement
- Escalated Enforcement and Reporting of Non-Compliant Sites

9.2 GENERAL APPROACH TO ENFORCEMENT

The primary objective of the ERP is to promote voluntary compliance with applicable ordinances and the National Pollutant Discharge Elimination System (NPDES) permit provisions. In cases of noncompliance, the ERP provides County staff with several enforcement tools to ensure a return to compliance in a timely manner while following due process. “Education first” is a key component of the County’s approach to improving water quality. Often a resident or facility operator may not be aware that a particular activity could generate a pollutant that contributes to water pollution. Once the responsible party understands the potential impact of an activity and the appropriate Best Management Practices (BMPs) to prevent a discharge, he or she likely will change the behavior voluntarily. While emphasizing education as the primary means of achieving compliance, the County also has the necessary authority and procedures in place to investigate and enforce in cases of continued noncompliance. The County Administrative Code, Title 1, establishes authority by which the County may use escalated enforcement measures, as described in Section 9.7.

Stormwater violations within the County are to be corrected in a timely manner with the goal of returning to compliance within 30 calendar days, after the violations are discovered, or prior to the next recorded rain event, whichever is sooner. Any correction of a County violation that is not achieved within 30 calendar days will be recorded and tracked by the County along with associated rationale explaining the factors involved with the delay. Properties and activities regulated by additional permits, such as the Industrial General Permit or the Construction General Permit, may require a return to compliance in a shorter period of time, as determined by those permits.

In the event that a violation or potential violation may endanger health or the environment, the County will forego the “education first” approach and proceed immediately to more stringent enforcement measures.

Jurisdictional Runoff Management Program

Attachment B of the 2013 MS4 Permit requires the County to report any noncompliance that may pose a threat to human or environmental health within 24 hours of the County becoming aware of circumstances. Such oral notification must be followed up by a written report and submitted to the Regional Board within 5 calendar days of the incidence of non-compliance as required as part of Attachment B section 1.1.(6) of the 2013 MS4 Permit. For additional information on County reporting procedures, refer to Section 9.7.

9.3 ROUTINE ILLICIT DISCHARGE DETECTION AND ELIMINATION ENFORCEMENT

The County uses field observations, complaints, data and records, as well as sampling to determine the point source location and responsible parties associated with illicit discharges.

The County will carry out enforcement actions as needed to eliminate illicit discharges and connections. The County will conduct an investigation to determine the level of enforcement action necessary for compliance. Progressive enforcement is used to ensure that adequate enforcement is conducted to eliminate the illicit discharge or connection. Some of the factors that influence the selection of appropriate enforcement actions include the threat level and duration of the violation, the cooperation and willingness of the responsible party to correct the conditions, whether the incident is isolated or ongoing/recurring, and whether the violation or potential impacts will have a detrimental effect on human health or the environment. Regardless of the specific enforcement actions pursued, all responsible parties are required to implement corrective actions to address their violations. The routine progressive steps available may include various attempts to communicate measures necessary for compliance. They include:

- An advisory letter sometimes is issued when there is no evidence of an illicit discharge or connection and County staff wants to document that the resident or operator has been notified of his or her BMP responsibilities;
- Verbal warnings are used when a discharge or potential discharge can be easily corrected at the time of investigation or soon afterwards. A follow-up visit may not always be necessary. Educational and outreach materials often are provided to the responsible party.
- A Stormwater Inspection / Corrective Actions Report (CAR) is issued to provide a written notice that corrective action is necessary within a certain period of time. During inspections of regulated facilities, the Inspection Report serves as the CAR. A CAR may also be issued on County letterhead depending on the complexity of the case, e.g., if multiple responsible parties are involved. The period to return to compliance is usually 14 calendar days. Properties and activities regulated by additional permits, such as the Industrial General Permit or the Construction General Permit, may require a return to compliance in a shorter period of time, as determined by those permits. In cases of immediate threat to health or the environment, a cease-and-desist can be issued with a follow-up time of 24 hours. In less urgent cases, the responsible parties may be given 30 calendar days to comply if time is needed to properly plan and implement BMPs, e.g.,

Jurisdictional Runoff Management Program

such as structural controls. As field staff conduct investigations, they will maintain records and a database of relevant information for each incident. This information is entered into a database that is used for annual reporting. Annually, the County will submit a summary of the prohibited non-stormwater discharges and connections investigated and eliminated within its jurisdiction.

See Section 9.7 for additional detail on escalated enforcement measures.

9.4 ROUTINE DEVELOPMENT PLANNING ENFORCEMENT

Section 67.810, 67.811 & 67.812 of the WPO establishes requirements for the review and approval of development plans, as well as the acceptable mechanisms used to ensure appropriate maintenance and performance of BMPs. Routine development planning measures used to enforce NPDES provisions include:

- Written or verbal plan-check comments to correct minor noncompliance issues on a permit application or during the design approval process.
- Bond and security deposit requirements for BMPs.
- For instances in which plan-check comments are not addressed to the satisfaction of staff, or in which appropriate financial security is not provided, the County maintains the option to deny the issuance of a construction or occupancy permit.

See Section 9.7 for additional detail on escalated enforcement measures.

9.5 ROUTINE CONSTRUCTION MANAGEMENT ENFORCEMENT

9.5.1 County Permitted (Private) Construction Projects

For County permitted construction projects, the County's inspectors will conduct enforcement of stormwater pollution prevention requirements. The County's construction management enforcement program is designed to accomplish the following goals:

- To educate the regulated community;
- To promote voluntary compliance of the laws and regulations within the regulated community;
- To penalize violators, as appropriate, and to deprive violators of any significant benefit gained from violations;
- To prevent any business from having an unfair business advantage through non-compliance; and
- To treat similar facility owners and operators equally and consistently with regard to the same types of violations.

The routine progressive enforcement steps that apply to the construction management element are:

Jurisdictional Runoff Management Program

- **Administrative Warnings** - A common initial method of requesting corrective action and enforcing compliance is a written warning from the County's inspector to the contractor. Written warnings are often sufficient to achieve correction of the violation, often while the inspector is present at the construction site. The inspector will notify the contractor of the violation, and document the violation and the notification in the inspection file. A specific time frame for correcting the problem and a follow-up inspection date will be documented by the inspector. In judging the degree of severity, the inspector will also take into account any history of similar or repeated violations by the same contractor at this or other sites. The inspector is encouraged to contact his or her supervisor by telephone if there are questions as to the appropriateness of issuing an Administrative Warning. The inspector will notify their supervisor immediately of any documented discharges or serious erosion problems. The inspector will complete a written inspection report within two working days of the incidence of noncompliance, and must include evidence such as notes, photographs, and log sheets for use in any enforcement action. Site specific non-compliance issues are input into a database for tracking purposes.
- **Notice of Violation** - If the deficiency noted in an Administrative Warning is not corrected by the next inspection or the severity of the violation is such, that an additional written warning is not strong enough, a written Notice of Violation (NOV) will be issued describing the infraction that is to be corrected and the time frame for correction and for a follow-up inspection. A copy of the notice will be given to the owner or developer and placed in the active inspection file. If the violation has been corrected to the satisfaction of the inspector, the inspector will document compliance in the inspection file. The inspector is encouraged to contact his or her supervisor by telephone if there are questions as to the appropriateness of issuing a NOV. The inspector will notify their supervisor immediately of any documented discharges or serious erosion problems. The inspector will complete a written inspection report within two working days of the incidence of noncompliance, and must include evidence such as notes, photographs, and log sheets for use in any enforcement action. Site specific non-compliance issues are input into a database for tracking purposes.

The County of San Diego, Department of Planning and Development Services and the Department of Public Works, Watershed Protection Program (DPW WPP) will notify the Regional Water Quality Control Board (Regional Board) by e-mail at Nonfilers_R9@waterboards.ca.gov within 5 calendar days when staff becomes aware of a site that does not have a Construction General Permit.

See Section 9.7 for additional detail on escalated enforcement measures.

Jurisdictional Runoff Management Program

9.5.2 County CIP and Other Public Construction Projects

The County of San Diego requires contractors that are hired to construct public works projects to determine and implement BMPs to maintain compliance with applicable NPDES provisions and the Watershed Protection Ordinance (WPO). Adherence with contract documents such as Erosion and Sediment Control Plans, Stormwater Pollution Prevention Plans (SWPPPs), and project specifications is confirmed by inspection staff of the department for which the construction is being done and enforced as necessary by standard payment provisions, liquidated damage clauses, and other means. Examples of standard contract documents are available for review upon request.

See Section 9.7 for additional detail on escalated enforcement measures.

9.6 ROUTINE EXISTING DEVELOPMENT ENFORCEMENT

Existing development, including municipal facilities, must meet the requirements set out in the WPO.

Industrial, commercial, municipal, and residential inspections will be conducted to identify point sources for potential pollutants that may negatively impact water quality. Field observations, complaints, and sampling are also used to determine the location of point source pollution, as well as the identity of responsible parties.

Routine existing development enforcement measures include the progressive steps outlined in Sections 9.2 and 9.3. See Section 9.7 for additional detail on escalated enforcement measures.

The DPW WPP will notify the Regional Board by e-mail at Nonfilers_R9@waterboards.ca.gov within 5 calendar days when staff becomes aware of an industrial facility that has not obtained coverage under the statewide Industrial General Permit (IGP).

9.6.1 Enforcement within Existing Residential Areas

The lead for NPDES enforcement and compliance within existing residential areas is the WPP. The routine steps available to the WPP include the education-first and progressive steps outlined in Sections 9.2 and 9.3, respectively.

Regardless of the specific enforcement actions pursued, all responsible parties are required to implement corrective actions to address their violations. See Section 9.7 for additional detail on escalated enforcement measures.

9.6.2 Enforcement of Structural BMP Performance within Existing Development Areas

The DPW WPP inspects structural BMPs and responds to complaints about structural BMPs, privately or publicly maintained. Adequate enforcement or administrative action must be utilized to ensure a return to compliance (adequate BMP maintenance and certification) by the responsible party.

Jurisdictional Runoff Management Program

Private Sites - Structural BMPs may be deemed non-functional and not in compliance with County ordinance. In addition to “education first” measures described in Section 2, the County will utilize the following enforcement tools, where appropriate, non-compliance of privately maintained structural BMPs:

- An advisory letter sometimes is issued when there is no evidence of an illicit discharge or connection and County staff wants to document that the resident or operator has been notified of his or her BMP responsibilities;
- Verbal warnings are used when a discharge or potential discharge can be easily corrected at the time of investigation or soon afterwards. A follow-up visit may not always be necessary. Educational and outreach materials often are provided to the responsible party.
- A Stormwater Inspection Report / Corrective Actions Report (CAR) is issued to provide a written notice that corrective action is necessary within a certain period of time. A CAR may also be issued on County letterhead depending on the complexity of the case, e.g., if multiple responsible parties are involved. The period to return to compliance is usually 14 calendar days. Properties and activities regulated by additional permits, such as the Industrial General Permit or the Construction General Permit, may require a return to compliance in a shorter period of time, as determined by those permits. In less urgent cases, the responsible party may be given 30 calendar days to comply if time is needed to properly plan and implement BMPs, e.g., such as structural controls.
- Clean-up and Abatement Notices (in which the County cleans or repairs the structural BMP and then charges the Responsible Party).

As field staff conducts investigations, they will maintain records and a database of relevant information for each incident. This information is entered into a database that is used for annual reporting.

See Section 9.7 for additional detail on escalated enforcement measures.

Special District or County as Responsible Party - The WPP will prepare and issue an Administrative Report of Non-Compliance (ARNC) and submit this report to the appropriate upper management personnel of the County division with direct oversight of the BMP. The report will request a response of corrective actions, with pertinent supporting documentation, to be submitted in a timely manner to the WPP by the appropriate manager. All ARNCs must be made readily available to the Regional Board on request.

9.7 ESCALATED ENFORCEMENT AND REPORTING OF NON-COMPLIANT SITES

Escalated Enforcement is defined as the steps used to gain compliance with the NPDES permit in reducing the adverse effect of polluted run-off discharges to receiving waters. It includes any enforcement scenario in which a violation or situation of non-compliance is causing or contributing to the highest priority water quality conditions identified within the County’s

Jurisdictional Runoff Management Program

WQIPs. In the small percentage of cases where the “education first” or other routine measures are not successful in achieving compliance, escalated enforcement may begin. Use of Administrative Citation Warnings (ACWs), Stop Work or Cease and Desist Orders, and Administrative Citations (ACs) are among the most commonly used methods for escalated enforcement.

The first step in the escalated enforcement process will begin with an ACW, and may be issued to the responsible party with clean-up and BMP requirements. An ACW can also be issued in complaint cases following non-compliance with an NOV or CAR. More than one ACW may be used during this stage of escalated enforcement depending on the details of the enforcement case. For example, if a responsible party is making progress in correcting deficiencies but needs more time to complete the corrections then another ACW may be used. Stop Work/Cease and Desist Orders are similar options available to the County for escalated enforcement.

The second step for escalated enforcement is to issue an AC with escalated fines. The escalated fines progress from \$100, \$200, \$500, and \$1000 per violation up to a total of \$10,000. More than one AC may be used during this stage of escalated enforcement depending on the details of the enforcement case. For example, if a responsible party is making progress in correcting violations but needs more time to complete the corrections then another AC may be used.

Another option for escalated enforcement in egregious situations is to issue a civil penalty that may be an alternative to the citation steps. If there is a scenario where none of these options results in compliance, the case may be referred to the Environmental Crimes Task Force for potential criminal prosecution under the State Porter Cologne Water Quality Act or the Federal Clean Water Act. The County WPO provides further detail regarding administrative, civil, and criminal options for escalated enforcement. Refer to the following:

- SEC. 67.814. Enforcement
- SEC. 67.815. Violations - Criminal Penalties
- SEC. 67.816. Violations - Public Nuisance
- SEC. 67.817. Violations - Denial of Subsequent Permits and Occupancy
- SEC. 67.818. Violations – Injunctive or Declaratory Relief
- SEC. 67.819. Violations – Civil Penalties
- SEC. 67.820. Violations – Cost Recovery
- SEC. 67.821. Notice of Ineligibility for Land Development

Depending upon land use and the County department that is responsible for enforcement, minor differences and additional options are available as progressive steps in escalated enforcement.

Attachment B of the 2013 MS4 Permit requires the County to report any noncompliance that may pose a threat to human or environmental health within 24 hours of the County becoming aware of circumstances. Such oral notification must be followed up by a written report and submitted to

Jurisdictional Runoff Management Program

the Regional Board within 5 calendar days of the incidence of non-compliance as required as part of Attachment B section 1.1.(6) of the 2013 MS4 Permit.

The County of San Diego will notify the Regional Board by e-mail within 5 calendar days of issuing escalated enforcement action against a site that poses a significant threat to water quality as a result of non-compliance with applicable permits, ordinances, or NPDES provisions.

Jurisdictional Runoff Management Program

10 FISCAL ANALYSIS COMPONENT

This section describes the County's general strategy for conducting fiscal analyses of its Jurisdictional Runoff Management Program (JRMP) related expenditures. Detailed budgets will be included in each of the County's JRMP Annual Reports.

10.1 FISCAL ANALYSIS METHODS

The County's current approach to conducting and reporting on an annual Fiscal Analysis is updated from that first presented in the Fiscal Year (FY) 2006-07 JURMP Annual Report. Per the 2007 MS4 Permit section G, the County worked with other Copermittees to collaboratively develop a *Standardized Method and Format for Annually Conducting and Reporting Fiscal Analyses of Copermittee Urban Runoff Management Programs*. The County has modified its fiscal analyses and began conducting them in accordance with this standardized method starting in January 2010 (i.e., for the FY 2008-09 reporting period). Estimated costs are spread over several County departments, based on their different functions and responsibilities. Tables 10.1, 10.2, and 10.3 show the major categories over which costs are projected, the departments and programs that share these costs, and the sources of funding the County anticipates using to secure the resources necessary to meet its Permit obligations. As shown, expenditures are projected according to four broad categories:

- Jurisdictional (Table 10.1);
- Watershed (Table 10.2);
- Regional (Table 10.3); and
- Total

The County will continue funding its programs through a combination of the following revenue sources:

- General Fund;
- Flood Control District Fees;
- Developer Deposits and Fees;
- Gas Tax (TransNet);
- Sanitary District Fees;
- Environmental Trust Fund;
- Airport Enterprise Funds;
- Agricultural Registration and Inspection Fees;
- Solid Waste Franchise Fees;
- Environmental Health Permit Fees;
- County Service Areas (CSAs); and

Jurisdictional Runoff Management Program

- Community Development Block Grants.

Legal restrictions on the use of these funding sources are as follows.

General Fund. There are no restrictions on the use of general fund for County water quality programs and activities except that they must be used only for the purposes for which they are budgeted and allocated by the County Board of Supervisors.

Flood Control District Fees. Revenue generated from these fees must be expended for activities related to flood and stormwater management.

Developer Deposits / Permit Fees. Deposits and fees may be used only to fund activities related to the work for which the permits are issued.

Gas Tax. The Gas Tax is collected by the state and allocated to local government for transportation-related work including maintenance of existing transportation systems (e.g. roadway sweeping, culvert cleaning) and construction of new transportation facilities. These funds may not be used for other purposes.

Sanitary District Fees. Sanitary District Fees are used for work related to the maintenance of sewer lines, pump stations, force mains, and several treatment plants that serve the County Unincorporated areas of Alpine, Julian, Lakeside, Spring Valley, Pine Valley, Campo, East Otay Mesa, and the Winter Gardens area. They may be used only for maintenance-related purposes within the respective sewer district within which they are collected.

Other Funding Sources. Because other funding sources collectively account for a relatively small portion of ongoing expenditures, legal restrictions on their use are not discussed further here. However, all funding for the County’s stormwater compliance programs is expended within applicable legal restrictions and limitations.

Table 10.1 – Overview of Jurisdictional Program Costs and Funding Sources

Program Element		Projected Funding Sources ¹	Description
1. Administration			
1	DPW Administrative Activities	General fund	These costs correspond to the development, administrative oversight, and assessment of the County’s stormwater programs. The DPW WPP is responsible for the development of new and augmented County stormwater programs, regulatory reporting, and program assessment.

¹ Actual funding sources may vary by fiscal year.

Jurisdictional Runoff Management Program

Program Element		Projected Funding Sources ¹	Description
2	DPR Administrative Activities	General fund	This group coordinates all training requirements, reviews reports, prepares reports, conducts inspections, manages budgets and oversees the overall implementation of the Stormwater Program for DPR.
2. Development Planning Component			
a. Land Use Planning			
3	PDS Advance Planning	General Fund	While stormwater is addressed in the General Plan Update and policy projects as appropriate; costs are spread amongst a myriad of other issues.
b. Environmental Review			
4	PDS Project Planning	Developer deposits and fees	This reflects PDS oversight review for CEQA inclusion.
c. Development Project Approval and Verification			
Private Projects			
5	DPW Private Development Review	Developer deposits and fees	This cost primarily covers plan reviews for permitted sites. Total costs are estimated as fixed percentages of annual plan-checking fees.
6	PDS Building		
Public Projects			
7	DPW Capital Improvements	Gas tax; Flood control fees; Airport enterprise fund; Transnet; Parks and Recreation; FHWA; Community development block grants; Prop 1B	Capital improvement costs include: preparing plan specifications and estimates for stormwater BMPs; BMP inspections during construction; implementation of construction phase BMPs
8	DPW Sanitary Sewer Capital Improvements	Sanitary district fees	Capital improvement costs include implementation of post-construction phase BMPs.
9	DPR Capital Improvements	General fund; County service area; Developer deposits and fees; Community development block grants	Capital improvement costs include: preparing and reviewing plans and specifications for stormwater BMPs; SWPPP/WPCP review and BMP compliance inspections during construction; implementation of construction phase BMPs and post-construction BMPs.

Jurisdictional Runoff Management Program

Program Element		Projected Funding Sources ¹	Description
10	DGS Capital Improvements	General fund	Costs associated with the DGS Capital Improvement Plans (capital and major maintenance projects) include: staff training/education; preparing plans, specifications and estimates for stormwater BMPs; and, implementation of post-construction BMPs.
3. Construction Component			
a. Private Projects			
11	DPW Private Development Inspection	Developer deposits and fees	This cost primarily covers construction inspections at permitted sites. Total costs are estimated as fixed percentages of annual plan-checking and inspection program fees.
12	PDS Building Inspection		
b. Public Projects			
13	DPW Capital Improvements	Gas tax; Flood control fees; Airport enterprise fund; Transnet; Parks and Recreation; FHWA; Community development block grants; Prop 1B	Capital improvement costs include: preparing plan specifications and estimates for stormwater BMPs; BMP inspections during construction; implementation of post-construction BMPs.
14	DPW Sanitary Sewer Capital Improvements	Sanitary district fees	Capital improvement costs include: preparing plan specifications, design, estimates, BMP inspections during construction, and implementation of construction BMPs.
15	DPR Capital Improvements	General fund; County service area; Developer deposits and fees; Community development block grants	Capital improvement costs include: preparing and reviewing plans and specifications for stormwater BMPs; SWPPP/WPCP review and BMP compliance inspections during construction; implementation of construction phase BMPs and post-construction BMPs.
16	DGS Capital Improvements	General fund	Costs associated with the DGS Capital Improvement Plans (capital and major maintenance projects) include BMP inspections and oversight during construction.

Jurisdictional Runoff Management Program

Program Element		Projected Funding Sources ¹	Description
5.0 Existing Development Component			
a. Industrial and Commercial Component			
29	DPW Watershed Protection Program	General fund	This group conducts inspections of commercial, and industrial facilities in the County Unincorporated area, responds to complaints, and conducts follow-up and enforcement of stormwater violations.
30	AWM Compliance and Enforcement	Registration and inspection fees	This group regulates the activities of several categories of high priority commercial facilities and activities, including nurseries and greenhouses, golf courses, cemeteries, agricultural and structural pest control businesses, , and botanical gardens. Specific activities conducted include: planning, inspections, investigations, outreach, compliance assistance enforcement activities, and reporting.
		General fund	
b. Municipal Component			
17	DPW Watershed Protection Program	General fund	This group inspects County owned and maintained facilities and provides guidance on compliance issues.
Streets, Roads, Highways, and Parking Facilities Element			
18	DPW Road Operations	Gas tax	Funded road operations activities include: culvert inspections and cleaning; increased culvert waste disposal costs; street sweeping; installation and maintenance of BMPs at road structures.
MS4 Element			
19	DPW Flood Control MS4 Maintenance Program	Flood Control Tax	This includes salary and benefits for staff to perform maintenance on a wide variety of flood control facilities throughout the County Unincorporated area. The cost also includes equipment such as vehicles and other mechanical devices needed for maintenance activities. Expenditures such as environmental permit fees, disposal fees, and contract work are included as well. The majority of the expenditures are spent on debris removal and vegetation management in natural bottom channels.

Jurisdictional Runoff Management Program

Program Element		Projected Funding Sources ¹	Description
20	DPW Flood Control	Flood control fees	This cost includes the conversion of existing concrete lined channels to natural bottom channels, and increased maintenance of flood control systems.
Solid Waste Facilities Element			
21	DPW Landfill Compliance	Environmental Trust Fund	These costs involve site inspections at inactive landfills, burn sites and buffer properties for BMP implementation. For landfills, the cost also includes sampling/chemical analyses of stormwater samples, annual reporting, and maintenance of BMPs.
Wastewater Facilities Element			
22	DPW Sanitary Sewer BMP Program	Sanitary district fees	This includes costs associated with operation and maintenance of the sanitary sewer system such as leak detection monitoring and replacement of high-risk sewer lines. It also includes the cost of inspecting wastewater treatment facilities and implementing and maintaining BMPs at those sites.
Road Stations Element			
23	Includes: Division 1 and Division 2 Stormwater Crews; Division 1 and Division 2 Headquarters, and; all individual road stations	Gas Tax	Funded road operations activities include installation and maintenance of BMPs at road station facilities, staff training, plan development and maintenance, and recordkeeping.
Fleet Maintenance Element			
24	DGS Fleet Maintenance	General Fund	Fleet oversees fuel sites and shops which includes the implementation of BMPs, inspections, sweeping, spill kits and training for DGS and DPW employees

Jurisdictional Runoff Management Program

Program Element		Projected Funding Sources ¹	Description
Municipal Airfields Element			
25	DPW Airport Compliance	Airport enterprise fund	These costs involve site inspections at airports and inactive landfills for BMP implementation. For landfills, the cost also includes sampling/chemical analyses of stormwater samples, annual reporting, and maintenance of BMPs.
Parks and Recreational Facilities Element			
26	DPR Facilities BMP Program	General fund	This covers costs associated with implementation of BMPs at County parks.
		County Service Area	
Office Buildings and Other Municipal Facilities Element			
27	DGS Facilities BMP Program	General fund	The DGS Facilities Maintenance BMP Program conducts a variety of stormwater activities including: inspections and clean-up of County-owned, occupied, and leased facilities and vacant lands; maintenance and signage of storm drain inlet inserts and trash dumpsters; placement of inlet filters; maintenance of coverage and containment improvements for onsite supplies and materials; parking lot sweeping and controlled parking lot power washing; and application of erosion and sediment control measures.
Pesticides, Herbicides, and Fertilizer Management Element			
28	AWM Pesticide, Herbicide, and Fertilizer Management	General Fund	The Integrated Pest Control Program within the AWM performs eradication and control of invasive weeds. This program also produces rodent bait and provides weed control on roadsides, airports, flood control channels, sewage treatment plants and inactive landfills. AWM also provides structural pest control to facilities owned and operated by the County.
		Internal Agreements	
c. Residential			
31	DPW Watershed Protection Program	General fund	This group coordinates and provides outreach to the residential sector and schoolchildren in support of Permit Section D.5 requirements.

Jurisdictional Runoff Management Program

Program Element		Projected Funding Sources ¹	Description
32	DPR Community Outreach	General fund	Funded activities include planning and conducting environmental outreach to schools, training teachers and students on water quality monitoring, leading students on hikes, and planning and conducting clean-up events.
33	DEH Community Outreach	Solid waste franchise fees	Funded activities include: planning and conducting HHW collection events, and overseeing operation of permanent HHW facilities; developing pollution prevention content and providing direct outreach to various target audiences including builders and developers; preparing maps and conducting GIS analysis of environmental data; and integrating water quality elements into environmental health programs.
34		Environmental health permit fees	
35	DPW Watershed Protection Program	General fund	This group conducts complaint investigations of residential sources in the County Unincorporated area, operates a regional hotline, and conducts follow-up and enforcement of stormwater violations.
36	DPR Compliance and Enforcement	General fund	DPR enforces stormwater requirements at County parks.
		County Service Area	
7. Illicit Discharge Detection and Elimination Component			
37	DPW Watershed Protection Program	General fund	This group is responsible for developing and conducting monitoring programs, assessing scientific data, and providing technical and scientific support to County program staff. This group also provides support for all technical and scientific aspects of development and implementation.

Jurisdictional Runoff Management Program

Table 10.2 – Overview of Watershed Program Costs and Funding Sources

Program Element	Funding Sources	Description
DPW Watershed Management	General fund	These costs are associated with the DPW Watershed Planning Section. This group is the County lead on most watershed-related activities and programs required under Permit Section E. It is responsible for watershed planning activities in the County, including the Water Quality Improvement Plans.
DPW Watershed Planning	General fund	These costs include the analysis of engineering-related watershed activities, assessment of watershed BMPs, and MS4 and sewer mapping by DPW staff.
DPW Watershed Structural BMPs	Grants	The County's watershed planning programs require the construction and maintenance of regional treatment BMPs. These devices will serve a wide area and address the water quality concerns of businesses, municipalities, and residences. These costs cover both the construction and maintenance of BMPs.

Jurisdictional Runoff Management Program

11	EFFECTIVENESS ASSESSMENT COMPONENT.....	1
11.1	Introduction.....	1
11.2	Effectiveness Assessment Approach.....	1

Attachment 11.1 – Water Quality Improvement Plan Goals (April 2015)

11 EFFECTIVENESS ASSESSMENT COMPONENT

11.1 INTRODUCTION

The overall goal of the Effectiveness Assessment Component is to describe a strategy for assessing the County's urban runoff management activities. This strategy will address particular areas of activity for the Jurisdictional Runoff Management Program (JRMP) with an objective of supporting evaluation and periodic adaptation of Water Quality Improvement Plans (WQIPs).

11.2 EFFECTIVENESS ASSESSMENT APPROACH

JRMP components will be coordinated with WQIP targets and strategies during reporting and assessment to ensure that the objectives of each are mutually supportive. This will include the following general components:

- Receiving Water Monitoring and Assessment,
- MS4 Monitoring and Assessment,
- Development Planning Component (Section 3),
- Construction Component (Section 4),
- Existing Development Component (Section 5), and
- Illicit Discharge Detection and Elimination Component (Section 6).

Assessments of individual program components will include a variety of outcome types as applicable to the specific objectives of each, and as described in *A Strategic Approach to Planning for and Assessing the Effectiveness of Stormwater Programs* published by the California Stormwater Quality Association (CASQA) in February 2015. "Outcomes" are measurable endpoints associated with programs, people, and physical systems. They are the building blocks of the management approach described by CASQA. Outcomes establish the measurability and structure needed to successfully complete the various tasks conducted during the planning, implementation, and assessment of stormwater management programs. Because multiple outcomes must typically be considered when planning and assessing programs, it's helpful to place them within a logical and understandable context as described by CASQA. Figure 11.1 illustrates this framework, and provides general examples of the types of outcomes associated with each level.

As shown, outcomes are grouped according to six categories. Starting with Level 1 and moving sequentially toward Level 6, they represent a general progression of conditions that are assumed to be related in a sequence of causal relationships. That is, conditions at any one level may influence conditions at the next highest level. For example, knowledge and awareness (Level 2) in target audiences will likely influence their behaviors (Level 3). The County will use the general CASQA framework to guide the planning and assessment of its programs.

Jurisdictional Runoff Management Program

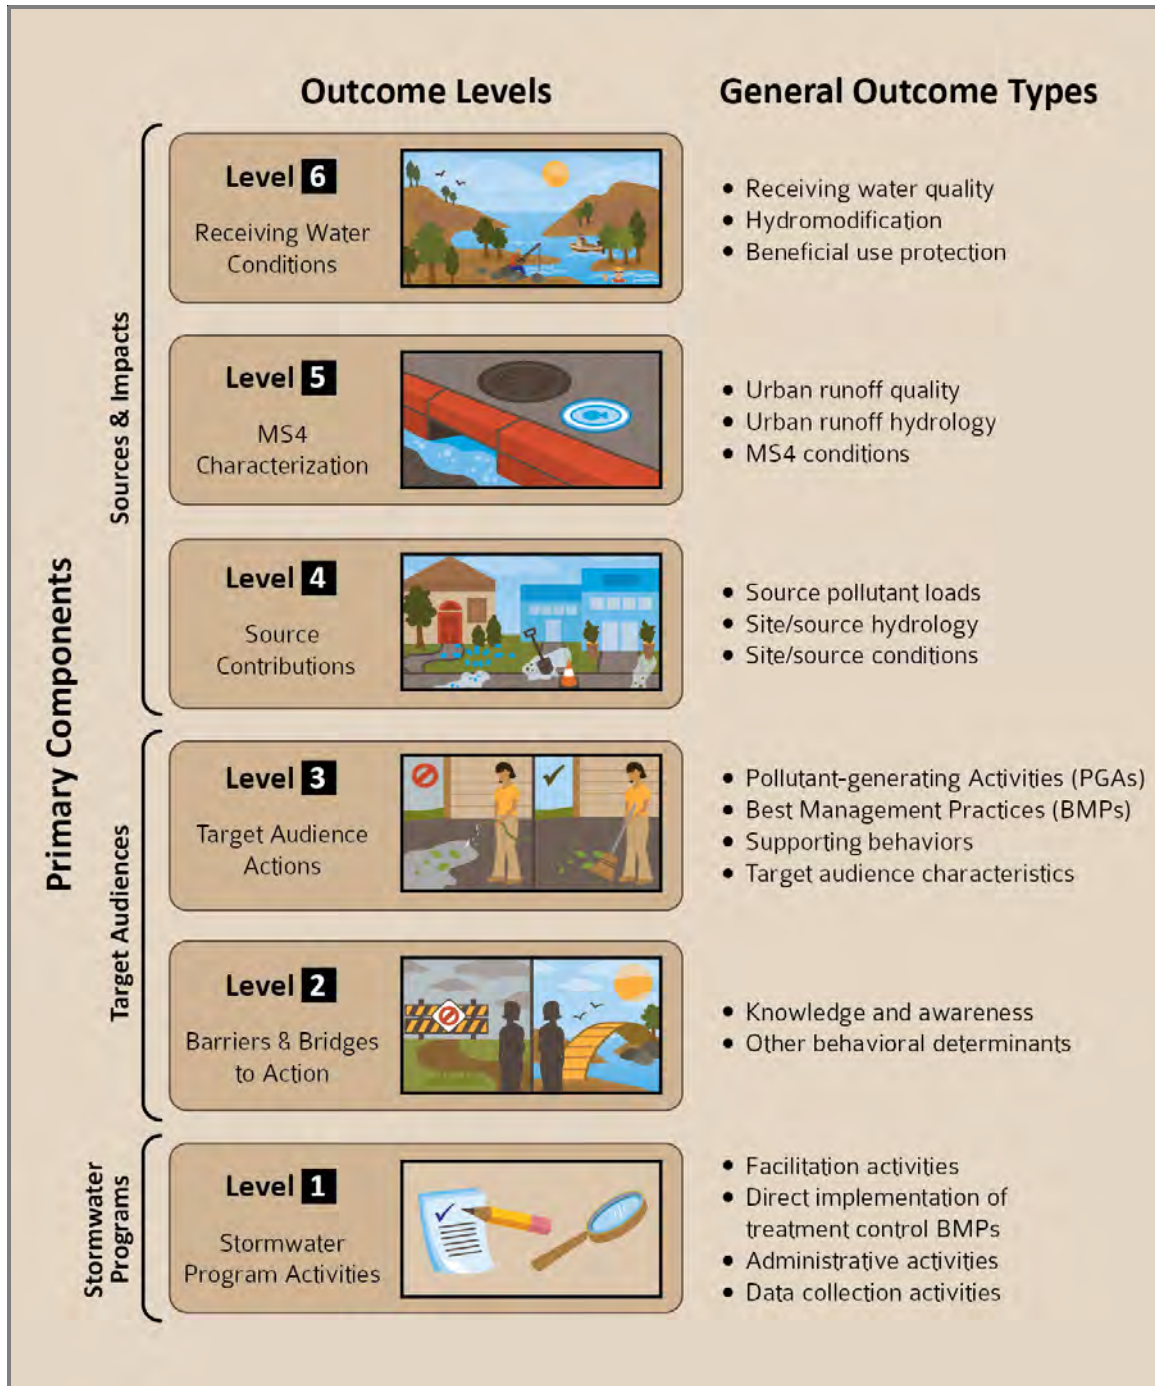

Figure 11.1: CASQA Outcome Levels and Examples (Source: A Strategic Approach to Planning for and Assessing the Effectiveness of Stormwater Programs, CASQA February 2015)

Monitoring programs typically apply to outcome levels 5 (MS4s) and 6 (receiving waters). Changes to the level 5 and 6 monitoring and assessment program will be described as applicable in WQIP Annual Reports. Changes in assessment requirements for JRMP elements will be identified as applicable to the Assessment Component of the JRMP or other implementing plans and reports.

Jurisdictional Runoff Management Program

Each WQIP identifies specific long-term goals for its respective Watershed Management Area (WMA). Interim WMA targets for the current MS4 Permit cycle (i.e., through FY 2017-18) are also identified. WQIP goals are typically established for receiving waters (level 6) and MS4s (level 5). These conditions are periodically assessed through the County's monitoring programs. Changes to monitoring programs will be described as applicable in WQIP Annual Reports. Assessment of identified source components occurs as part of the ongoing implementation and review of JRMP elements. As applicable, results of JRMP assessments will also be used to describe progress in meeting WQIP goals. Changes in assessment requirements for JRMP elements will be identified as applicable to the Assessment Component of the JRMP or other implementing plans. Collectively, each of these assessment elements will inform an iterative approach to adapt the WQIPs, monitoring and assessment programs, and JRMP to become more effective toward achieving compliance with the provisions of the MS4 Permit.

Attachment 11.1 identifies WQIP goals for each WMA. The term "dry weather flows" excludes groundwater, other exempt or permitted non-stormwater flows, and sanitary sewer overflows. The Carlsbad WMA's expressed numeric goal is only for the Escondido Creek Hydrologic Subarea (HSA). Other targeted outcomes have been identified in the San Marcos HSA. Refer to the current WQIPs for specific goal-related criteria.

Attachment 11.1 – Water Quality Improvement Plan Goals (April 2015)

Table 11-1. County of San Diego - WQIP Goals for all Watersheds (April 2015)

Watershed	Condition & Title	Metric	Baseline	Outcome	1st Permit Term Goal
San Luis Rey	Dry - Eliminate anthropogenic dry weather flows from storm drain outfalls	% reduction of flow volume or number of outfalls with persistent flows	To be established FY 15-16 using dry weather flow measurements	Effectively eliminate anthropogenic dry weather flow from storm drain outfalls to receiving water	Reduce by 20% the aggregate flow volume or the number of persistently flowing outfalls during dry weather
	Wet - Implement WQIP with focus on programmatic BMPs and use adaptive management to increase effectiveness	% bacterial load reduction	3,835 x 1012 MPN during Water Year 1993	Reduce baseline bacteria loads by 10% from storm drain outfalls to meet TMDL required load reductions	Implement programmatic (non-structural) BMPs to achieve reduction of bacteria loads from the storm drain outfalls
	Wet - Structural BMPs (as needed and as funding is available)	% bacterial load reduction for structural BMP implementation based on quantitative model	3,835 x 1012 MPN during Water Year 1993	Reduce baseline bacteria loads by 1.7% from storm drain outfalls to receiving water to meet TMDL required load reduction	Reduce bacteria load by 0.3% from distributed BMPs constructed between 2003 and 2009 during redevelopment
Carlsbad¹	Dry - Effectively eliminate anthropogenic dry weather flows from storm drain outfalls	Effectively eliminate one outfall with persistent flow each permit term	Seven major storm drain outfalls with persistent flows in 2014	Effectively eliminate anthropogenic dry weather flow from major storm drain outfalls to receiving water	Effectively eliminate anthropogenic flows from one persistently flowing outfall
San Dieguito	Dry - Eliminate anthropogenic dry weather flows from storm drain outfalls	% reduction of flow volume or number of outfalls with flows mitigated from persistently flowing storm drain outfalls	To be established FY15-16 using dry weather flow measurements	Effectively eliminate anthropogenic dry weather flow from storm drain outfalls to receiving water	Reduce by 20% the aggregate flow volume or the number of persistently flowing outfalls during dry weather
	Wet - Implement WQIP with focus on programmatic BMPs and use adaptive management to increase effectiveness	% bacterial load reduction	TBD in FY 15-16 in MPN/yr from TMDL model	Reduce baseline bacteria loads by 7.7% from storm drain outfalls to meet TMDL required load reductions	Implement programmatic (non-structural) BMPs to achieve source reduction of bacteria loads from the storm drain outfalls
	Wet - Structural BMPs (Optional: as needed and as funding is available)	% bacterial load reduction	TBD in FY 15-16 in MPN/yr from TMDL model	Reduce baseline bacteria loads from storm drain outfalls to receiving water if needed to meet TMDL required load reduction	Reduce by TBD in FY 15-16 % bacteria load from distributed BMPs constructed between 2003 and 2009 during redevelopment

¹ Goal applicable only for the Escondido Creek HSA. See the Carlsbad WMA WQIP for additional goals.

Watershed	Condition & Title	Metric	Baseline	Outcome	1st Permit Term Goal
Los Penasquitos	Dry - Effectively eliminate anthropogenic dry weather flows from storm drain outfalls	Routine observations of storm drain outfalls to verify the absence of discharge to receiving water	Verify the absence of flow from storm drain outfalls in 2014 & 2015	Effectively eliminate anthropogenic dry weather flow from storm drain outfalls to receiving water.	Verify the effective elimination of anthropogenic dry weather flow from storm drain outfalls and use programmatic approaches to maintain compliance
	Wet - Implement WQIP with focus on programmatic BMPs and use adaptive management to increase effectiveness	% bacterial load reduction.	TBD in FY15-16 using TMDL model	Reduce baseline bacteria loads by 2% from storm drain outfalls to meet TMDL required load reductions.	Implement programmatic (non-structural) BMPs to achieve source reduction of bacteria loads from the storm drain outfalls
		% Sediment load reduction or verify allowable tons of sediment per year is met for the County's jurisdiction in Los Penasquitos WMA	83.6 tons/yr using 2003 water year	43.9 tons/yr 47.6% reduction of baseline loads or verify allowed loads of 39.7 tons/yr is met in 2034	Implement programmatic (non-structural) BMPs to achieve reduction of sediment loads from the storm drain outfalls.
	Restoration of Lagoon (as needed and as funding is available)	Restoration of 346 acres of Saltmarsh	262 acres of tidal/non-tidal salt marsh	Restoration of 346 acres of tidal/non-tidal saltmarsh	Coordinate with watershed partners to determine restoration goals and establish monitoring protocols, as applicable.
San Diego River	Dry - Eliminate anthropogenic dry weather flows (1) from storm drain outfalls	% reduction of flow volume or number of outfalls with persistent flows	To be established FY 15-16 using dry weather flow measurements.	Effectively eliminate anthropogenic dry weather flow from storm drain outfalls to receiving water.	Reduce by 20 % the aggregate flow volume or the number of persistently flowing outfalls.
	Wet - Implement WQIP with focus on programmatic BMPs and use adaptive management to increase effectiveness	% bacterial load reduction	1,727 x 1012 MPN during Water Year 2003	Reduce baseline bacteria loads by 10 % from storm drain outfalls to meet TMDL required load reductions.	Implement programmatic (non-structural) BMPs to achieve source reduction of bacteria loads from the storm drain outfalls.
	Wet - Structural BMPs (as needed and as funding is available)	% bacterial load reduction based on quantitative model	1,727 x 1012 MPN during Water Year 2003	Reduce baseline bacteria loads by 24.7% from storm drain outfalls to receiving water to meet TMDL required load reductions.	Reduce by 1% the baseline bacteria loads from distributed BMPs constructed between 2003 and 2009 during redevelopment.

Watershed	Condition & Title	Metric	Baseline	Outcome	1st Permit Term Goal
San Diego Bay	Wet - County Facility Retrofits for Reduction in Bacteria and Metals			Retain and treat parking lot runoff to a biofiltration basin and redirect roof downspouts to pervious area (Central Regional Public Health Center retrofitted)	Treat 20,000 square feet of parking lot runoff through Installation of Pervious Pavement Over Infiltration Basin (Southeast Family Resource Center retrofitted)
	Dry - Effectively eliminate anthropogenic dry weather flows from storm drain outfalls.	Measured by % reduction of flow volume or number of outfalls with persistent flows	To be established FY 15-16 using dry weather flow measurements		Reduce by 20% the aggregate flow volume or the number of persistently flowing outfalls during dry weather.
Tijuana	Wet - Implement WQIP with focus on programmatic BMPs and use adaptive management to update strategies to increase effectiveness	% Reduction of Total Suspended Solids (TSS) reduction. TSS is being used as a surrogate for sediment.	294 mg/L of TSS	Reduce baseline TSS loads by 20% (235 mg/L)	(up to 5% FY18) Implement programmatic (non-structural) BMPs to achieve source reduction of TSS loads from major storm drain outfalls.

Jurisdictional Runoff Management Program

12.0 MODIFICATIONS TO THE JRMP

Since this document is intended as a comprehensive update to the Jurisdictional Runoff Management Program (JRMP) revised by the County of San Diego (County) in 2010, it goes beyond the types of incremental change that can be summarized in a concise way. Explanations of previous JRMP modifications are spread throughout several annual reports and previous versions of the JRMP. The interested reader is referred to the individual sections of this updated JRMP, where there are clear descriptions of how the County's proposed activities, programs, and approaches comply with the minimum requirements of the new Permit.

Jurisdictional Runoff Management Program

13.0 CONCLUSIONS AND RECOMMENDATIONS

Based on experience gained through implementing programs as required by the previous Municipal Separate Storm Sewer System (MS4) Permit, the County of San Diego (County) has updated its Jurisdictional Runoff Management Program (JRMP) to both improve stormwater programs and to meet the new requirements. Under the new Permit, the County has revised a number of programs and developed new ones to improve departmental communications and provide interdepartmental structure. The County will continually assess and refine these programs as needed to meet an ever expanding infrastructure and to protect the environment and human health. By continually improving programs and implementing all necessary Best Management Practices (BMPs), the County can effectively reduce or eliminate pollutant runoff from the areas and activities discussed in this JRMP document. The County will continue to collaborate with other jurisdictions to develop methods to foster and assess long-term success in regional water quality improvement.
